1 PRODUCT DESCRIPTION

- Variety of design options concerning size, colour, shape, illumination, connection or lettering
- especially ideal for use in harsh environments
- high reliability, long lifetime with more than 30 mill. actuations
- no maintenance costs, since no mechanical wear parts
- easy to clean due to a tightly closed surface (IP 69K)

1.1 Functional Description: NO Switch

The piezo switch is based on the functional principle of the piezoelectric crystal. The action of force on the piezo disk causes a voltage to be induced due to a charge transfer. The voltage generated is converted by the electronic connection into a polarity-neutral, electronic switch contact. During the voltage drop, the electronic switch contact is closed for the specified pulse duration. After this, the electronic switch contact opens again, even if the force is still present. The period that the electronic switch contact remains closed depends on the actuating speed and force as well as on the duration of actuation.

Diagram of an NO switch:

The piezo disk is connected to the terminals 1 and 2. The electric circuit to be switched is connected at the terminals 3 and 4. This can be either direct voltage (DC) or alternating voltage (AC). If a pulse is applied to the piezo disk, terminal 1 becomes positive in relation to terminal 2 due to the voltage generated. The integrated switching element controls the electric circuit to be switched.

In the neutral position of the piezo switching element, the terminals 3 and 4 are non-conductive, and initial contact resistance is greater than 10 MOhm. When the piezo disk is actuated, the initial contact resistance is reduced to less than 20 Ohm.

When actuating the piezo disk, the resistance between terminals 3 and 4 is therefore changed from high resistance → low resistance → high resistance.

This corresponds in principle to the function of a conventional **NO pushbutton switch**.

Changes that contribute to technical improvement are subject to alternations.

1.2 Functional Description: Illumination

Ring Illumination

Single or bi-colored ring illumination is possible for the PSE switches. When equipped with two colors, it is possible to either switch between the colors or to achieve a combination color, depending on the type of activation.

For example: Diodes of group 1 = red and diodes of group 2 = green

Only group 1 is activated	→	Ring has red illumination
Only group 2 is activated	→	Ring has green illumination
Both groups are activated at the same time	→	Ring has orange illumination

Red cable	=	Supply voltage: red LEDs
Green cable	=	Supply voltage: green LEDs
Black cable	=	Minus for all LEDs
White cable	=	Switch contact

[Terminal layout](#) see page 14 section 2.4 Switching Symbols Illumination

Special type 5 VDC upon request

Point Illumination

When illuminating the PSE switch, either a single-color LED (2 pins) is used or a bi-colored LED (3 pins). If a single-color LED is used, cable No. 2 is not needed (see section 2.4 Switching Symbols: Illumination – Point Illumination).

Switching between colors can be achieved by appropriate activation.

Changes that contribute to technical improvement are subject to alternations.

2 TECHNICAL DATA AND DIMENSIONAL DRAWINGS

2.1 Technical Data

Electrical Data		
Switching Voltage max.	(VAC/DC)	42/60
Switching Current max.	(mA)	100
Rated Breaking Capacity	(W)	1
Lifetime (at Rated Breaking Capacity)	(Mio.)	20
Switch resistance off (OFF=not actuated)	(MΩ)	>10
Switch resistance on (Ta=25°C) (ON=actuated)	(Ω)	<20
Capacity	(nF)	5
NO Pulse Time (depending on the actuating force, time and speed)	(ms)	20-1000
Contact Configuration		polarity-free
Switch Function		NO switch

Mechanical Data		
Actuating Force (at ambient temperature)	(N)	≤3 ¹⁾
Actuating Travel	(mm)	0.002
Torque	(Nm)	2.5
IK Protection Class	(IK)	02

Climatic Data		
Operating Temperature	(°C)	-40 to +85
Storage Temperature	(°C)	-40 to +85
IP Degree of Protection Front Side hose water (1m water column) (IEC/DIN/EN 60529)	(IP)	67
IP Degree of Protection Front Side submerged (DIN 40050-9:1993 High-pressure cleaning test)	(IP)	69K
Degree of Protection DIN EN 60069-2-30 Db (Moist heat (air test with 55°C / 93% humidity))		front side / rear side

¹⁾ At temperatures lower than -10°C, the actuating force increases 2- to 4-fold.

Material (Individual Part)	Material ²⁾
Housing (depending on type)	Stainless Steel
	Anodized aluminum
	Polyamide
Actuating Area / Insert (with ring illumination)	Stainless steel
	Anodized aluminum
Illuminated Ring (with ring illumination)	Polyamide

²⁾ *When using the switch in a saline or chloric environment, special materials must be used. Items available upon request.*

2.2 Component dimensions

2.2.1 M16 Series with Finger Guidance

with Pins

with Crimp Terminal male

with AMP ¹⁾

Legend:

- A = Illumination Area
- B = Actuating Area

5 QUALIFICATION TESTS

5.1 IP Protection Class

IP Protection Class IEC/DIN/EN 60529	front side	IP 67
IP Protection Class DIN 40050-9:1993 (High-pressure steam jet cleaning test)	front side	IP 69K
DIN EN 60068-2-30 Db (moist heat (air test with 55°C / 93% humidity))	front side / back side	

5.2 IK Protection Class

Tested centrally

IK Protection Class DIN EN 50102	IK 02
----------------------------------	-------

5.3 Salt-Spray Test

Salt-spray test according to DIN 50021- SS
24h, 48h and 96h test duration

After 8h, the start of corrosion may be discerned; after 96h, this corrosion has spread across large areas of the switch.

This surface corrosion may be removed under running water.

5.4 Hygienic Switches for Food Processing Equipment

The PSE switches meet the requirements for food processing equipment:

DGUV test certificate FW 11 040

As housing material, stainless steel is recommended for use in food processing equipment.
At the final equipment, the installation position for switches with anodized aluminum housing may not be located above the food area.

Changes that contribute to technical improvement are subject to alternations.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)
