

# +3.0V to +5.5V, 125Mbps to 266Mbps Limiting Amplifiers with Loss-of-Signal Detector

## ABSOLUTE MAXIMUM RATINGS

(SUB, GND tied to ground)

V <sub>CC</sub> , V <sub>CCO</sub> .....	-0.5V to +7.0V
FILTER, RSSI, IN+, IN-, CZP, CZN, SQUELCH, LOS+, LOS-, INV, VTH, OUT+, OUT- .....	-0.5V to (V <sub>CC</sub> + 0.5V)
PECL Output Current (OUT+, OUT-, LOS+, LOS-) .....	50mA
Differential Voltage Between CZP and CZN.....	-1.5V to +1.5V
Differential Voltage Between IN+ and IN- .....	-1.5V to +1.5V

Continuous Power Dissipation (T<sub>A</sub> = +70°C)

20-Lead Thin QFN (derate 16.9mW/°C above +70°C).....	1349mW
20-Pin QSOP (derate 6.7mW/°C above +70°C).....	500mW
Operating Temperature Range .....	-40°C to +85°C
Operating Junction Temperature Range (die) .....	-40°C to +150°C
Processing Temperature (die) .....	+400°C
Storage Temperature Range .....	-65°C to +160°C
Lead Temperature (soldering, 10s) .....	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS – MAX3964ACEP/MAX3968CEP

(V<sub>CC</sub> = +3.0V to +5.5V, PECL outputs terminated with 50Ω to (V<sub>CC</sub> - 2V), T<sub>A</sub> = 0°C to +70°C, unless otherwise noted. Typical values are at V<sub>CC</sub> = +3.3V and T<sub>A</sub> = +25°C.) (Note 1)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS

## **Typical Operating Characteristics (continued)**

(MAX3964A EV kit,  $V_{CC} = +3.3V$ , decibels (dB) calculated as  $20 \log \Delta V$ , PECL outputs terminated with  $50\Omega$  to  $(V_{CC} - 2V)$ ,  $T_A = +25^\circ C$ , unless otherwise noted.)

# +3.0V to +5.5V, 125Mbps to 266Mbps Limiting Amplifiers with Loss-of-Signal Detector

## Pin Description

**MAX3964A/MAX3968**

PIN		NAME	FUNCTION
QSOP	THIN QFN		
1	19	SQUELCH	Squelch Input. The squelch function disables the data outputs by forcing OUT- low and OUT+ high during a loss-of-signal condition. Connect to GND or leave unconnected to disable. Connect to V <sub>CC</sub> to enable squelching.
2	20	V <sub>TH</sub>	Output of Internal Op Amp that Sets Loss-of-Signal Threshold Voltage (Figure 1). Connect a resistor from V <sub>TH</sub> to INV and from INV to ground (minimum resistance 100kΩ) to program the desired threshold voltage.
3	1	INV	Inverting Input of Internal Op Amp that Sets Loss-of-Signal Threshold Voltage (Figure 1). Connect a resistor from V <sub>TH</sub> to INV and from INV to ground (minimum resistance 100kΩ) to program the desired threshold voltage.
4	2	FILTER	Filter Output of Full-Wave Logarithmic Detectors (FWDs). The FWD outputs are summed together at FILTER to generate the received-signal-strength indicator (RSSI). Connect a capacitor from FILTER to V <sub>CC</sub> for proper operation.
5	3	RSSI	Received-Signal-Strength Indicator Output. The analog DC voltage at RSSI indicates the input signal power. The RSSI output is reduced approximately 120mV when LOS+ is asserted.
6	4	IN-	Inverting Data Input
7	5	IN+	Noninverting Data Input
8	—	SUB	Substrate. Connect to ground.
9, 10	6, 7, 8	GND	Ground
11	9	CZP	Auto-Zero Capacitor Input. Connect a capacitor between CZP and CZN to determine the offset-correction-loop bandwidth.
12	10	CZN	Auto-Zero Capacitor Input. Connect a capacitor between CZP and CZN to determine the offset-correction-loop bandwidth.
13	11	V <sub>CCO</sub>	Output Buffer Supply Voltage. Connect to the same potential as V <sub>CC</sub> , but filter V <sub>CCO</sub> and V <sub>CC</sub> separately.
14	12	OUT+	Noninverting PECL Data Output. Terminate with 50Ω to (V <sub>CC</sub> - 2V).
15	13	OUT-	Inverting PECL Data Output. Terminate with 50Ω to (V <sub>CC</sub> - 2V).
16	14	LOS-	Inverting Loss-of-Signal Output. LOS- is asserted low when input power drops below the LOS threshold. This pin is PECL compatible and should be terminated with 50Ω to (V <sub>CC</sub> - 2V).
17	15	LOS+	Noninverting Loss-of-Signal Output. LOS+ is asserted high when input power drops below the LOS threshold. This pin is PECL compatible and should be terminated with 50Ω to (V <sub>CC</sub> - 2V).
18	16	V <sub>CCO</sub>	MAX3964A/MAX3968: This pin can be left open or connected to the positive supply.
19, 20	17, 18	V <sub>CC</sub>	+3.0V to +5.5V Supply Voltage
—	EP	Exposed Pad	Connect the exposed pad to board ground for optional electrical and thermal performance.

# +3.0V to +5.5V, 125Mbps to 266Mbps Limiting Amplifiers with Loss-of-Signal Detector

Figure 1. Functional Diagram

## Detailed Description

The MAX3964A contains a series of limiting amplifiers and power detectors, offset correction, data-squelch circuitry, and PECL output buffers for data and loss-of-signal (LOS) outputs. The MAX3968 provides PECL LOS outputs with data outputs suitable for 266Mbps. Figure 1 shows a functional diagram of the MAX3964A/MAX3968.

### Limiting Amplifiers

A series of four limiting amplifiers provides gain of approximately 65dB.

### Power Detector

Each amplifier stage contains a full-wave logarithmic detector (FWD), which indicates the RMS input signal power. The FWD outputs are summed together at the FILTER pin where the signal is filtered by an external capacitor (CFILTER) connected between FILTER and VCC. The FILTER signal generates the RSSI output voltage, which is proportional to the input power in decibels. When LOS+ is low, VRSSI is approximated by the following equation:

$$V_{RSSI} (V) = 1.2V + 0.5 \log (V_{IN})$$

where  $V_{IN}$  is measured in mVp-p.

This relation translates to a 25mV increase in VRSSI for every 1dB increase in VIN (25mV/dB). The RSSI output is reduced approximately 120mV when LOS+ is asserted.

### PECL Outputs

The data outputs (OUT+, OUT-) and the MAX3964A/MAX3968 loss-of-signal outputs (LOS+, LOS-) are supply-referenced PECL outputs. Standard PECL termination at each output of 50Ω to (VCC - 2V) is recommended for best performance.

### Input Offset Correction

A low-frequency feedback loop around the limiting amplifier improves receiver sensitivity and powerdetector accuracy. The offset-correction loop's bandwidth is determined by an external capacitor (CAZ) connected between the CZP and CZN pins.

The offset correction is optimized for data streams with a 50% duty cycle. A different average duty cycle results in increased pulse-width distortion and loss of sensitivity. The offset-correction circuitry is less sensitive to variations of input duty cycle (for example, the 40% to 60% duty cycle encountered in 4B/5B coding) when the input is less than 30mVp-p.

## +3.0V to +5.5V, 125Mbps to 266Mbps Limiting Amplifiers with Loss-of-Signal Detector

### Loss-of-Signal Comparator

The LOS comparator indicates when the input signal power is below the programmed LOS threshold. To ensure supply and temperature independence,  $V_{TH}$  is generated by a 1.2V bandgap reference. The op amp's external gain-setting resistors ( $R_1$  and  $R_2$ ) can be chosen to set  $V_{TH}$  between 1.2V and 2.4V. To ensure chatter-free operation, the LOS comparator is designed with approximately 5dB of hysteresis.

### Squelch

The squelch function disables the data outputs by forcing OUT- low and OUT+ high during a LOS condition. This function ensures that when there is a loss of signal, the limiting amplifier (and all downstream devices) does not respond to input noise or corrupt data. Connect SQUELCH to GND or leave it unconnected to disable squelch. Connect SQUELCH to  $V_{CC}$  to enable data squelching.

### Applications Information

#### Program the LOS Threshold

Figure 2 provides information for selecting the LOS threshold voltage ( $V_{TH}$ ). If  $R_1$  is 100k $\Omega$  and if the responsivities of the photodiode and preamplifier are known, then the value of  $R_2$  can be selected from Figure 2 to provide LOS assert at the desired input power.

#### Select Capacitors

A typical MAX3964A/MAX3968 implementation requires four external capacitors ( $C_{AZ}$ ,  $C_{FILTER}$ , and two input coupling capacitors). For all applications up to 266Mbps, Maxim recommends the following:

$$C_{AZ} = 1\mu\text{F}$$

$$C_{FILTER} = 10\text{nF}$$

$$C_{IN} = 4700\text{pF}$$

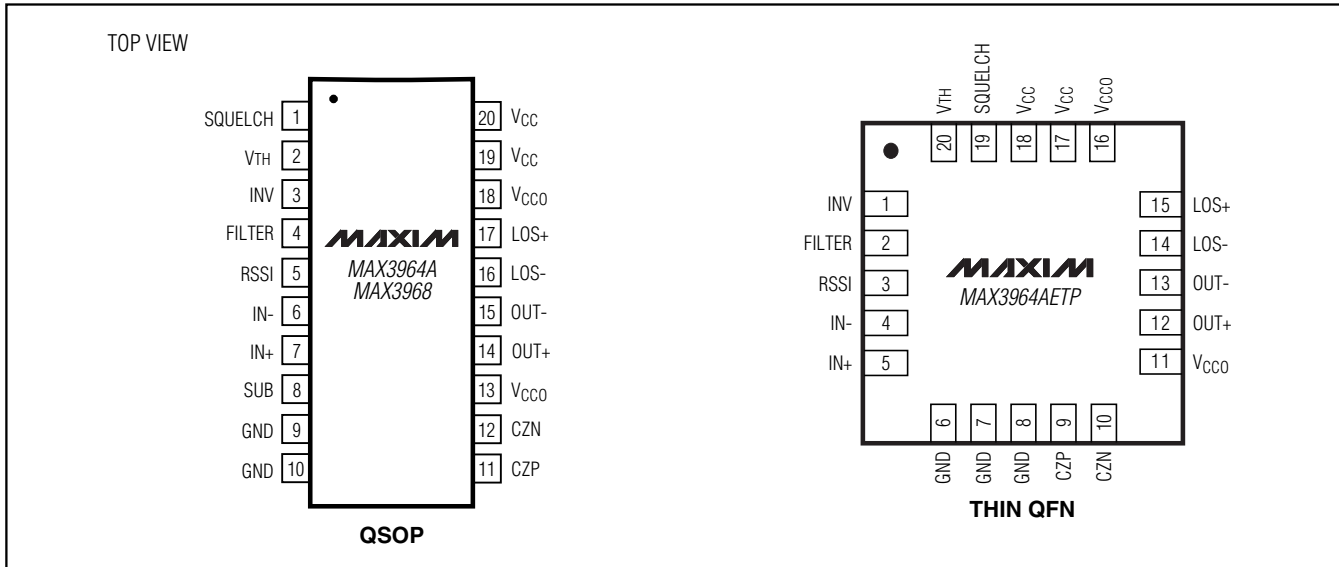

Figure 2. LOS Assert Programming Resistor vs. LOS Assert Power (for Various PIN-TIA Gains)

#### Wire Bonding

For high-current density and reliable operation, the MAX3964A series uses gold metalization. Diepad size is 4mils square with a 6mil pitch. Die thickness is 15mils.

# **+3.0V to +5.5V, 125Mbps to 266Mbps Limiting Amplifiers with Loss-of-Signal Detector**

## **Pin Configurations**

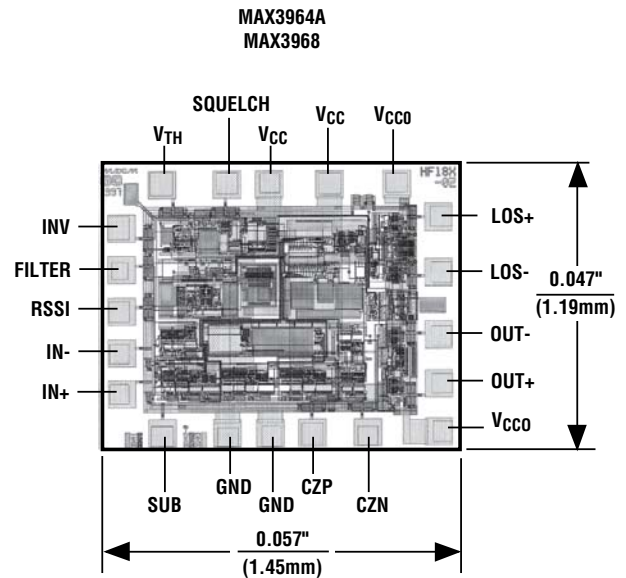

### **Selector Guide**

PART	DATA RATE (Mbps)	LOS OUTPUTS
MAX3964A*	125 to 155	PECL
MAX3968	125 to 266	PECL

\*The MAX3964A is functionally equivalent to MAX3964, but offers slightly improved ESD tolerance. The MAX3969 is a recommended upgrade for the MAX3964, MAX3964A, and MAX3968.

### **Chip Topography**

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
