

High performance wireless components integral to enabling wireless connections and communications; embedded into a wide range of products.

**6 MHz – 2.6 GHz**

**SMALL SIZE**

**LOW COST**

**LOW POWER CONSUMPTION**

All RFM SAW Resonators are RoHS compliant.

**SAW Resonators (pages 26-28).** Low-power SAW resonators are used as frequency control elements in transmitter and receiver LO circuits. These components are essential to the miniature radio frequency transmitters and receivers that enable a variety of wireless consumer, automotive, industrial, medical and commercial applications. RFM manufactures reliable, high performance, low-cost components in a variety of small surface-mount packages as well as the traditional TO39 "metal can" package.

**SAW Narrowband Front-End Filters (pages 29-30).** The use of narrowband SAW filters has become a necessity in a variety of wireless links. RFM SAW coupled resonators filter components are used as narrowband front-end filters for receivers to reject strong out of band signals. RFM has an extensive offering of low-cost, rugged, narrowband SAW front-end filters in a broad range of frequencies and a variety of small packages. These low-cost front-end filters exhibit excellent rejection characteristics, low insertion loss and superior temperature stability.

All RFM SAW Narrowband Front-End Filters are RoHS compliant.

All RFM SAW RF/IF Filters are RoHS compliant.

**SAW RF/IF Filters (pages 31-36).** RFM filter products includes a variety of standard and custom bandpass filters for radio frequency (RF), intermediate frequency (IF) and other applications. The operating frequencies of these filters range from 40 MHz to 2.6 GHz. These filters are available in a variety of leaded and surface-mount packages. RFM also custom designs and manufactures SAW delay lines and notch filters.

**Frequency Control (pages 37-38).** RFM Frequency Control products include a broad array of devices:

- SAW-stabilized Optical Timing Clocks and Diff-Sine Wave Clocks and Oscillators in a wide range of operating frequencies between 200 MHz and 1.8 GHz. These frequency sources exhibit very low phase noise and jitter. They have tolerances of 100 ppm basic stability, or the ability to phase lock to high-stability system clocks.
- A variety of tiny, high performance Crystal-based devices used in both time and frequency domain applications.

All RFM Frequency Control products are RoHS compliant.

RFM provides a large selection of SAW resonators in a broad range of frequencies from 300 MHz to over 1 GHz. These products are designed to be the frequency control elements in transmitters and receiver local oscillators. Their use allows reduced receiver bandwidths, which results in improved sensitivity and immunity to interference. Tighter center frequency tolerances are becoming popular especially in Europe. RFM can provide tolerances down to  $\pm 50$  kHz. These quartz-stabilized devices ensure maximum temperature performance in a variety of applications.

**Applications**

- Automotive keyless entry
- Tire pressure monitoring
- GPS receivers
- Wireless point-of-sale terminals
- Data link equipment
- Peripherals
- High Performance Computing
- Remote bar code data entry
- Bar code readers
- Identification tags
- Home automation
- Door and gate openers
- Personal and home security
- Automated meter reading
- Consumer sports

**Packaging and Minimum Order Quantities.** RO resonator products are packaged in both TO39 leaded packages and a variety of surface-mount packages (SMT). The TO39 packaged resonators are shipped in antistatic shipping tubes with a quantity of 50 pieces per tube.

The SMT packaged resonators are shipped in tape and reel with 500 units in 7" tape and reel, and 3,000 or 4,000 units on 13" tape and reel. Resonators are sold by the tape and reel. Contact a sales rep, distributor, or stocking rep / distributor near you to request samples or your evaluations and / or prototype designs. For package options, see RF COMPONENTS PACKAGE SELECTION GUIDE on page 39.

RFM is currently manufacturing both the TO39 and SMT versions of one-port resonators in high volumes.

**Port Type.** The SAW Resonator product family includes one (Single Port) and two port (Dual Port) types. The RO series is a line of true single-port devices with a lumped element model that is similar to that of a bulk crystal device. Single-port resonators are typically used in modified Colpitts oscillator configurations where the resonator is connected between the base of a transistor and ground.

All RFM SAW Resonators are RoHS compliant.

RFM provides a large selection of low-loss narrowband front end filters for all major frequencies used in low-power unlicensed communications equipment from 300-1000 MHz. Coupled resonator filter technology is used in the RF series of components. These devices are used as narrowband front-end filters to reject strong out-of-band signals.

Typical bandwidths are 600-900 kHz with typical ultimate out-of-band rejection of 50 dB. Special rejection is provided at key points such as -10.7 MHz for local oscillator rejection and -21.4 MHz for the image spurious response in typical superhet receivers.

Optimum implementation of this filter technology is accomplished when the filter is matched on both input and output ports. This matching is typically a simple inductor-capacitor network. In addition to matching, careful attention to circuit board layout is also important to achieve optimum filter performance.

All RFM SAW RF / IF Filters are RoHS compliant.

RFM retains a long history of providing stable, SAW based frequency control products for computer timing, communications, test instrumentation and military applications. In addition, RFM manufactures optical timing products based on our patented "Diff Sine" technology to meet the increasing demand for bandwidth in communication systems. These products have been specifically developed for applications such as dense wave division multiplexing (DWDM) equipment where timing integrity and elimination of system noise in circuits are critical.

The OP4005B and OP4005B-1 are both 622.08 MHz differential clocks with near perfect symmetry and extremely low jitter with or without noise on the power planes. The OP4006B is a 666.5 MHz Clock for forward error correction timing. RFM's "Diff Sine" architecture is the basis of each of these high performance optical products.

The OPB series along with the SCB series Clocks are also used for timing on ultra high speed A to D converter applications and other digital radio applications.

### Applications

- Digital communication systems
- High performance analog and digital radios
- Air Traffic Control (ATC) and Traffic Collision Avoidance Systems (TCAS)
- IFF interrogators & transponders, instruments
- Point-to-point microwave communications systems
- GPS systems

**Packages and Minimum Order Quantities.** Frequency Control products are packaged in dual-in-line package (DIP) and surface mount (SMC) packages. The DIP packaged parts are shipped in antistatic box with a minimum quantity of 30. The SMC packaged parts are shipped via tape and reel with minimum quantity of 500 for a 7" reel.
