

## **Microprocessor Monitor**

#### **Features**

- · Precision Voltage Monitor
  - Adjustable +4.5V or +4.75V
- Reset Pulse Width 250 msec minimum
- · No External Components
- · Adjustable Watchdog Timer
  - 150 msec, 600 msec or 1.2 sec
- Operating Voltage 4.0V to 5.5V
- Debounced Manual Reset Input for External Override

#### **Block Diagram**

#### **General Description**

The TC1232 is a fully-integrated processor supervisor that provides three important functions to safeguard processor sanity: precision power on/off reset control, watchdog timer and external reset override.

On power-up, the TC1232 holds the processor in the reset state for a minimum of 250 msec after  $V_{CC}$  is within tolerance to ensure a stable system start-up.

Microprocessor sanity is monitored by the onboard watchdog circuit. The microprocessor must provide a periodic low-going signal on the  $\overline{ST}$  input. Should the processor fail to supply this signal within the selected time-out period (150 msec, 600 msec or 1200 msec), an out-of-control processor is indicated and the TC1232 issues a processor reset as a result.

The outputs of the TC1232 are immediately driven active when the PB input is brought low by an external push button switch or other electronic signal. When connected to a push button switch, the TC1232 provides contact debounce.

The TC1232 is packaged in a space-saving 8-Pin PDIP or SOIC package, a 16-Pin SOIC (wide) package and requires no external components.

#### **Package Types**

#### **Device Features**

	R	ST pin		RST pin		T . D	Minimum	WDI Input	
Device	Туре	Pull-up Resistor	Active Level	Туре	Active Level	Trip Points (Max)	Reset Active Time (ms)	Typical Timeouts (ms)	MR Input
TC1232	Open-drain	External	Low	Push-pull	High	4.75V or 4.5V	250	150, 600 or 1200	Yes

# 1.0 ELECTRICAL CHARACTERISTICS

#### **Absolute Maximum Ratings†**

Voltage on Any Pin (With Respect to GND)
.....-0.3V to +5.8V

Operating Temperature Range:

C-Version ......0°C to +70°C

E-Version ....-40°C to +85°C

Storage Temperature Range: ...-65°C to +150°C

† Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specifications is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

#### **DC CHARACTERISTICS**

<b>Electrical Specifications:</b> Unless otherwise noted, $T_A = T_{MIN}$ to $T_{MAX}$ ; $V_{CC} = +4.0V$ to 5.5V.							
Parameters	Sym	Min	Тур	Max	Units	Conditions	
Supply Voltage	V <sub>CC</sub>	4.0	5.0	5.5	V		
ST and PB RST Input High Level	$V_{IH}$	2.0	ı	V <sub>CC</sub> +0.3	V	Note 1	
ST and PB RST Input Low Level	$V_{IL}$	-0.3	_	+0.8	V		
Input Leakage ST, TOL	ΙL	-1.0	_	+1.0	μA

FIGURE 1-2: Push Button Reset and Watchdog Timer Reset Timing Waveforms.

#### **AC CHARACTERISTICS (CONTINUED)**

<b>Electrical Specifications:</b> Unless otherwise noted, $T_A = T_{MIN}$ to $T_{MAX}$ ; $V_{CC} = +4.0 V$ to 5.5 V.								
Parameters	Sym	Min	Тур	Max	Units	Conditions		
PB RST Pulse Width	t <sub>PB</sub>	20	1		ms	Note 1		
PB RST Falling Edge Low to Reset Active	t <sub>PBD</sub>	1	4	20	ms			
PB RST Rising Edge High to Reset Inactive	t <sub>RST</sub>	250	610	1000	ms			
ST Pulse Width	t <sub>ST</sub>	20	1		ns			
ST Time-out Period	t <sub>TD</sub>	62.5	150	250	ms	TD Pin = 0V		
		250	600	1000	ms	TD Pin = Open		
		500	1200	2000	ms	TD Pin = V <sub>CC</sub>		

**Note 1:** PB RST must be held low for a minimum of 20 ms to ensure a reset.

#### 2.0 TYPICAL PERFORMANCE CURVES

Performance Graphs are not available.

#### 3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in Table 3-1.

TABLE 3-1: PIN FUNCTION TABLES

Pin	No.				
8-pin PDIP, SOIC	16-pin SOIC	Symbol	Pin Type	Buffer/ Driver Type	Function
1	2	PB RST		ST	Push-button Reset Input. Input for a Manual Reset Switch. This input debounces (ignores) pulses less than 1 ms in duration and is ensured to recognize inputs of 20 ms or greater.  L = Manual Reset Switch is Active, Force RST/RST pins Active H = Manual Reset Switch is Inactive. State of RST/RST pins determined by other system conditions.
2	4	TD	_	ST	Time Delay Input. The voltage level on this input determines the watchdog timer time-out period. TD = 0V $\rightarrow$ t <sub>TD</sub> = 150 ms TD = Open $\rightarrow$ t <sub>TD</sub> = 600 ms TD = V <sub>CC</sub> $\rightarrow$ t <sub>TD</sub> = 1.2 sec
3	6	TOL	Ι	ST	Tolerance Input. TOL = GND, Max Voltage Trip Point ( $V_{CCTP}$ ) = 4.75V (5% tolerance) TOL = $V_{CC}$ , Max Voltage Trip Point ( $V_{CCTP}$ ) = 4.5V (10% tolerance)
4	8	GND	_	Р	The ground reference for the device.
5	9	RST	0	Push Pull	Reset Output (Active-High) Goes active (High) if one of these conditions occurs:  1. If V <sub>CC</sub> falls below the selected reset voltage threshold. 2. If PBRST pin is forced low. 3. If ST pin is not strobed within the minimum selected time-out period. (see TD pin) 4. During power-up
6	11	RST	0	Open Drain	Reset Output (Active-Low) Goes active (Low) if one of these conditions occurs:  1. If V <sub>CC</sub> falls below the selected reset voltage threshold. 2. If PBRST pin is forced low. 3. If ST pin is not strobed within the minimum selected time-out period. (see TD pin) 4. During power-up
7	13	ST	Ι	ST	Strobe Input Input for Watchdog Timer. WDT period determined by state of TD pin Falling Edge → Resets Watchdog Timer counter (no time-out)
8	15	V <sub>CC</sub>	_	Р	The positive supply (+5V) for the device.
_	1,3,5, 7,10,1 2,16	NC	_	_	No internal connection.

#### 4.0 OPERATIONAL DESCRIPTION

#### 4.1 Power Monitor

The TC1232 provides the function of warning the processor of a power failure. When  $V_{CC}$  is detected as being below the voltage levels defined by the TOL pin, the TC1232's comparator outputs the RST and RST signals to a logic level that warns the system of an out-of-tolerance power supply. The RST and  $\overline{RST}$  signals switch at a threshold value of 4.5V if TOL is tied to  $V_{CC}$ , and at a value of 4.75 volts if TOL is grounded. The RST and  $\overline{RST}$  signals are held active for a minimum of 250 ms to ensure that the power supply voltage has been stabilized.

Figure 4-1 shows the  $V_{CC}$  fall time.

Figure 4-2 shows the  $V_{CC}$  rise time.

Figure 4-3 shows the time from when the voltage trip point is detected to the reset output pin going active.

Figure 4-4 shows the time from when the voltage trip point is exited to the reset output pin going inactive.

FIGURE 4-1: Power-Down Slew Rate.

FIGURE 4-2: Power-up Slew Rate.

**FIGURE 4-3:** V<sub>CC</sub> Detect Reset Output Delay (Power-Down).

**FIGURE 4-4:** V<sub>CC</sub> Detect Reset Output Delay (Power-Up).

#### 4.2 Push Button Reset Input

The debounced manual reset input (PB RST) manually forces the reset outputs into their active states. Figure 4-5 shows a block diagram for using the TC1232 with a push button switch.

Once  $\overline{\text{PB RST}}$  has been low for a time  $t_{\text{PBD}}$  (the push-button delay time), the reset outputs go active. The reset outputs remain in their active states for a minimum of 250 ms after  $\overline{\text{PB RST}}$  rises above  $V_{\text{IH}}$ . Figure 4-6 shows a waveform for the push button switch input and the reset pins output.

A mecha<u>nical push</u> button or active logic signal can drive the  $\overline{PB}$  RST input. The debounced input ignores input pulses less than 1 ms and recognizes pulses of 20 ms or greater. No external pull-up resistor is required because the  $\overline{PB}$  RST input has an internal pull-up to  $V_{CC}$  of approximately 100  $\mu A$ .

FIGURE 4-5: Push Button Reset and Watchdog Timer.

FIGURE 4-6: PB RST Input.

Push Button Reset -

#### 4.3 Watchdog Timer

When the  $\overline{ST}$  input is not stimulated for a preset time period, the watchdog timer function forces RST and RST signals to the active state. The preset time period is determined by the  $\overline{TD}$  inputs to be 150 ms with TD connected to ground, 600 ms with TD floating or 1200 ms with TD connected to V<sub>CC</sub> (typ.). The watchdog timer starts timing-out from the set time period as soon as RST and  $\overline{RST}$  are inactive. If a high-to-low transition occurs on the  $\overline{ST}$  input pin prior to time-out, the watchdog timer is reset and begins to time-out again. If the watchdog timer is allowed to time-out, the RST and  $\overline{RST}$  signals are driven to the active state for 250 ms, minimum (Figure 4-7).

The software routine that strobes  $\overline{ST}$  is critical. The code must be in a section of software that is executed frequently enough so the time between toggles is less than the watchdog time-out period. One common technique controls the microprocessor I/O line from two sections of the program. The software might set the I/O line high while operating in the Foreground mode and set it low while in the Background or Interrupt modes. If both modes do not execute correctly, the watchdog timer issues reset pulses.

 $t_{TD}$  is the maximum elapsed time between  $\overline{ST}$  high-to-low transitions ( $\overline{ST}$  is activated by falling edges only), which will keep the watchdog timer from forcing the reset outputs active for a time of  $t_{RST}$ .  $t_{TD}$  is a function of the voltage at the TD pin, as tabulated below:

TABLE 4-1: WATCHDOG TIMER PERIODS

	t <sub>TD</sub>						
Condition	Min	Тур	Max				
TD pin = 0V	62.5 ms	150 ms	250 ms				
TD pin = Open	250 ms	600 ms	1000 ms				
TD pin = VCC	500 ms	1200 ms	2000 ms				

Figure 4-7 shows a block diagram for using the TC1232 with a PICmicro  $^{\! B}$  MCU and the Watchdog input.

FIGURE 4-7: Watchdog Timer.

Figure 4-8 shows the expected reset out<u>put</u> pin waveforms depending on the period of the  $\overline{ST}$  pin falling edge and the state of the TD input pin.

FIGURE 4-8: Strobe Input.

#### 4.4 Supply Monitor Noise Sensitivity

The TC1232 is optimized for fast response to negative-going changes in  $V_{DD}.$  Systems with an inordinate amount of electrical noise on  $V_{DD}$  (such as systems using relays) may require a 0.01  $\mu F$  or 0.1  $\mu F$  bypass capacitor to reduce detection sensitivity. This capacitor should be installed as close to the TC1232 as possible to keep the capacitor lead length short.

#### 5.0 PACKAGING INFORMATION

#### 5.1 Package Marking Information

Legend: XX...X Customer-specific information
Y Year code (last digit of calendar year)
YY Year code (last 2 digits of calendar year)
WW Week code (week of January 1 is week '01')
NNN Alphanumeric traceability code

NOTES:

#### Note the following details of the code protection feature on Microchip devices:

- · Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

**«JONHON»** (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«**FORSTAR**» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
