

TLT807B0EPV

Low dropout adjustable standby voltage regulator for truck applications

1 Overview

Quality Requirement Category: Automotive

Features

- Adjustable output voltage at $\pm 2\%$ accuracy for output current up to 70 mA
- Very low current consumption: typically 36 μA
- Very low dropout voltage
- Input voltage up to 42 V
- Overvoltage protection up to 58 V ($< 400\text{ ms}$)
- Enable input, active high
- Protection functions:
 - Output current limitation for overload and short circuit conditions
 - Reverse polarity protection
 - Overtemperature shutdown
- Wide temperature range -40°C to 150°C
- Green product (RoHS compliant)
- AEC qualified

Applications

- 24 V applications, such as:
 - Truck applications
 - Commercial Agricultural Vehicle (CAV) applications
 - Construction vehicle applications
- Applications that are permanently connected to the battery

Description

The TLT807B0 is a monolithic integrated low dropout adjustable voltage regulator in a small surface mounted package for the harsh environment of automotive applications.

Pin configuration

3 Pin configuration

3.1 Pin assignment PG-TSDSO-14

Figure 2 Pin assignment

3.2 Pin definitions and functions PG-TSDSO-14

Pin No.	Symbol	Function
1	I	Input In order to compensate line influence, it is recommended to connect a small ceramic capacitor (for example 100 nF) to GND, close to the pins.
4	EN	Enable input with integrated pull-down resistor. “high” signal enables the TLT807B0 “low” signal disables the TLT807B0
7	GND	Ground
11	ADJ	Voltage adjustment Connect a resistive divider to determine the output voltage.
14	Q	Output Connect an output capacitor C_Q to GND close to the pins. C_Q must maintain the capacitance and ESR values specified in “Functional range” on Page 6
2, 3, 5, 6, 8, 9, 10, 12, 13	N.C.	Not connected
Exposed Pad	EP	Exposed pad Connect to GND and heatsink area

General product characteristics

4 General product characteristics

4.1 Absolute maximum ratings

Table 1 Absolute maximum ratings¹⁾
 $T_j = -40^{\circ}\text{C}$ to 150°C ; all voltages with respect to ground (unless otherwise specified)

Parameter	Symbol	Values			Unit	Note or Test Condition	Number
		Min.	Typ.	Max.			
Input I, Enable EN							
Voltage	V_I, V_{EN}	-42	–	45	V	–	P_4.1.1
Voltage	V_I, V_{EN}	-42	–	58	V	t < 400 ms	P_4.1.2
Output Q							
Voltage	V_Q	-0.3	–	36	V	–	P_4.1.3
Adjust ADJ							
Voltage	V_{ADJ}	-0.3	–	16	V	–	P_4.1.4
Temperature							
Junction temperature	T_j	-40	–	150	°C	–	P_4.1.5
Storage temperature	T_{stg}	-55	–	150	°C	–	P_4.1.6
ESD susceptibility							
ESD susceptibility to GND	$V_{ESD,HBM}$	-2	–	2	kV	Human Body Model (HBM) ²⁾	P_4.1.7
ESD susceptibility to GND	$V_{ESD,CDM}$	-750	–	750	V	Charged Device Model (CDM) ³⁾ at all pins	P_4.1.8

1) Not subject to production test, specified by design

2) ESD susceptibility Human Body Model “HBM” according to AEC-Q100-002 - JESD22-A114

3) ESD susceptibility Charged Device Model “CDM” according to ESDA STM5.3.1

Note:

1. Stresses above the ones listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as “outside” normal operating range. Protection functions are not designed for continuous repetitive operation.

General product characteristics
4.2 Functional range
Table 2 Functional range

Parameter	Symbol	Values			Unit	Note or Test Condition	Number
		Min.	Typ.	Max.			
Input voltage range	V_I	4.7 or $V_{Q,nom} + V_{dr}$	–	42	V	– ¹⁾	P_4.2.1
Output capacitor's requirements for stability ²⁾	C_Q	1	–	–	μF	– ³⁾	P_4.2.2
Output capacitor's ESR requirements for stability	$ESR(C_Q)$	–	–	4	Ω	–	P_4.2.3
Junction temperature	T_j	–40	–	150	°C	–	P_4.2.4

1) The minimum input voltage is the higher one of the following values: 4.7 V and $V_{Q,nom} + V_{dr}$.

2) Not subject to production test, specified by design.

3) The minimum output capacitance requirement is applicable for a worst case capacitance tolerance of 30%.

Note: Within the functional or operating range, the IC operates as described in the circuit description. The electrical characteristics are specified within the conditions given in the Electrical Characteristics table.

4.3 Thermal resistance

Note: This thermal data was generated in accordance with JEDEC JESD51 standards. For more information, go to www.jedec.org.

Table 3 Thermal Resistance

Parameter	Symbol	Values			Unit	Note or Test Condition	Number
		Min.	Typ.	Max.			

TLT807B0EPV (PG-TSDSO-14)

Junction to case ¹⁾	R_{thJC}	–	14	–	K/W	Measured to heat slug	P_4.3.1
Junction to ambient	R_{thJA}	–	47	–	K/W	FR4 2s2p board ²⁾	P_4.3.2
Junction to ambient	R_{thJA}	–	143	–	K/W	FR4 1s0p board, footprint only ³⁾	P_4.3.3
Junction to ambient	R_{thJA}	–	66	–	K/W	FR4 1s0p board, 300 mm ² heatsink area ³⁾	P_4.3.4
Junction to ambient	R_{thJA}	–	56	–	K/W	FR4 1s0p board, 600 mm ² heatsink area ³⁾	P_4.3.5

1) Not subject to production test, specified by design.

2) Specified R_{thJA} value is according to Jedec JESD51-2,-5,-7 at natural convection on FR4 2s2p board; The Product (Chip and package) was simulated on a 76.2 x 114.3 x 1.5 mm³ board with 2 inner copper layers (2 x 70 μm Cu, 2 x 35 μm Cu). Where applicable a thermal via array under the exposed pad contacted the first inner copper layer.

3) Specified R_{thJA} value is according to Jedec JESD 51-3 at natural convection on FR4 1s0p board; The Product (Chip and package) was simulated on a 76.2 x 114.3 x 1.5 mm³ board with 1 copper layer (1 x 70 μm Cu).

5 Block description and electrical characteristics

5.1 Voltage regulation

The output voltage V_O feeds a resistive divider. The fraction voltage from the output of the resistive divider feeds the ADJ pin. The TLT807B0 compares the voltage at the ADJ pin to an internal voltage reference, and drives the pass transistor accordingly.

Stability

The control loop stability of the TLT807B0 depends on:

- output capacitor C_O
- load current
- chip temperature

To ensure stable operation, the output capacitor C_O must maintain the capacitance and ESR values specified in **“Functional range” on Page 6**. For details see the typical performance graph **Output capacitor series resistor ESR(CQ) versus Output current IQ**. Size the output capacitor according to the application's needs, so that it can buffer load steps.

Compensation for line influence

An input capacitor C_I is recommended to compensate line influence. An additional reverse polarity protection diode and a combination of several capacitors for filtering should be used. Connect the capacitors close to the pins of the TLT807B0.

Current limit

If the output current exceeds the specified limit, for example in case of a short circuit, the TLT807B0 limits the output current, which leads to a decrease of the output voltage.

Overtemperature shutdown

In fault condition, for example due to permanent short-circuit at the output, the overtemperature shutdown circuit switches off the power stage to prevent the TLT807B0 from immediate destruction. After the TLT807B0 cools down, the regulator restarts. If the fault condition persists, oscillatory thermal behaviour occurs. As a consequence, the junction temperature exceeds the specified maximum value, which reduces the lifetime of the TLT807B0 significantly.

Block description and electrical characteristics

Figure 3 Block diagram voltage regulation

Table 4 Electrical characteristics voltage regulation

$V_I = 28\text{ V}$; $T_j = -40^\circ\text{C}$ to 150°C ; all voltages with respect to ground; positive current flowing out of the pin (unless otherwise specified); typical values are given at $T_j = 25^\circ\text{C}$

Parameter	Symbol	Values			Unit	Note or Test Condition	Number
		Min.	Typ.	Max.			
Reference voltage	V_{Ref}	–	1.2	–	V	–	P_5.1.1
Output voltage accuracy ¹⁾	V_Q	-2	–	+2	%	$100\text{ }\mu\text{A} \leq I_Q \leq 70\text{ mA}$, $6\text{ V} \leq V_I \leq 36\text{ V}$,	P_5.1.2
Output voltage adjustable range	V_Q	1.2	–	20	V	–	P_5.1.3
Dropout voltage	V_{dr}	–	250	500	mV	$I_Q = 70\text{ mA}$, $V_Q = 5\text{ V}$, $V_{\text{dr}} = V_I - V_Q$ ²⁾	P_5.1.4
Load regulation	$\Delta V_{Q, \text{load}}$	-30	-10	10	mV	$I_Q = 1\text{ mA}$ to 70 mA , $V_I = 6\text{ V}$, $V_Q = 5\text{ V}$	P_5.1.5
Line regulation	$\Delta V_{Q, \text{line}}$	-20	5	20	mV	$V_I = 6\text{ V}$ to 36 V , $I_Q = 1\text{ mA}$, $V_Q = 5\text{ V}$	P_5.1.6
Output current limitation	$I_{Q, \text{max}}$	71	160	280	mA	²⁾	P_5.1.10
Power Supply Ripple Rejection ³⁾	PSRR	–	60	–	dB	$f_r = 100\text{ Hz}$, $V_r = 0.5\text{ Vpp}$, $V_Q = 5\text{ V}$	P_5.1.11
Overtemperature shutdown threshold	$T_{j, \text{sd}}$	151	175	200	$^\circ\text{C}$	T_j increasing	P_5.1.15
Overtemperature shutdown threshold hysteresis	$T_{j, \text{sdh}}$	–	15	–	$^\circ\text{C}$	T_j decreasing	P_5.1.16

1) Referring to the device tolerance only, the tolerance of the resistor divider can cause additional deviation. Parameter is tested with the ADJ pin directly connected to the output pin Q.

2) Measured when the output voltage V_Q has dropped 100 mV from the nominal value obtained at $V_I = 28\text{ V}$.

3) Not subject to production test, specified by design.

Junction temperature T_j

Current consumption I_q versus
Input voltage V_I

Current consumption I_q versus
Junction temperature T_j

Block description and electrical characteristics

5.5 Enable

The enable feature switches the TLT807B0 on and off via the voltage applied to the EN pin:

- connect a “high” signal (for example battery voltage) to enable the TLT807B0
- connect a “low” signal (for example GND) to disable the TLT807B0

The hysteresis of the enable function prevents the TLT807B0 from toggling between on-state and off-state due to signals with slow slopes at the EN pin.

Table 6 Electrical characteristics enable

$V_I = 28\text{ V}$; $T_j = -40^\circ\text{C}$ to 150°C ; all voltages with respect to ground; positive current flowing out of the pin (unless otherwise specified); typical values are given at $T_j = 25^\circ\text{C}$

Parameter	Symbol	Values			Unit	Note or Test Condition	Number
		Min.	Typ.	Max.			
Enable “high” level voltage	$V_{\text{EN,ON}}$	2	–	–	V	–	P_5.5.1
Enable “low” level voltage	$V_{\text{EN,OFF}}$	–	–	0.8	V	$T_j \leq 125^\circ\text{C}^{1)}$	P_5.5.2
Enable “low” level voltage	$V_{\text{EN,OFF}}$	–	–	0.4	V	–	P_5.5.3
Enable input current	$I_{\text{EN,ON}}$	–	4	8	μA	$V_{\text{EN}} = 5\text{ V}$	P_5.5.5

1) Not subject to production test, specified by design.

Application information

6 Application information

Note: The following information is given as a hint for the implementation of the device only and shall not be regarded as a description or warranty of a certain functionality, condition or quality of the device.

Figure 4 Application diagram

Note: This is a very simplified example of an application circuit. The function must be verified in the real application.

The resistor divider for a specific output voltage can be calculated according to [Chapter 6.1](#). V_{ADJ} corresponds to V_{Ref} and is typically 1.2 V. Additionally the sum of the resistor divider should not exceed the value as stated in [Equation \(6.2\)](#).

$$\frac{R_1}{R_2} = \frac{V_Q}{V_{ADJ}} - 1 \quad (6.1)$$

$$R_1 + R_2 \leq 250 \text{ k}\Omega \quad (6.2)$$

Package outlines

Green product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e. Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
