

MAX16160

High-Accuracy 4-Channel, Any-Input Supervisory Circuits

General Description

The MAX16160 precision, four-channel supervisory circuit is designed to maintain system integrity in multi-supply systems. The device monitors its own power supply voltage in addition to three other system supply voltages and asserts the reset output whenever any supply voltage falls below its reset threshold. After all of the supply voltages rise above their reset thresholds, the reset output remains asserted for the reset timeout period, and then de-asserts.

During power-up, and before all of the input voltages exceed their trip thresholds, the reset output asserts low if any of the monitored inputs is greater than 1V. The open-drain output has a weak 18 μ A (typ) pullup to IN2/V_{CC}, eliminating the need for external pullup resistors.

The MAX16160 offers a wide range of threshold options. Input thresholds may be fixed or adjustable. Fixed reset voltage thresholds for IN1, IN3, IN4 are available from 0.5V to 5V in approximately 20mV increments. Reset voltage thresholds for IN2/V_{CC} are available from 1.76V to 5V in approximately 20mV increments.

The MAX16160 operates over the -40°C to +125°C temperature and is available in a small, 6-bump WLP and 6-pin SOT23 package.

Applications

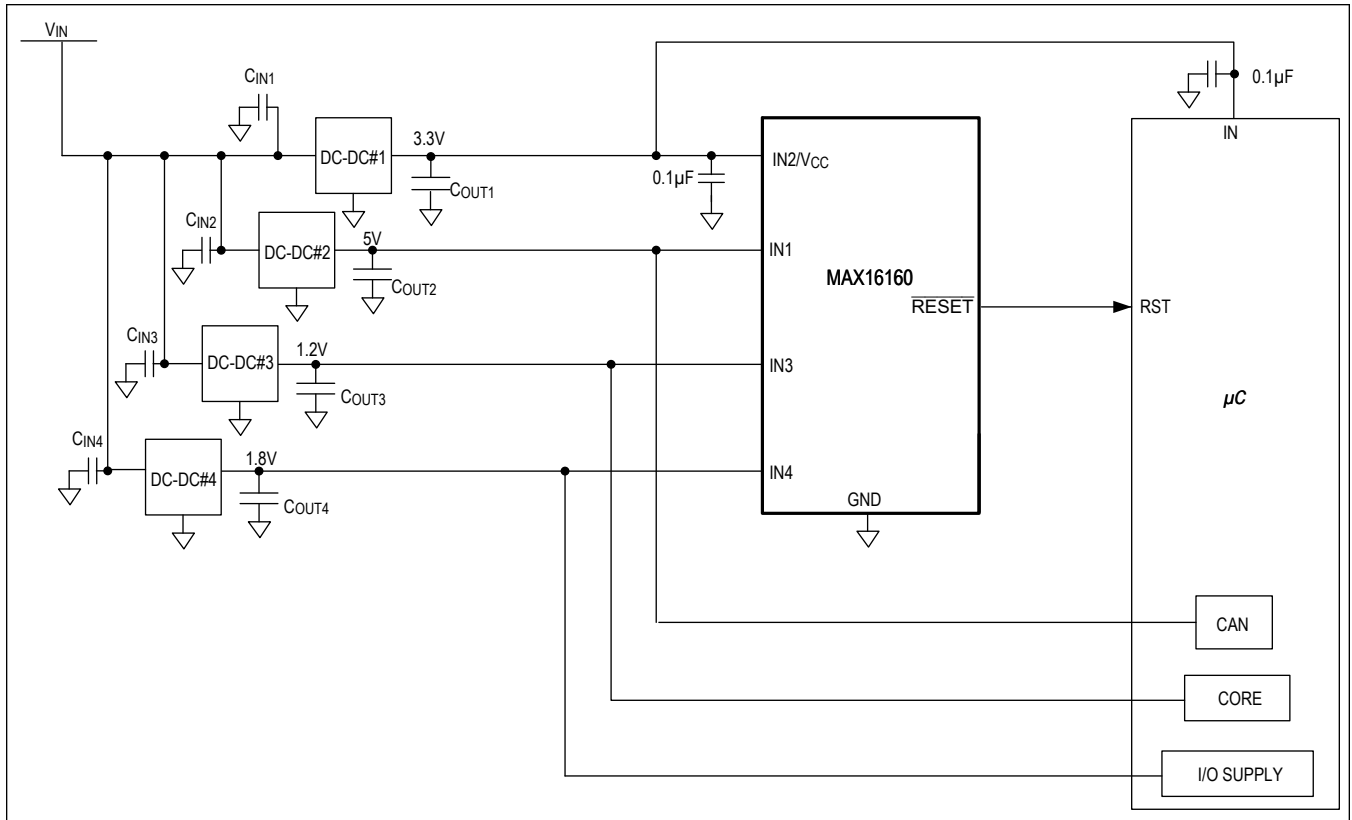

- Telecommunications
- High-End Printers
- Desktop and Notebook Computers
- Data Storage Equipment
- Networking Equipment
- Industrial Equipment
- Set-Top Boxes
- Servers/Workstations

Benefits and Features

- Valid $\overline{\text{RESET}}$ Logic State for Any Input Above 1V
- $\pm 1\%$ Accuracy for All Inputs
- Low 17 μ A Supply Current
- Open-Drain $\overline{\text{RESET}}$ Output with 18 μ A Internal Pullup
- Immune to Short Monitored Supply Transients
- Internally Fixed/Adjustable Threshold Options
- -40°C to +125°C Operating Temperature Range
- Small, 6-Pin SOT23 Package and 6-Bump WLP

[Ordering Information](#) appears at end of data sheet.

Typical Operating Circuit

Absolute Maximum Ratings

IN1, IN2/V _{CC} , IN3, IN4 RESE \bar{T} , to GND	-0.3V to +6V	Operating Temperature Range	-40°C to +125°C
Continuous RESE \bar{T} Current	20mA	Storage Temperature Range	-65°C to +150°C
Continuous Power Dissipation (T _A = +70°C)		Junction Temperature	+150°C
SOT23, derate 8.7mW/°C above +70°C).....	696mW	Lead Temperature (soldering, 10 seconds)	+300°C
WLP, derate 10.51mW/°C above +70°C)	840mW		

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Information

6 SOT23

Package Code	U6+1C
Outline Number	21-0058
Land Pattern Number	90-0175
Thermal Resistance, Four-Layer Board:	
Junction to Ambient (θ_{JA})	115°C/W
Junction to Case (θ_{JC})	80°C/W

6 WLP

Package Code	N60L1+1
Outline Number	21-100366
Land Pattern Number	
Thermal Resistance, Four-Layer Board:	
Junction to Ambient (θ_{JA})	95.15°C/W

For the latest package outline information and land patterns (footprints), go to www.maximintegrated.com/packages. Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

Electrical Characteristics

($V_{IN2}/V_{CC} = 1.7V$ to $5.5V$, $T_A = -40^\circ C$ to $+125^\circ C$, unless otherwise noted. Typical values are at $T_A = +25^\circ C$.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Operating Voltage Range	V_{IN2}/V_{CC}		1.7		5.5	V
	$V_{IN_}$	Reset output is guaranteed to be at known state	1			
Supply Current	I_{CC}	\overline{RESET} not asserted	5	17	37	μA
$V_{IN_}$ Input Current	$I_{IN_}$	IN1, IN3, IN4, fixed threshold inputs			2.3	μA
		IN1, IN3, IN4, adjustable threshold inputs			0.3	
Fixed Threshold Voltage Accuracy	V_{TH_ACC}	V_{IN1} , V_{IN2}/V_{CC} , V_{IN3} , V_{IN4} falling	-1		+1	%
Adjustable Input Threshold	$V_{TH_}$	Adjustable thresholds options only. $V_{IN2}/V_{CC} > V_{TH2}$	0.6138	0.620	0.6262	V
IN1, IN3, IN4 Threshold Range		$V_{IN2}/V_{CC} \geq 1.7V$, fixed threshold options only (Note 1)	0.52		5	V
Threshold Voltage Hysteresis	V_{HYS}	MAX16160___A		0.25		%
V_{IN2}/V_{CC} Threshold Range			1.76		5	V
Reset Output Voltage Low	V_{OL}	$V_{IN2}/V_{CC} = 2.5V$, $I_{SINK} = 1.2mA$,			0.4	V
		$V_{IN2}/V_{CC} = 5V$, $I_{SINK} = 2mA$			0.3	
		$V_{IN_} = 1V$, $I_{SINK} = 50\mu A$			0.3	
Reset Output Voltage High	V_{OH}	$V_{IN2}/V_{CC} \geq 2V$, $I_{SOURCE} = 6\mu A$, \overline{RESET} deasserted	0.8 x V_{IN2}/V_{CC}			V
Reset Threshold Temperature Coefficient	TCV_{TH}			60		ppm/ $^\circ C$
Reset Timeout Period Accuracy	t_{RP_ACC}	$V_{IN2}/V_{CC} > V_{TH2}$	-40		+30	%
Input to Reset Delay	t_{RD}	V_{IN2}/V_{CC} , V_{IN1} , V_{IN3} , V_{IN4} falling at $10mV/\mu s$ from $(V_{TH} + 1\%)$ to $(V_{TH} - 1\%)$		20		μs
RESET Output Source Current	I_{OH}	$V_{IN2}/V_{CC} \geq 2V$, \overline{RESET} deasserted		18		μA

Note 1: 100% production tested at $T_A = +25^\circ C$. Limits over temperature guaranteed by design.

Typical Operating Characteristics

($V_{IN2}/V_{CC} = 3.3V$, $T_A = -40^{\circ}C$ to $+125^{\circ}C$.)

Typical Operating Characteristics (continued)

($V_{IN2}/V_{CC} = 3.3V$, $T_A = -40^{\circ}C$ to $+125^{\circ}C$.)

Pin Configurations

6 SOT23

6 WLP

Pin Description

PIN		NAME	FUNCTION
6 SOT23	6 WLP		
1	B1	IN1	Monitoring Input 1. When Input 1 has an internally fixed trip threshold, connect directly to the supply voltage to be monitored. When Input 1 is an adjustable input, connect to the supply voltage to be monitored through a resistive divider network. For better immunity to external noise, place a 0.1µF capacitor between IN1 and GND as close as possible to the MAX16060.
2	B2	IN2/V _{CC}	Supply Voltage. IN2/V _{CC} is the power supply input and the monitoring input. Bypass with a 0.1µF capacitor between IN2 and GND.

Pin Description (continued)

PIN		NAME	FUNCTION
6 SOT23	6 WLP		
3	B3	IN3	Monitoring Input 3. When Input 3 has an internally fixed trip threshold, connect directly to the supply voltage to be monitored. When Input 3 is an adjustable input, connect to the supply voltage to be monitored through a resistive divider network. For better immunity to external noise, place a 0.1µF capacitor between IN3 and GND as close as possible to the MAX16060.
4	A3	IN4	Monitoring Input 4. When Input 4 has an internally fixed trip threshold, connect directly to the supply voltage to be monitored. When Input 4 is an adjustable input, connect to the supply voltage to be monitored through a resistive divider network. For better immunity to external noise, place a 0.1µF capacitor between IN4 and GND as close as possible to the MAX16060.
5	A2	GND	Ground
6	A1	$\overline{\text{RESET}}$	Active-Low, Open-Drain Reset Output. $\overline{\text{RESET}}$ asserts low when any input falls below its set threshold. $\overline{\text{RESET}}$ deasserts after the reset timeout period when all inputs rise above their set thresholds. $\overline{\text{RESET}}$ has a weak (18µA) internal pullup to IN2/V _{CC} .

Adjustable Threshold

Detailed Description

The MAX16160 is high-accuracy four-channel supervisory circuit that monitors its own power input supply and three additional system supply voltages and asserts an active-low reset signal when any input voltage drops below its reset threshold. After all of the input voltages rise above their threshold voltages, the reset output remains asserted during the reset timeout period, and finally asserts after the timeout period ends. During power up, before the inputs have reached their threshold voltages, the reset output ($\overline{\text{RESET}}$) asserts low when any of the monitoring inputs exceeds 1V. (Figure 1).

Figure 1. Power-Up Timing Characteristics

Reset Output

The MAX16160 features an active-low open-drain reset output ($\overline{\text{RESET}}$) that asserts low when any monitored input drops below its threshold voltage, V_{TH} . The reset output remains asserted as long as any of the monitoring inputs remains below its threshold voltage. When all inputs rise above their threshold voltages (plus the required hysteresis), the reset output remains asserted during the reset timeout period, and then deasserts. See [Figure 2](#) for more details. Only one input voltage is shown; all others are assumed to be greater than their threshold voltages. Contact Maxim for reset timeout period options not listed in the [Ordering Information](#) table.

Figure 2. Reset Output Timing

An 18 μA (typ) pullup current to $\text{IN2}/V_{\text{CC}}$ eliminates the need for an external pullup resistor in many cases. If a logic-high level different from $\text{IN2}/V_{\text{CC}}$ is needed, an external pullup resistor can be connected to a pullup voltage up to 5.5V. Internal circuitry prevents reverse current flow from the external pullup voltage to $\text{IN2}/V_{\text{CC}}$ ([Figure 3](#)).

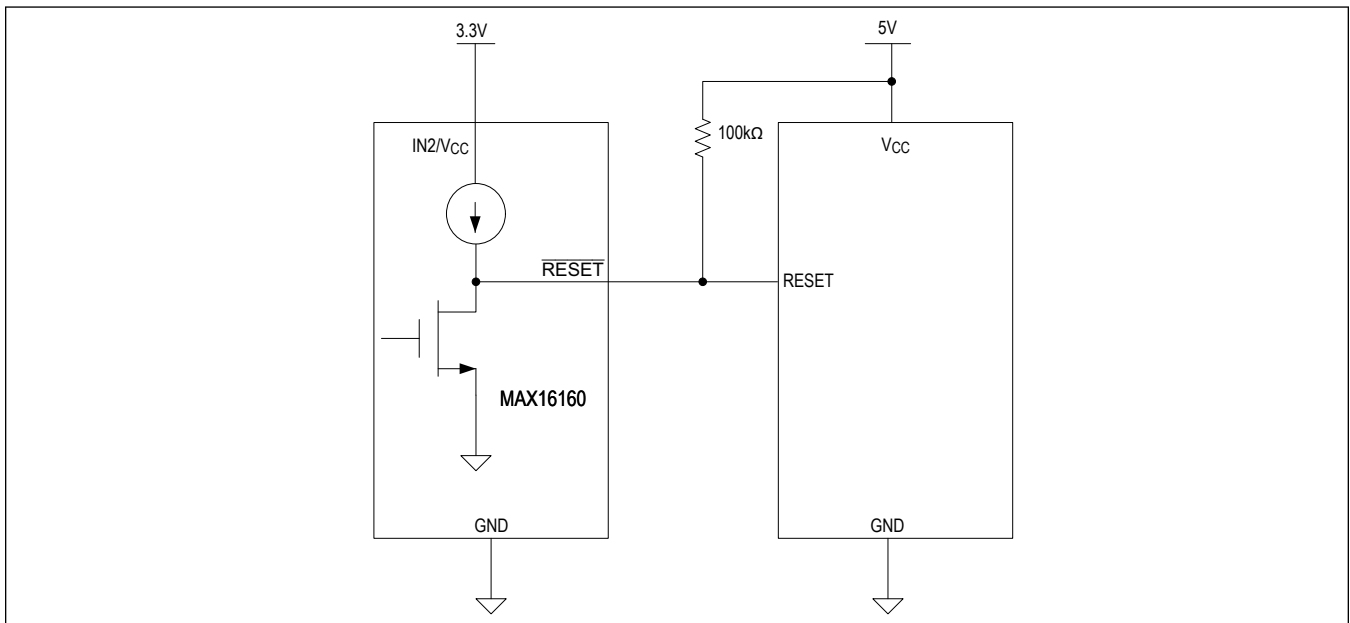

Figure 3. Interfacing to a Logic Supply Voltage Other Than $\text{IN2}/V_{\text{CC}}$

Input Hysteresis

The MAX16160 is immune to short IN_ transients. Each of the internal comparators are available with either 0.5% or 0.25% hysteresis with respect to the input threshold. Hysteresis provides immunity to input noise without significantly reducing the input threshold accuracy. See the *Maximum IN_ Transient Duration vs. Reset Threshold Overdrive* graph in the Typical Operating Characteristics section.

Input Thresholds

The MAX16160 monitors all inputs with $\pm 1\%$ accuracy across the full temperature and supply voltage ranges. The input thresholds (IN1/IN3/IN4) are available with values ranging from 0.5V to 5V in approximately 20mV increments. IN2/V_{CC} input thresholds are available from 1.76V to 5V in approximately 20mV increments. All inputs except IN2/V_{CC} are available as adjustable-threshold inputs (0.62V internal threshold) using an external resistor divider. Contact Maxim for thresholds not listed in the Ordering Information table.

Applications Information

Adjustable Threshold Inputs (IN1, IN3, IN4)

The threshold voltage at each adjustable input is 0.62V (typ). To monitor a voltage $> 0.62\text{V}$, connect a resistor-divider network to the circuit, as shown in [Figure 4](#). Use the following equations to calculate the resistor values.

$$V_{\text{IN_TH}} = 0.62\text{V} \times \left(\frac{R1 + R2}{R2} \right)$$

or

$$R1 = R2 \left(\left(\frac{V_{\text{IN_TH}}}{0.62\text{V}} \right) - 1 \right)$$

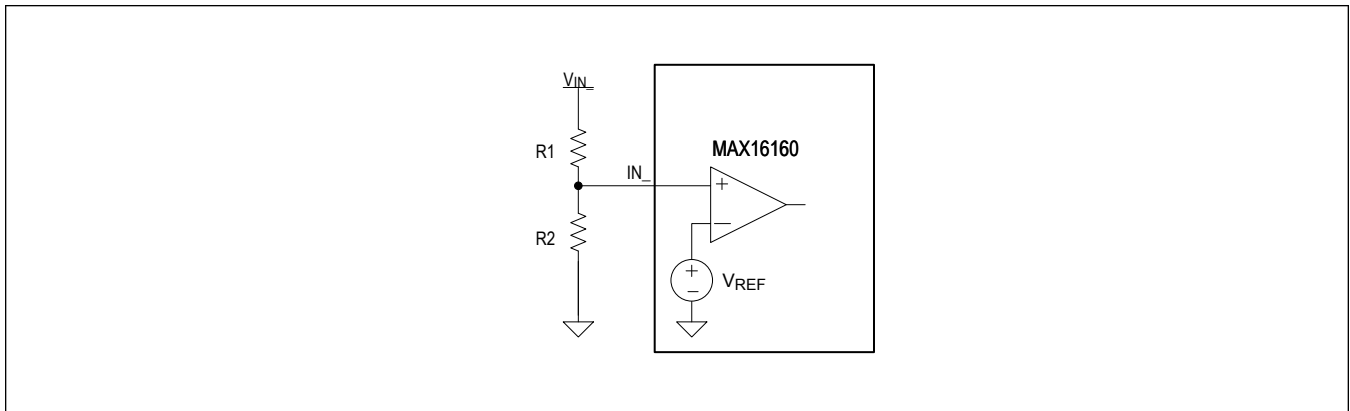

Figure 4. Adjustable Input Circuit

Adding Manual Reset Capability

Figure 5 shows an application circuit adding manual reset to the MAX16160. Depressing the push-button switch shorts the analog input to ground and initiates a reset output pulse. The switch must be open for at least reset timeout period (t_{RP}) in order to deassert the reset output. Use a small capacitor to improve noise immunity when using long leads from the push-button switch to the adjustable input.

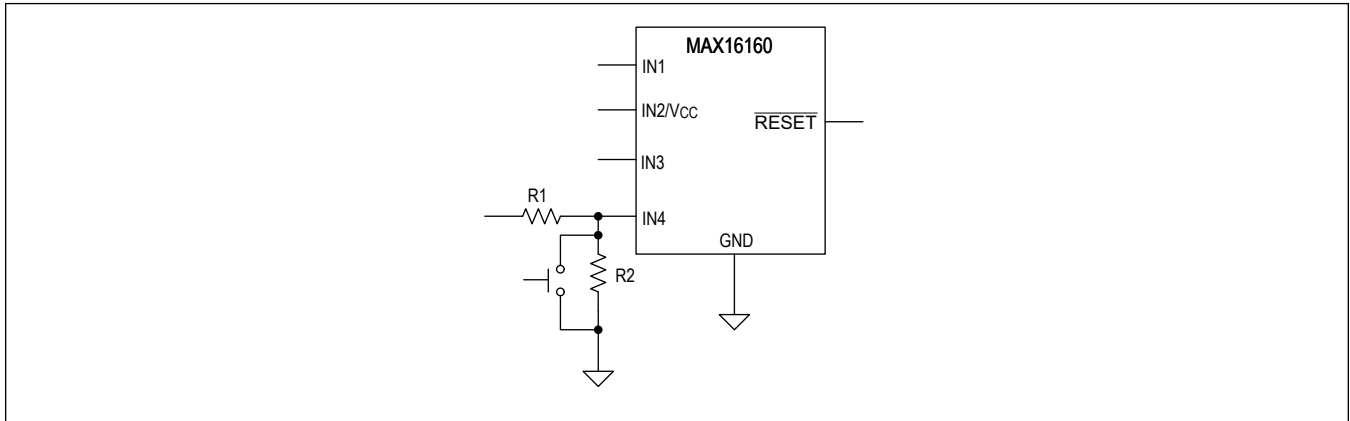

Figure 5. Adding Manual Reset Capability

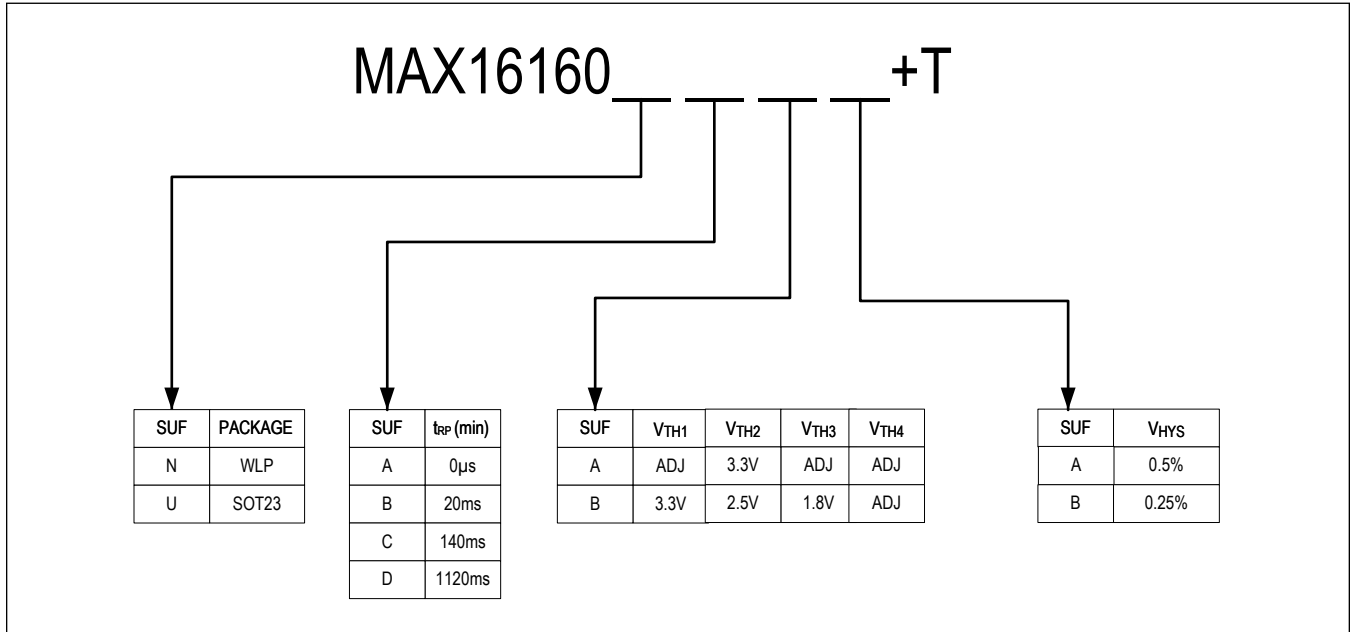

Unused Inputs

Connect unused monitor inputs to a supply voltage greater in magnitude than their specified threshold voltages. For unused IN_ adjustable inputs, connect a 1M Ω series resistor between the unused input and IN2/V_{CC} to limit the bias current. Do not connect unused monitor inputs to ground or allow them to float.

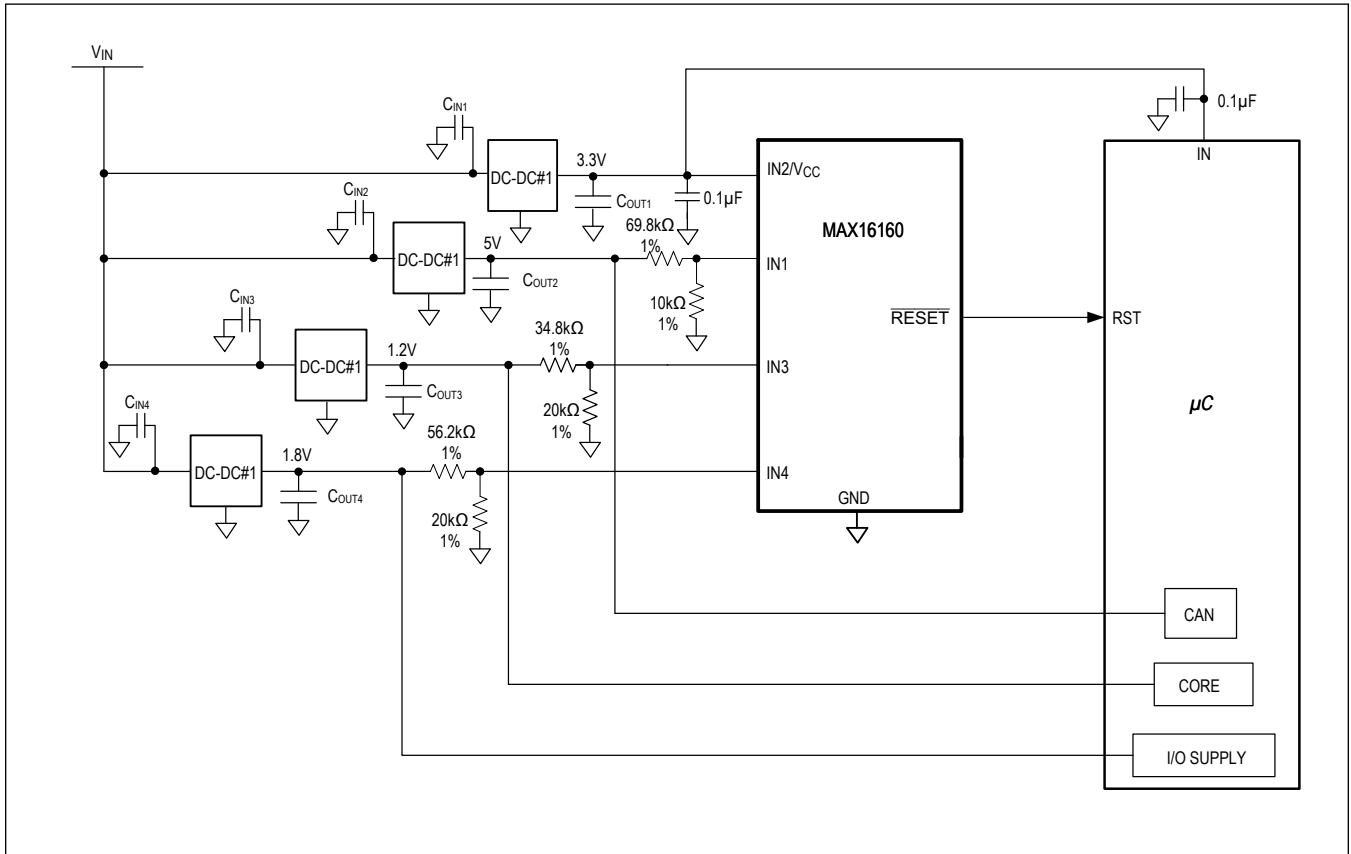

Power-Supply Bypassing

The MAX16160 operates from a 1.70V to 5.5V supply. Bypass IN2/V_{CC} to ground with a 0.1 μ F capacitor as close to the device as possible to improve transient immunity. For fast-rising V_{CC} transients, additional capacitance may be required.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
