

# CAT5115

## 32-Tap Digitally Programmable Potentiometer (DPP)

### Description

The CAT5115 is a single digitally programmable potentiometer (DPP) designed as an electronic replacement for mechanical potentiometers and trim pots. Ideal for automated adjustments on high volume production lines, they are also well suited for applications where equipment requiring periodic adjustment is either difficult to access or located in a hazardous or remote environment.

The CAT5115 contains a 32-tap series resistor array connected between two terminals  $R_H$  and  $R_L$ . An up/down counter and decoder that are controlled by three input pins, determines which tap is connected to the wiper,  $R_W$ . The wiper is always set to the mid point, tap 15 at power up. The tap position is not stored in memory. Wiper-control of the CAT5115 is accomplished with three input control pins,  $\overline{CS}$ ,  $U/\overline{D}$ , and  $\overline{INC}$ . The  $\overline{INC}$  input increments the wiper in the direction which is determined by the logic state of the  $U/\overline{D}$  input. The  $\overline{CS}$  input is used to select the device.

The digitally programmable potentiometer can be used as a three-terminal resistive divider or as a two-terminal variable resistor. DPPs bring variability and programmability to a wide variety of applications including control, parameter adjustments, and signal processing.

For a pin-compatible device that recalls a stored tap position on power-up refer to the CAT5114 data sheet.

### Features

- 32-position Linear Taper Potentiometer
- Low Power CMOS Technology
- Single Supply Operation: 2.5 V – 6.0 V
- Increment Up/Down Serial Interface
- Resistance Values: 10 k $\Omega$ , 50 k $\Omega$  and 100 k $\Omega$
- Available in PDIP, SOIC, TSSOP, MSOP and Space Saving 2 x 2.5 mm TDFN Packages
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

### Applications

- Automated Product Calibration
- Remote Control Adjustments
- Offset, Gain and Zero Control
- Tamper-proof Calibrations
- Contrast, Brightness and Volume Controls
- Motor Controls and Feedback Systems
- Programmable Analog Functions

Table 1. PIN DESCRIPTIONS

| Name                           | Function                    |
|--------------------------------|-----------------------------|
| $\overline{\text{INC}}$        | Increment Control           |
| $\text{U}/\overline{\text{D}}$ | Up/Down Control             |
| $\text{R}_\text{H}$            | Potentiometer High Terminal |
| GND                            | Ground                      |
| $\text{R}_\text{W}$            | Buffered Wiper Terminal     |
| $\text{R}_\text{L}$            | Potentiometer Low Terminal  |
| $\overline{\text{CS}}$         | Chip Select                 |
| $\text{V}_{\text{CC}}$         | Supply Voltage              |

Pin Function

$\overline{\text{INC}}$ : Increment Control Input

The  $\overline{\text{INC}}$  input moves the wiper in the up or down direction determined by the condition of the  $\text{U}/\overline{\text{D}}$  input.

$\text{U}/\overline{\text{D}}$ : Up/Down Control Input

The  $\text{U}/\overline{\text{D}}$  input controls the direction of the wiper movement. When in a high state and  $\overline{\text{CS}}$  is low, any high-to-low transition on  $\overline{\text{INC}}$  will cause the wiper to move one increment toward the  $\text{R}_\text{H}$  terminal. When in a low state and  $\overline{\text{CS}}$  is low, any high-to-low transition on  $\overline{\text{INC}}$  will cause the wiper to move one increment towards the  $\text{R}_\text{L}$  terminal.

$\text{R}_\text{H}$ : High End Potentiometer Terminal

$\text{R}_\text{H}$  is the high end terminal of the potentiometer. It is not required that this terminal be connected to a potential greater than the  $\text{R}_\text{L}$  terminal. Voltage applied to the  $\text{R}_\text{H}$  terminal cannot exceed the supply voltage,  $\text{V}_{\text{CC}}$  or go below ground, GND.

$\text{R}_\text{W}$ : Wiper Potentiometer Terminal

$\text{R}_\text{W}$  is the wiper terminal of the potentiometer. Its position on the resistor array is controlled by the control inputs,  $\overline{\text{INC}}$ ,

$\text{U}/\overline{\text{D}}$  and  $\overline{\text{CS}}$ . Voltage applied to the  $\text{R}_\text{W}$  terminal cannot exceed the supply voltage,  $\text{V}_{\text{CC}}$  or go below ground, GND.

$\text{R}_\text{L}$ : Low End Potentiometer Terminal

$\text{R}_\text{L}$  is the low end terminal of the potentiometer. It is not required that this terminal be connected to a potential less than the  $\text{R}_\text{H}$  terminal. Voltage applied to the  $\text{R}_\text{L}$  terminal cannot exceed the supply voltage,  $\text{V}_{\text{CC}}$  or go below ground, GND.  $\text{R}_\text{L}$  and  $\text{R}_\text{H}$  are electrically interchangeable.

$\overline{\text{CS}}$ : Chip Select

The chip select input is used to activate the control input of the CAT5115 and is active low. When in a high state, activity on the  $\overline{\text{INC}}$  and  $\text{U}/\overline{\text{D}}$  inputs will not affect or change the position of the wiper.

Device Operation

The CAT5115 operates like a digitally controlled potentiometer with  $\text{R}_\text{H}$  and  $\text{R}_\text{L}$  equivalent to the high and low terminals and  $\text{R}_\text{W}$  equivalent to the mechanical potentiometer's wiper. There are 32 available tap positions including the resistor end points,  $\text{R}_\text{H}$  and  $\text{R}_\text{L}$ . There are 31 resistor elements connected in series between the  $\text{R}_\text{H}$  and  $\text{R}_\text{L}$  terminals. The wiper terminal is connected to one of the 32 taps and controlled by three inputs,  $\overline{\text{INC}}$ ,  $\text{U}/\overline{\text{D}}$  and  $\overline{\text{CS}}$ . These inputs control a five-bit up/down counter whose output is decoded to select the wiper position.

With  $\overline{\text{CS}}$  set LOW the CAT5115 is selected and will respond to the  $\text{U}/\overline{\text{D}}$  and  $\overline{\text{INC}}$  inputs. HIGH to LOW transitions on  $\overline{\text{INC}}$  will increment or decrement the wiper (depending on the state of the  $\text{U}/\overline{\text{D}}$  input and five-bit counter). The wiper, when at either fixed terminal, acts like its mechanical equivalent and does not move beyond the last position. When the CAT5115 is powered-down, the wiper position is reset. When power is restored, the counter is set to the mid point, tap 15.

3. This parameter is tested initially and after a design or process change that affects the parameter.

4. Latch-up protection is provided for stresses up to 100 mA on address and data pins from  $-1\text{ V}$  to  $V_{CC} + 1\text{ V}$ .

5.  $I_W$  = source or sink.

6. These parameters are periodically sampled and are not 100% tested.

**Table 6. AC TEST CONDITIONS**

|                           |  |
|---------------------------|--|
| V <sub>CC</sub> Range     | 2.5 V ≤ V <sub>CC</sub> ≤ 6.0 V                |
| Input Pulse Levels        | 0.2 × V <sub>CC</sub> to 0.7 × V <sub>CC</sub> |
| Input Rise and Fall Times | 10 ns  |
| Input Reference Levels    | 0.5 × V <sub>CC</sub>                          |

**Table 7. AC OPERATING CHARACTERISTICS** (V<sub>CC</sub> = +2.5 V to +6.0 V, V<sub>H</sub> = V<sub>CC</sub>, V<sub>L</sub> = 0 V, unless otherwise specified)

| Symbol                                   | Parameter  | Min | Typ (Note 7) | Max | Units |
|--|--|-----|--------------|-----|-------|

| t <sub>lW</sub>                          | $\overline{\text{INC}}$ to V <sub>OUT</sub> Change | –   | 1            | 5   | μs    |
| t <sub>CYC</sub>                         | $\overline{\text{INC}}$ Cycle Time                 | 1   | –            | –   | μs    |
| t <sub>R</sub> , t <sub>F</sub> (Note 8) | $\overline{\text{INC}}$ Input Rise and Fall Time   | –   | –            | 500 | μs    |
| t <sub>PU</sub> (Note 8)                 | Power-up to Wiper Stable                           | –   | –            | 1   | ms    |

7. Typical values are for T<sub>A</sub> = 25°C and nominal supply voltage.

8. This parameter is periodically sampled and not 100% tested.

9. MI in the A.C. Timing diagram refers to the minimum incremental change in the W output due to a change in the wiper position.

## Example of Ordering Information (Note 15)

11. All packages are RoHS-compliant (Lead-free, Halogen-free).
12. The standard lead finish is NiPdAu.
13. For additional package and temperature options, please contact your nearest ON Semiconductor Sales office.
14. TDFN is not available in NiPdAu (-G) version.
15. The device used in the above example is a CAT5115VI-10-GT3 (SOIC, Industrial Temperature, 10 kΩ, NiPdAu, Tape & Reel, 3,000/Reel).
16. For information on tape and reel specifications, including part orientation and tape sizes, please refer to our Tape and Reel Packaging Specifications Brochure, BRD8011/D.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
