

## General Description

The 954206B is a CK410M Compliant clock synthesizer. 954206B provides a single-chip solution for mobile systems built with Intel P4-M processors and Intel mobile chipsets. 954206B is driven with a 14.318MHz crystal and generates CPU outputs up to 400MHz. It provides the tight ppm accuracy required by Serial ATA and PCI Express.

## Recommended Application

- CK410M Compliant Main Clock

## Output Features

- 2 - 0.7V current-mode differential CPU pairs
- 4 - 0.7V current-mode differential PCI Express\*pairs
- 1 - 0.7V current-mode differential CPU/PCI Express selectable pair
- 1 - 0.7V current-mode differential SATA pair
- 1 - 0.7V current-mode differential LCDCLK/PCI Express selectable pair
- 1 - 0.7V current-mode differential PCI Express/Clock Request pair
- 4 - PCI (33MHz)
- 2 - PCICLK\_F, (33MHz) free-running
- 1 - USB, 48MHz
- 1 - DOT, 96MHz, 0.7V current differential pair
- 2 - REF, 14.318MHz

## Features/Benefits

- Supports tight ppm accuracy clocks for Serial-ATA and PCI Express
- Supports programmable spread percentage and frequency
- Uses external 14.318MHz crystal, external crystal load caps are required for frequency tuning
- Supports undriven differential CPU, PCI Express pair in PD for power management.
- PEREQ# pins to support PCI Express and SATA power management.

## Key Specifications

- CPU outputs cycle-cycle jitter < 85ps
- PCI Express outputs cycle-cycle jitter < 125ps
- SATA outputs cycle-cycle jitter < 125ps
- PCI outputs cycle-cycle jitter < 500ps
- ± 300ppm frequency accuracy on CPU, PCI Express and SATA clocks
- ± 100ppm frequency accuracy on USB clocks

## Pin Assignment

## Pin Descriptions (cont.)

| PIN # | PIN NAME             | TYPE | DESCRIPTION                                                                                                                                                                                                                                   |
|-------|----------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29    | GND                  | PWR  | Ground pin.                                                                                                                                                                                                                                   |
| 30    | PCIEXC4              | OUT  | Complement clock of differential PCI_Express pair.                                                                                                                                                                                            |
| 31    | PCIEXT4              | OUT  | True clock of differential PCI_Express pair.                                                                                                                                                                                                  |
| 32    | PEREQ2#*/PCIEXC5     | I/O  | Real-time input pin that controls SATACLK and PCIEXCLK outputs that are selected through the I2c. 1 = disabled, 0 = enabled. / Complement clock of differential PCI Express output.                                                           |
| 33    | PEREQ1#*/PCIEXT5     | I/O  | Real-time input pin that controls SATACLK and PCIEXCLK outputs that are selected through the I2c. 1 = disabled, 0 = enabled. / True clock of differential PCI Express output.                                                                 |
| 34    | VDDPCIEX             | PWR  | Power supply for PCI Express clocks, nominal 3.3V                                                                                                                                                                                             |
| 35    | CPUCLKC2_ITP/PCIEXC6 | OUT  | Complementary clock of CPU_ITP/PCIEX differential pair CPU_ITP/PCIEX output. These are current mode outputs. External resistors are required for voltage bias. Selected by ITP_EN input.                                                      |
| 36    | CPUCLKT2_ITP/PCIEXT6 | OUT  | True clock of differential pair CPU outputs. These are current mode outputs. External resistors are required for voltage bias. / True clock of differential PCIEX pair                                                                        |
| 37    | VDDA                 | PWR  | 3.3V power for the PLL core.                                                                                                                                                                                                                  |
| 38    | GNDA                 | PWR  | Ground pin for the PLL core.                                                                                                                                                                                                                  |
| 39    | IREF                 | OUT  | This pin establishes the reference current for the differential current-mode output pairs. This pin requires a fixed precision resistor tied to ground in order to establish the appropriate current. 475 ohms is the standard value.         |
| 40    | CPUCLKC1             | OUT  | Complementary clock of differential pair CPU outputs. These are current mode outputs. External resistors are required for voltage bias.                                                                                                       |
| 41    | CPUCLKT1             | OUT  | True clock of differential pair CPU outputs. These are current mode outputs. External resistors are required for voltage bias.                                                                                                                |
| 42    | VDDCPU               | PWR  | Supply for CPU clocks, 3.3V nominal                                                                                                                                                                                                           |
| 43    | CPUCLKC0             | OUT  | Complementary clock of differential pair CPU outputs. These are current mode outputs. External resistors are required for voltage bias.                                                                                                       |
| 44    | CPUCLKT0             | OUT  | True clock of differential pair CPU outputs. These are current mode outputs. External resistors are required for voltage bias.                                                                                                                |
| 45    | GND                  | PWR  | Ground pin.                                                                                                                                                                                                                                   |
| 46    | SCLK                 | IN   | Clock pin of SMBus circuitry, 5V tolerant.                                                                                                                                                                                                    |
| 47    | SDATA                | I/O  | Data pin for SMBus circuitry, 5V tolerant.                                                                                                                                                                                                    |
| 48    | VDDREF               | PWR  | Ref, XTAL power supply, nominal 3.3V                                                                                                                                                                                                          |
| 49    | X2                   | OUT  | Crystal output, Nominally 14.318MHz                                                                                                                                                                                                           |
| 50    | X1                   | IN   | Crystal input, Nominally 14.318MHz.                                                                                                                                                                                                           |
| 51    | GND                  | PWR  | Ground pin.                                                                                                                                                                                                                                   |
| 52    | REF0                 | OUT  | 14.318 MHz reference clock.                                                                                                                                                                                                                   |
| 53    | REF1/FSLC/TEST_SEL   | I/O  | 14.318 MHz reference clock./ 3.3V tolerant input for CPU frequency selection. Refer to input electrical characteristics for Vil_FS and Vih_FS values. /TEST_Sel: 3-level latched input to enable test mode. Refer to Test Clarification Table |
| 54    | CPU_STOP#            | IN   | Stops all CPUCLK, except those set to be free running clocks                                                                                                                                                                                  |
| 55    | PCI/SRC_STOP#        | IN   | Stops all PCICLKs and SRCCLKs besides the free-running clocks at logic 0 level, when input low                                                                                                                                                |
| 56    | PCICLK2/REQ_SEL**    | I/O  | 3.3V PCI clock output / Latch select input pin. 0 = PCIEXCLK, 1 = PEREQ#                                                                                                                                                                      |

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the 954206B. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

| PARAMETER                       | SYMBOL   | CONDITIONS | MIN       | TYP | MAX                    | UNITS | Notes |
|---------------------------------|----------|------------|-----------|-----|------------------------|-------|-------|

## General SMBus Serial Interface Information for 954206B

### How to Write

- Controller (host) sends a start bit
- Controller (host) sends the write address
- IDT clock will **acknowledge**
- Controller (host) sends the beginning byte location = N
- IDT clock will **acknowledge**
- Controller (host) sends the byte count = X
- IDT clock will **acknowledge**
- Controller (host) starts sending Byte N through Byte N+X-1
- IDT clock will **acknowledge** each byte **one at a time**
- Controller (host) sends a Stop bit

| Index Block Write Operation |           |        |                      |

| Read Address      | Write Address     |
|-------------------|-------------------|
| D3 <sub>(H)</sub> | D2 <sub>(H)</sub> |

### How to Read

- Controller (host) will send a start bit
- Controller (host) sends the write address
- IDT clock will **acknowledge**
- Controller (host) sends the beginning byte location = N
- IDT clock will **acknowledge**
- Controller (host) will send a separate start bit
- Controller (host) sends the read address
- IDT clock will **acknowledge**
- IDT clock will send the data byte count = X
- IDT clock sends Byte N+X-1
- IDT clock sends **Byte 0 through Byte X (if X<sub>(H)</sub> was written to Byte 8)**
- Controller (host) will need to acknowledge each byte
- Controller (host) will send a not acknowledge bit
- Controller (host) will send a stop bit

| Index Block Read Operation |                 |        |                      |

## NOTES:

- 1 ALL DIMENSIONING AND TOLERANCING CONFORM TO ANSI Y14.5M-1982
- 2 DATUMS **—A—** AND **—B—** TO BE DETERMINED AT DATUM PLANE **—H—**
- 3 DIMENSION E TO BE DETERMINED AT SEATING PLANE **—C—**
- 4 DIMENSIONS D AND E1 ARE TO BE DETERMINED AT DATUM PLANE **—H—**
- 5 DIMENSION D DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS. MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED .15 mm PER SIDE
- 6 DIMENSION E1 DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS. INTERLEAD FLASH OR PROTRUSIONS SHALL NOT EXCEED .25 mm PER SIDE
- 7 DETAIL OF PIN 1 IDENTIFIER IS OPTIONAL BUT MUST BE LOCATED WITHIN THE ZONE INDICATED
- 8 LEAD WIDTH DIMENSION DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION IS .08 mm IN EXCESS OF THE LEAD WIDTH DIMENSION AT MAXIMUM MATERIAL CONDITION. DAMBAR CANNOT BE LOCATED ON THE LOWER RADIUS OR THE FOOT
- 9 THESE DIMENSIONS APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN .10 AND .25 mm FROM THE LEAD TIP
- 10 ALL DIMENSIONS ARE IN MILLIMETERS
- 11 THIS OUTLINE CONFORMS TO JEDEC PUBLICATION 95 REGISTRATION MO-153, VARIATION ED, EE & EF

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
