

IS31AP4990D

1.2W AUDIO POWER AMPLIFIER WITH ACTIVE-LOW SHUTDOWN MODE

October 2012

DESCRIPTION

The IS31AP4990D has been designed for demanding audio applications such as mobile phones and permits the reduction of the number of external components.

It is capable of delivering 1.2W of continuous RMS output power into an 8Ω load @ 5V.

An externally-controlled shutdown mode reduces the supply current to less than 1μA. It also includes internal thermal shutdown protection.

The unity-gain stable amplifier can be configured by external gain setting resistors.

FEATURES

- Operating from $V_{DD} = 2.7V$ to 5.5V
- 1.2W output power @ $V_{DD} = 5V$, THD+N= 1%,
- $f = 1kHz$, with 8Ω load
- Ultra-low consumption in shutdown mode (1μA)
- Near-zero pop & click
- Ultra-low distortion
- Unity gain stable
- UTQFN-9L (1.5mm × 1.5mm) package

APPLICATIONS

- Mobile phones
- PDAs
- Portable electronic devices
- Notebook computer

PIN CONFIGURATION

Package	Pin Configuration (Top View)
UTQFN-9L	

PIN DESCRIPTION

No.	Pin	Function Description
A1	IN-	Negative input of the first amplifier. Connected to the feedback resistor R_F and to the input resistor R_I .
A2	OUT-	Negative output. Connected to the load and to the feedback resistor R_F .
A3	IN+	Positive input of the first amplifier.
B1,B2	GND	Ground.
B3	VDD	Supply voltage.
C1	BYPASS	Bypass capacitor pin which provides the common mode voltage ($V_{DD}/2$).
C2	OUT+	Positive output. Connected to the load.
C3	SDB	The device enters in shutdown mode when a low level is applied on this pin.

IS31AP4990D

ABSOLUTE MAXIMUM RATINGS (Note 1)

Supply voltage, V_{DD}	-0.3V ~ +6.0V
Voltage at any input pin	-0.3V ~ $V_{DD}+0.3V$
Maximum junction temperature, T_{JMAX}	150°C
Storage temperature range, T_{STG}	-65°C ~ +150°C
Operating temperature range, T_A	-40°C ~ +85°C

Note 1: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other condition beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note 2: The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{JMAX} , θ_{JA} , and the ambient temperature T_A . The maximum allowable power dissipation is $P_{DMAX} = (T_{JMAX} - T_A) / \theta_{JA}$ or the number given in Absolute Maximum Ratings, whichever is lower. For the IS31AP4990D, see power derating curves for additional information.

ELECTRICAL CHARACTERISTICS

$T_A = -40^\circ\text{C} \sim +85^\circ\text{C}$, $V_{DD} = 2.7V \sim 5.5V$, unless otherwise noted. Typical value are $T_A = +25^\circ\text{C}$.

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
V_{DD}	Power supply		2.7		5.5	V
I_{DD}	Quiescent current	$V_{DD} = 5V$, $V_{IN} = 0V$, $I_O = 0A$, no load		3.8	6.4	mA
		$V_{DD} = 3V$, $V_{IN} = 0V$, $I_O = 0A$, no load		2.8	5.1	
I_{SD}	Shutdown current	$V_{SDB} = GND$, no load			1	μA
V_{IH}	Shutdown voltage input high		1.4			V
V_{IL}	Shutdown voltage input low				0.4	V
V_{OS}	Output offset voltage				25	mV
P_o	Output power (8 Ω)	$V_{DD} = 5V$	THD+N = 1%, f = 1kHz	1.20		W
			THD+N = 10%, f = 1kHz	1.50		
		$V_{DD} = 3V$	THD+N = 1%, f = 1kHz	0.418		
			THD+N = 10%, f = 1kHz	0.525		
t_{WU}	Wake-up time (Note 3)	$V_{DD} = 5V$, $C_{BYPASS} = 1\mu F$		115		ms
		$V_{DD} = 3V$, $C_{BYPASS} = 1\mu F$		102		
THD+N	Total harmonic distortion + noise (Note 3)	$V_{DD} = 5V$, $P_O = 0.5W_{rms}$, f = 1kHz		0.23		%
		$V_{DD} = 3V$, $P_O = 0.3W_{rms}$, f = 1kHz		0.15		
PSRR	Power supply rejection ratio (Note 3)	$V_{DD} = 5V$ $V_{Ripple\ p-p} = 200mV$ Input grounded	f = 217Hz	61		dB
			f = 1kHz	65		
		$V_{DD} = 3.6V, 4.2V$ $V_{Ripple\ p-p} = 200mV$ Input grounded	f = 217Hz	62		
			f = 1kHz	66		

Note 3: Guaranteed by design.

APPLICATION INFORMATION

BTL CONFIGURATION PRINCIPLE

The IS31AP4990D is a monolithic power amplifier with a BTL output type. BTL (bridge tied load) means that each end of the load is connected to two single-ended output amplifiers. Thus, we have:

$$\text{Single-ended output 1} = V_{OUT+} = V_{OUT} \text{ (V)}$$

$$\text{Single ended output 2} = V_{OUT-} = -V_{OUT} \text{ (V)}$$

$$\text{and } V_{OUT+} - V_{OUT-} = 2V_{OUT} \text{ (V)}$$

The output power is:

$$P_{OUT} = \frac{(2V_{OUT_{RMS}})^2}{R_L}$$

For the same power supply voltage, the output power in BTL configuration is four times higher than the output power in single ended configuration.

GAIN IN A TYPICAL APPLICATION SCHEMATIC

The typical application schematic is shown in Figure 1 on page 1.

In the flat region (no C_{IN} effect), the output voltage of the first stage is (in Volts):

$$V_{OUT-} = (-V_{IN}) \frac{R_F}{R_{IN}}$$

For the second stage: $V_{OUT+} = -V_{OUT-}$ (V)

The differential output voltage is (in Volts):

$$V_{OUT+} - V_{OUT-} = 2V_{IN} \frac{R_F}{R_{IN}}$$

The differential gain, G_v , in shourt, is given by:

$$G_v = \frac{V_{OUT+} - V_{OUT-}}{V_{IN}} = 2 \frac{R_F}{R_{IN}}$$

V_{OUT+} is in phase with V_{IN} and V_{OUT-} is phased 180° with V_{IN} . This means that the positive terminal of the loudspeaker should be connected to V_{OUT+} and the negative to V_{OUT-} .

LOW AND HIGH FREQUENCY RESPONSE

In the low frequency region, C_{IN} starts to have an effect. C_{IN} forms with R_{IN} a high-pass filter with a -3dB cut-off frequency. f_{CL} is in Hz.

$$f_{CL} = \frac{1}{2\pi R_{IN} C_{IN}}$$

In the high frequency region, you can limit the bandwidth by adding a capacitor (C_F) in parallel with R_F . It forms a low-pass filter with a -3dB cut-off frequency. f_{CH} is in Hz.

$$f_{CH} = \frac{1}{2\pi R_F C_F}$$

DECOUPLING OF THE CIRCUIT

Two capacitors are needed to correctly bypass the IS31AP4990D: a power supply bypass capacitor C_S and a bias voltage bypass capacitor C_{BYPASS} .

C_S has particular influence on the THD+N in the high frequency region (above 7kHz) and an indirect influence on power supply disturbances. With a value for C_S of 1μF, you can expect THD+N levels similar to those shown in the datasheet.

In the high frequency region, if C_S is lower than 1μF, it increases THD+N and disturbances on the power supply rail are less filtered.

On the other hand, if C_S is higher than 1μF, those disturbances on the power supply rail are more filtered.

C_{BYPASS} has an influence on THD+N at lower frequencies, but its function is critical to the final result of PSRR (with input grounded and in the lower frequency region).

If C_{BYPASS} is lower than 1μF, THD+N increases at lower frequencies and PSRR worsens.

If C_{BYPASS} is higher than 1μF, the benefit on THD+N at lower frequencies is small, but the benefit to PSRR is substantial.

Note that C_{IN} has a non-negligible effect on PSRR at lower frequencies. The lower the value of C_{IN} , the higher the PSRR is.

WAKE-UP TIME (t_{WU})

When the SDB pin is released to put the device ON, the bypass capacitor C_{BYPASS} will not be charged immediately. As C_{BYPASS} is directly linked to the bias of the amplifier, the bias will not work properly until the C_{BYPASS} voltage is correct. The time to reach this voltage is called wake-up time or t_{WU} and specified in the electrical characteristics table with $C_{BYPASS} = 1\mu F$.

POP PERFORMANCE

Pop performance is intimately linked with the size of the input capacitor C_{IN} and the bias voltage bypass capacitor C_{BYPASS} .

The size of C_{IN} is dependent on the lower cut-off frequency and PSRR values requested. The size of C_{BYPASS} is dependent on THD+N and PSRR values requested at lower frequencies.

Moreover, C_{BYPASS} determines the speed with which the amplifier turns ON.

PACKAGING INFORMATION

UTQFN-9L

Note: All dimensions in millimeters unless otherwise stated.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
