

## THERMAL INTERFACE MATERIAL PART NUMBER GUIDE

All of the heat sinks shown in this catalog are available with any of the following thermal tape and interface materials, pre-applied at the factory. Use the “T” series, thermally enhanced, pressure sensitive adhesives to attach the heat sink to the electronic package and provide a good thermal link to the heat sink. The “S” series interface materials have adhesives on only one side, for pre-attachment to the heat sink, and provide superior thermal performance. Specify these materials in applications where the heat sink will be fixed to the electronic package by some mechanical means other than a tape. Please note that none of these materials are for use in applications requiring electrical isolation from the electronic device. All options other than -T1 and -T4 are RoHS compliant.

Note: To obtain the estimated thermal resistance of the interface material in your application, divide the thermal impedance value by the area of the pad in square inches. For example, a 2” x 2” piece of T4 has a resistance of  $1.10 \text{ C-in}^2/\text{W} \div 4 \text{ in}^2 = 0.275 \text{ C/W}$

## ORDERING INFORMATION

Once you have chosen heat sink and thermal interface material that meets your thermal & mechanical requirements it is easy to designate the part number. Simply add the interface material suffix referenced on the chart above to the base part number for the heat sink. The base part number already includes information regarding its size and finish.

Example:

To order the 658 Series heat sink at .350” tall with the T5 thermal interface material, specify part number:

658-35AB - T5

### 650/651 SERIES

Low-Cost Heat Sinks for DIPs and SRAMs

14-16 Pin DIPs

Standard P/N	Length in. (mm)	Width in. (mm)	Height in. (mm)	Typical Applications	Weight lbs. (grams)
650B	0.250 (6.4)	0.740 (18.9)	0.240 (6.1)	14-Pin, 16-Pin DIP	0.003 (1.36)

These extruded heat sinks serve as low-cost heat dissipation solutions for DIPs with pin counts from 14 to 16. Use an epoxy such as Wakefield Engineering DeltaBond™ 152 or 155, or use Wakefield 2-part DeltaBond™ 156 modified

acrylic adhesive. The 650 and 651 are also available in natural aluminum finish. They can be ordered as 650P or 651P.

#### MECHANICAL DIMENSIONS

Notes:

1. Finish: black anodize
2. TIR: Total Indicator Reading. This is a measure of flatness across the greatest dimension of a surface.

#### NATURAL AND FORCED CONVECTION CHARACTERISTICS

The graph plots Thermal Resistance (°C/W) on the y-axis (0 to 100) against Heat Dissipated (Watts) on the x-axis (0 to 2.5). Two curves are shown: one for Natural Convection (higher resistance) and one for Forced Convection (lower resistance). The forced convection curve shows a significant decrease in thermal resistance as heat dissipation increases, reaching approximately 10°C/W at 2.5W.
