

ISL9012

Dual LDO with Low Noise, Low I_Q, and High PSRR

FN9220

Rev 4.00

December 10, 2015

ISL9012 is a high performance dual LDO capable of sourcing 150mA current from Channel 1, and 300mA from Channel 2. The device has a low standby current and high-PSRR and is stable with output capacitance of 1µF to 10µF with ESR of up to 200mΩ.

The device integrates a Power-On-Reset (POR) function for the VO2 output. The POR delay for VO2 can be externally programmed by connecting a timing capacitor to the CPOR pin. A reference bypass pin is also provided for connecting a noise-filtering capacitor for low noise and high PSRR applications.

The quiescent current is typically only 45µA with both LDO's enabled and active. Separate enable pins control each individual LDO output. When both enable pins are low, the device is in shutdown, typically drawing less than 0.1µA.

Several combinations of voltage outputs are standard. Output voltage options for each LDO range from 1.5V to 3.3V. Other output voltage options are available on request.

Pinout

Features

- Integrates two high performance LDOs
 - VO1 - 150mA output
 - VO2 - 300mA output
- Excellent transient response to large current steps
- Excellent load regulation:
 - 1% voltage change across full range of load current
- High PSRR: 70dB @ 1kHz
- Wide input voltage capability: 2.3V to 6.5V
- Extremely low quiescent current: 45µA (both LDOs on)
- Low dropout voltage: typically 120mV @ 150mA
- Low output noise: typically 30µV_{RMS} @ 100µA (1.5V)
- Stable with 1 to 10µF ceramic capacitors
- Separate enable pins for each LDO
- POR output, with adjustable delay time indicates when the VO2 output is good
- Soft-start to limit input current surge during enable
- Current limit and overheat protection
- ±1.8% accuracy over all operating conditions
- Tiny 10 Ld 3x3mm DFN package
- -40°C to +85°C operating temperature range
- Pin compatible with Micrel MIC2212
- Pb-free (RoHS compliant)

Applications

- PDAs, Cell Phones and Smart Phones
- Portable Instruments, MP3 Players
- Handheld Devices including Medical Handhelds

Ordering Information

NOTES:

1. Add "-T" suffix for tape and reel. Please refer to TB347 for details on reel specifications.
2. For other output voltages, contact Intersil Marketing.
3. These Intersil Pb-free plastic packaged products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate PLUS ANNEAL - e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

Absolute Maximum Ratings

| | |
|----------------------------|----------------------|
| Supply Voltage (VIN) | +7.1V |
| VO1, VO2 Pin | +3.6V |
| All Other Pins | -0.3 to (VIN + 0.3)V |

Recommended Operating Conditions

| | |
|--------------------------------------|----------------|
| Ambient Temperature Range (TA) | -40°C to +85°C |
| Supply Voltage (VIN) | 2.3V to 6.5V |

Thermal Information

| | | |
|-----------------------------------|---|----------------------|
| Thermal Resistance (Notes 4, 5) | θ_{JA} (°C/W) | θ_{JC} (°C/W) |
| 3x3 DFN Package | 50 | 10 |
| Junction Temperature Range | -40°C to +125°C | |
| Operating Temperature Range | -40°C to +85°C | |
| Storage Temperature Range | -65°C to +150°C | |
| Pb-free Reflow Profile | see link below http://www.intersil.com/pbfree/Pb-FreeReflow.asp | |

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

- θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief TB379.
- θ_{JC} , "case temperature" location is at the center of the exposed metal pad on the package underside. See Tech Brief TB379.

Electrical Specifications

Unless otherwise noted, all parameters are guaranteed over the operational supply voltage and temperature range of the device as follows:

TA = -40°C to +85°C; VIN = (VO + 0.5V) to 6.5V with a minimum VIN of 2.3V; CIN = 1µF; CO = 1µF;
CBYP = 0.01µF; CPOR = 0.01µF

| PARAMETER | SYMBOL | TEST CONDITIONS | MIN (Note 8) | TYP | MAX (Note 8) | UNITS |

Pin Description

| PIN NUMBER | PIN NAME | TYPE | DESCRIPTION |
|------------|-------------------------|-----------------------------------|--|
| 1 | VIN | Analog I/O | Supply Voltage/LDO Input: Connect a 1 μ F capacitor to GND. |
| 2 | EN1 | Low Voltage Compatible CMOS Input | LDO-1 Enable. |
| 3 | EN2 | Low Voltage Compatible CMOS Input | LDO-2 Enable. |
| 4 | CBYP | Analog I/O | Reference Bypass Capacitor Pin: Optionally connect capacitor of value 0.01 μ F to 1 μ F between this pin and GND to tune in the desired noise and PSRR performance. |
| 5 | CPOR | Analog I/O | POR Delay Setting Capacitor Pin: Connect a capacitor between this pin and GND to delay the $\overline{\text{POR}}$ output release after LDO-2 output reaches 94% of its specified voltage level (200ms delay per 0.01 μ F). |
| 6 | GND | Ground | GND is the connection to system ground. Connect to PCB Ground plane. |
| 7 | NC | NC | No Connection. |
| 8 | $\overline{\text{POR}}$ | Open Drain Output (1mA) | Open-drain POR Output for LDO-2 (active-low). |
| 9 | VO2 | Analog I/O | LDO-2 Output: Connect capacitor of value 1 μ F to 10 μ F to GND (1 μ F recommended). |
| 10 | VO1 | Analog I/O | LDO-1 Output: Connect capacitor of value 1 μ F to 10 μ F to GND (1 μ F recommended). |

Typical Application

C1, C4, C5: 1 μ F X5R CERAMIC CAPACITOR
 C2: 0.01 μ F X5R CERAMIC CAPACITOR
 C3: 0.01 μ F X5R CERAMIC CAPACITOR
 R1: 100k Ω RESISTOR, 5%

Block Diagram

Functional Description

The ISL9012 contains all circuitry required to implement two high performance LDO's. High performance is achieved through a circuit that delivers fast transient response to varying load conditions. In a quiescent condition, the ISL9012 adjusts its biasing to achieve the lowest standby current consumption.

The device also integrates current limit protection, smart thermal shutdown protection, staged turn-on and soft-start. Smart Thermal shutdown protects the device against overheating. Staged turn-on and soft-start minimize start-up input current surges without causing excessive device turn-on time.

Power Control

The ISL9012 has two separate enable pins, EN1 and EN2, to individually control power to each of the LDO outputs. When both EN1 and EN2 are low, the device is in shutdown

mode. During this condition, all on-chip circuits are off, and the device draws minimum current, typically less than 0.1 μ A. When one or both of the enable pins are asserted, the device first polls the output of the UVLO detector to ensure that VIN voltage is at least about 2.1V. Once verified, the device initiates a start-up sequence. During the start-up sequence, trim settings are first read and latched. Then, sequentially, the bandgap, reference voltage and current generation circuitry power up. Once the references are stable, a fast-start circuit quickly charges the external reference bypass capacitor (connected to the CBYP pin) to the proper operating voltage. After the bypass capacitor has been charged, the LDO's power up.

If EN1 is brought high, and EN2 goes high before the VO1 output stabilizes, the ISL9012 delays the VO2 turn-on until the VO1 output reaches its target level.

If EN2 is brought high, and EN1 goes high before VO2 starts its output ramp, then VO1 turns on first and the ISL9012

delays the VO2 turn-on until the VO1 output reaches its target level.

If EN2 is brought high, and EN1 goes high after VO2 starts its output ramp, then the ISL9012 immediately starts to ramp up the VO1 output.

If both EN1 and EN2 are high, the VO1 output has priority, and is always powered up first.

During operation, whenever the VIN voltage drops below about 1.8V, the ISL9012 immediately disables both LDO outputs. When VIN rises back above 2.1V, the device re-initiates its start-up sequence and LDO operation will resume automatically.

Reference Generation

The reference generation circuitry includes a trimmed bandgap, a trimmed voltage reference divider, a trimmed current reference generator, and an RC noise filter. The filter includes the external capacitor connected to the CBYP pin. A 0.01 μ F capacitor connected CBYP implements a 100Hz lowpass filter, and is recommended for most high performance applications. For the lowest noise application, a 0.1 μ F or greater CBYP capacitor should be used. This filters the reference noise to below the 10Hz to 1kHz frequency band, which is crucial in many noise-sensitive applications.

The bandgap generates a zero temperature coefficient (TC) voltage for the reference divider. The reference divider provides the regulation reference, POR detection thresholds, and other voltage references required for current generation and over-temperature detection.

The current generator outputs references required for adaptive biasing as well as references for LDO output current limit and thermal shutdown determination.

LDO Regulation and Programmable Output Divider

The LDO Regulator is implemented with a high-gain operational amplifier driving a PMOS pass transistor. The design of the ISL9012 provides a regulator that has low quiescent current, fast transient response, and overall stability across all operating and load current conditions. LDO stability is guaranteed for a 1 μ F to 10 μ F output capacitor that has a tolerance better than 20% and ESR less than 200m Ω . The design is performance-optimized for a 1 μ F capacitor. Unless limited by the application, use of an output capacitor value above 4.7 μ F is not recommended as LDO performance improvement is minimal.

Soft-start circuitry integrated into each LDO limits the initial ramp-up rate to about 30 μ s/V to minimize current surge. The ISL9012 provides short-circuit protection by limiting the output current to about 475mA.

Each LDO uses an independently trimmed 1V reference. An internal resistor divider drops the LDO output voltage down to 1V. This is compared to the 1V reference for regulation. The resistor division ratio is programmed in the factory to one of the

following output voltages: 1.5V, 1.8V, 1.85V, 2.5V, 2.6V, 2.7V, 2.8V, 2.85V, 2.9V, 3.0V, and 3.3V.

Power-On Reset Generation

LDO-2 has a Power-on Reset signal generation circuit which outputs to the POR pin. The POR signal is generated as follows:

A POR comparator continuously monitors the voltage of the LDO-2 output. The LDO enters a power-good state when the output voltage is above 94% of the expected output voltage for a period exceeding the LDO PGOOD entry delay time. In the power-good state, the open-drain POR output is in a high-impedance state. An external resistor can be added between the POR output and either LDO output or the input voltage, VIN.

The power-good state is exited when the LDO-2 output falls below 90% of the expected output voltage for a period longer than the PGOOD exit delay time. While power-good is false, the ISL9012 pulls the respective POR pin low.

The PGOOD entry and exit delays are determined by the value of the external capacitor connected to the CPOR pin. For a 0.01 μ F capacitor, the entry and exit delays are 200ms and 25 μ s respectively. Larger or smaller capacitor values will yield proportionately longer or shorter delay times. The POR exit delay should never be allowed to be less than 10 μ s to ensure sufficient immunity against transient induced false POR triggering.

Overheat Detection

The bandgap outputs a proportional-to-temperature current that is indicative of the temperature of the silicon. This current is compared with references to determine if the device is in danger of damage due to overheating. When the die temperature reaches about +145 $^{\circ}$ C, one or both of the LDO's momentarily shut down until the die cools sufficiently. In the overheat condition, only the LDO sourcing more than 50mA will be shut off. This does not affect the operation of the other LDO. If both LDOs source more than 50mA and an overheat condition occurs, both LDO outputs are disabled. Once the die temperature falls back below about +110 $^{\circ}$ C, the disabled LDO(s) are re-enabled and soft-start automatically takes place.

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to the web to make sure that you have the latest revision.

| DATE | REVISION | CHANGE |
|-------------------|----------|---|
| December 10, 2015 | FN9220.4 | Added Rev History beginning with Rev 4. Added About Intersil. Verbiage. Updated Ordering Information table on page 2 Updated POD L10.3x3C to most current version. Revision changes are as follows: Updated Format to new standard Removed package outline and included center to center distance between lands on recommended land pattern. Removed Note 4 "Dimension b applies to the metallized terminal and is measured between 0.18mm and 0.30mm from the terminal tip." since it is not applicable to this package. Renumbered notes accordingly. Tiebar Note 4 updated From: Tiebar shown (if present) is a non-functional feature. To: Tiebar shown (if present) is a non-functional feature and may be located on any of the 4 sides (or ends). |

About Intersil

Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at www.intersil.com.

You may report errors or suggestions for improving this datasheet by visiting www.intersil.com/ask.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
