Dual H-Bridge Driver with Boost Converter

■ GENERAL DESCRIPTION

The **NJW4814** is a dual H-bridge driver with boost converter IC.

It can boost the output voltage from Li-ion battery and/or a 5V power supply and drives a piezo device by two H- bridge drivers.

48ms of internal fixed soft start function of the boost circuit sets a limit to startup current.

The dual H-bridge drivers have independent signal inputs and a fault output function, therefore the NJW4814 improves controllability from a microcomputer.

The input frequency of H-bridge driver is up to 300kHz.

NJW4814MLE

■ FEATURES

● Boost Converter Block	Output Switch Voltage	40V max.
	Switching Current	1.5A min.
	PWM Control	
	Operating Voltage Range	2.7 to 5.5V
	Oscillation Frequency Range	380k to 1MHz
	Soft Start Function	48ms typ.
	Over Current Protection	
	Over Voltage Protection	
● H-Bridge Driver Block	Internal 2 Channel H-Bridge	
	Each Channel Operates Individually	
	Over Current Protection	±300mA typ.
	Operating Voltage Range	7.0 to 35V
	Switching Frequency	300kHz max.
	Output Shut Down Control	
	Fault Indicator Output	
● Under Voltage Lockout		
● Built-in Thermal Shutdown		
● Standby Function		
● Package Outline	NJW4814MLE : EQFN24-LE

■ PIN DESCRIPTIONS

PIN NAME	PIN NUMBER	FUNCTION
IN-	1	Output Voltage Detecting pin. Connects output voltage through the resistor divider tap to this pin in order to voltage of the IN- pin become 1.0V (typ.).
VDD_SW	2	Power Supply pin for SW.REG. block. Insert a bypass capacitor close to the VDD_SW pin – the GND pin connection in order to lower high frequency impedance.
STBYb	3	Standby Control pin. The STBYb pin is pulled down with 300kΩ (typ.) internally. Normal Operation at the time of High Level. Standby Mode at the time of Low Level or OPEN.
SHDNAb	4	Shutdown Control pin for H-Bridge driver Ach. The SHDNAb pin is pulled down with 300kΩ (typ.) internally. Normal Operation at the time of High Level. The FET of H-Bridge driver Ach becomes OFF (Hi-Z) by Low Level or OPEN.
SHDNBb	5	Shutdown Control pin for H-Bridge driver Bch. The function is same as 4pin.
INA1	6	Control input pin for H-Bridge driver Ach (one side). High Side SW Operation at the time of High Level. Low Side SW Operation at the time of Low Level.
INA2	7	Control input pin for H-Bridge driver Ach (one side). The function is same as 6pin.
INB1	8	Control input pin for H-Bridge driver Bch (one side). The function is same as 6pin.
INB2	9	Control input pin for H-Bridge driver Bch (one side). The function is same as 6pin.
FLT	10	FLT pin outputs a signal at the time of abnormality. You should be connected to the outside power supply through pull up resistance. Normally: FET is OFF (Output voltage High Level) Abnormality: FET is ON (Output voltage Low Level)
PGND	11	Power GND pin for H-Bridge driver (Note 1)
OUTA2	12	Output pin of H-Bridge driver Ach (one side). The output current is limited to 300mA (typ.) by the overcurrent protection function.
OUTA1	13	Output pin of H-Bridge driver Ach (one side). The function is same as 12pin.
PGND	14	Power GND pin for H-Bridge driver (Note 1)
OUTB1	15	Output pin of H-Bridge driver Bch (one side). The function is same as 12pin.

■ PIN DESCRIPTIONS (Continued)

PIN NAME	PIN NUMBER	FUNCTION
VDD_HB	16	Power Supply pin for H-Bridge driver block. Insert a bypass capacitor close to the VDD_HB pin – the GND pin connection in order to lower high frequency impedance.
VOVP	17	Overvoltage detection pin of SW.REG. When it detected overvoltage, the VOVP pin sinks a current and discharges the output voltage. VOVP pin should be connected to VDD_HB pin.
OUTB2	18	Output pin of H-Bridge driver Bch (one side). The function is same as 12pin.
SW	19	Switch Output pin for SW.REG. Power MOSFET
PGND	20	Power GND pin for SW.REG. (Note 1)
RADJ	21	The RADJ pin becomes the high impedance at standby. It prevents a current flowing into the output voltage setting resistor.
FB	22	Feedback Setting pin The feedback resistor and capacitor are connected between the FB pin and the IN- pin.
RT	23	Oscillating Frequency Setting pin by Timing Resistor. Oscillating Frequency should set between 380kHz and 1MHz.
GND	24	GND pin (Note 1)
Exposed PAD	–	Connect to GND.

(Note 1) GND and PGND are connected inside.

■ H Bridge Driver Block Over Current Protection

The overcurrent protection function operates when the high side SW current flows more than I_{DCTH} or the low side SW current flows more than I_{DCTL}. The overcurrent protection operates in three steps.

(1) Sensing step

·Turn off power MOSFET of the switching regulator
·Turn off power MOSFET of the H-bridge driver
·Reset a soft start
·Reset an FB pin voltage
·Connect a dummy road between VOVP pin-GND pin

(2) Output stop step

After the overcurrent detection, 500 ms (typ.) continues an output stop.

(3) Return step

After an output stop, the soft start operates. Then the IC operation shifts to normal operation.

OCEAN CHIPS
Океан Электроники
Поставка электронных компонентов

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «**JONHON**», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «**FORSTAR**».

AVIC JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
