

GENERAL DESCRIPTION

The XRP6658 is a synchronous current mode PWM step down (buck) converter capable of delivering up to 1Amp of current and optimized for portable battery-operated applications.

Based on a current-mode 1.5MHz constant frequency PWM control scheme, the XRP6658 reduces the overall component count and solution footprint. It provides low output voltage ripple and excellent line and load regulation. It also implements a PFM mode to improve light load efficiency as well as a 100% duty cycle LDO mode. Output voltage is adjustable to as low as 0.6V with a better than 3% accuracy while a low quiescent current supports the most stringent battery operating conditions.

Built-in over temperature and under voltage lock-out protections insure safe operations under abnormal operating conditions.

The XRP6658 is offered in a RoHS compliant, "green"/halogen free 5-pin SOT23 package.

PIN DESCRIPTION

Name	Pin Number	Description
VIN	1	Power Input Pin. Must be closely decoupled to GND pin with a 4.7 μ F or greater ceramic capacitor.
GND	2	Ground Signal
EN	3	Enable Pin. Minimum 1.2V to enable the device. Maximum 0.4V to shutdown the device.
VFB	4	Feedback Pin. Receives the feedback voltage from an external resistive divider across the output.
SW	5	Switch Pin. Must be connected to Inductor. This pin connects to the drains of the internal main and synchronous power MOSFET switches.

ORDERING INFORMATION

Refer to XRP6658's datasheet and/or www.exar.com for exact and up to date ordering information.

**USING THE EVALUATION BOARD****INITIAL SETUP**

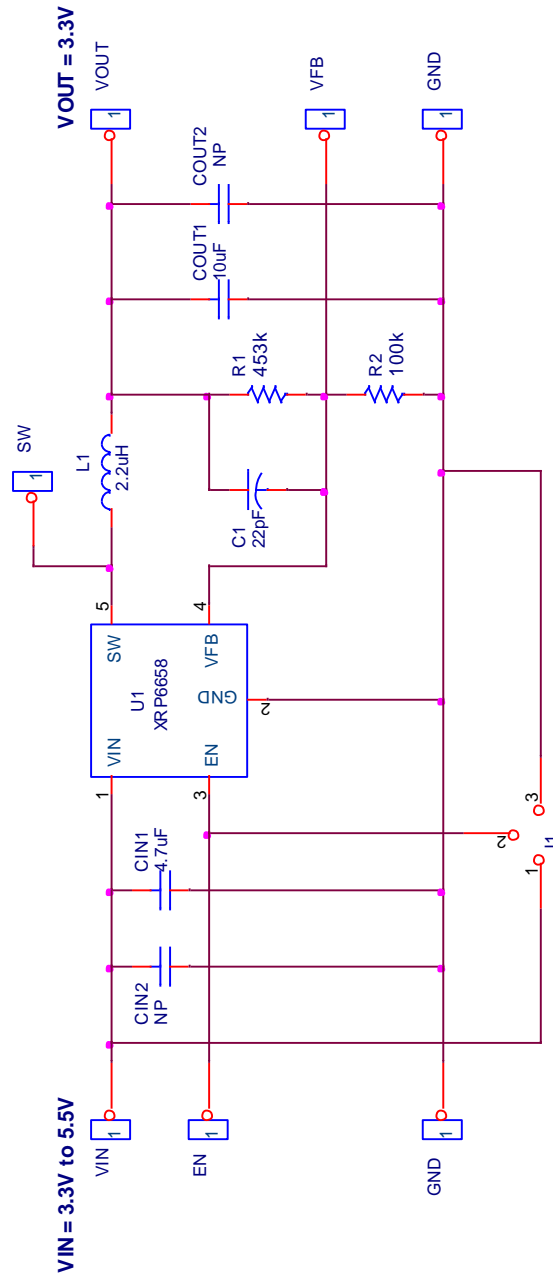

Set the input supply to a voltage between 2.5V to 5.5V and connect it to VIN and GND connectors on the left side of the evaluation board. Connect the load to the VOUT and GND connectors on the right hand side of the board. Check to make sure that jumper J1 is set to VIN. The board will power-up and regulate to the desired output voltage VOUT

set by the feedback resistors. The board will operate with a load current I_{OUT} of up to 1A and provide efficiency equal to figures 4 and 5 of XRP6658 datasheet.

JUMPER J1 FUNCTION

Jumper J1 can be used to either short EN pin to VIN or to GND. The Board is supplied from EXAR with the jumper set to connect EN to VIN.
