

## Ultra Small, Highly Accurate, Single Voltage Detector

## ■ GENERAL DESCRIPTION

The XC6126 series is an ultra small, highly accurate CMOS single voltage detector with very low power consumption. The device includes a highly accurate reference voltage source and uses laser trimming technologies, it maintains high accuracy over the full operation temperature range.

The device is available in both CMOS and N-channel open drain output configurations.

Ultra small package USPN-4B02 is ideally suited for small design of portable devices and high density mounting applications. The conventional package SSOT-24 is also available for upper compatible replacements.

## ■ APPLICATIONS

- Microprocessor logic reset circuitry
- System battery life and charge voltage monitors
- Memory battery back-up circuits
- Power-on reset circuits
- Power failure detection

## ■ FEATURES

<b>High Accuracy</b>	: $\pm 0.8\%$ (25°C)
<b>Temperature Characteristics</b>	: $\pm 50\text{ppm}/^\circ\text{C}$ (TYP.)
<b>Low Power Consumption</b>	: $0.6\ \mu\text{A}$ (TYP.) (Detect: $V_{DF}=1.8\text{V}$ , $V_{IN}=1.62\text{V}$ ) $0.7\ \mu\text{A}$ (TYP.) (Release: $V_{DF}=1.8\text{V}$ , $V_{IN}=1.98\text{V}$ )
<b>Operating Voltage Range</b>	: $0.7\text{V}\sim 6.0\text{V}$
<b>Detect Voltage Range</b>	: $1.5\text{V}\sim 5.5\text{V}$ (0.1V increments)
<b>Output Configuration</b>	: N-channel open drain output CMOS output
<b>Detect Logic</b>	: Active Low Reset
<b>Packages</b>	: USPN-4B02, SSOT-24
<b>Environmentally Friendly</b>	: EU RoHS Compliant, Pb Free

## ■ TYPICAL APPLICATION CIRCUIT

## ■ TYPICAL PERFORMANCE CHARACTERISTICS

- Detect Voltage vs. Ambient Temperature

## PIN CONFIGURATION

## PIN ASSIGNMENT

PIN NUMBER		PIN NAME	FUNCTIONS
USPN-4B02	SSOT-24		
1	4	$V_{IN}$	Power Input
2	3	$V_{OUT}$	Signal Output (Active Low)
3	1	NC	No connection
4	2	$V_{SS}$	Ground

## PRODUCT CLASSIFICATION

### Ordering Information

XC6126①②③④⑤⑥-⑦<sup>(\*)</sup>

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Output Configuration	C	CMOS Output
		N	N-ch Open Drain Output
②③	Detect Voltage	15~55	e.g. 2.7V → ②=2, ③=7
④	Detect Accuracy	A	±0.8%
⑤⑥-⑦ <sup>(*)</sup>	Packages (Order Unit)	7R-G	USPN-4B02 (5,000/Reel)
		NR-G	SSOT-24 (3,000/Reel)

<sup>(\*)</sup> The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

## ■ BLOCK DIAGRAMS

XC6126C Series

\* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

XC6126N Series

\* Diodes inside the circuits are ESD protection diodes.

## ■ ABSOLUTE MAXIMUM RATINGS

## OPERATIONAL EXPLANATION

### Typical Application Circuit

### Timing Chart

The above uses a timing chart to explain the operation of the circuit indicated in the operation explanation circuit schematic.

- (1) In the initial state, an input voltage ( $V_{IN}$ ) higher than the release voltage ( $V_{DR}$ ) is applied, and  $V_{IN}$  gradually drops.  
When a voltage higher than the detect voltage ( $V_{DFL}$ ) is applied to the input voltage ( $V_{IN}$ ), the output voltage ( $V_{OUT}$ ) is equal to the input voltage ( $V_{IN}$ ).  
\*On the N-ch open drain output product, the VOUT pin is in a high impedance state, and when the output is pulled up, the output voltage ( $V_{OUT}$ ) is equal to the pull-up voltage.
- (2) When the input voltage ( $V_{IN}$ ) drops below the detect voltage ( $V_{DFL}$ ), the output voltage ( $V_{OUT}$ ) is equal to the ground voltage ( $V_{SS}$ ). (Detection state)  
\*This also applies to the N-ch open drain output product.
- (3) If the input voltage ( $V_{IN}$ ) drops below the minimum operating voltage (0.7V), the output becomes unstable.  
\*If the output pin on the N-ch open drain output product is pulled up, the pull-up voltage may be output as the output voltage ( $V_{OUT}$ ).
- (4) The output voltage ( $V_{OUT}$ ) remains at the ground voltage as the input voltage ( $V_{IN}$ ) rises past the minimum operating voltage (0.7V) and reaches the release voltage ( $V_{DR}$ ).
- (5) If the input voltage ( $V_{IN}$ ) rises higher than the release voltage ( $V_{DR}$ ), the output voltage ( $V_{OUT}$ ) is equal to the input voltage ( $V_{IN}$ ).  
\*On the N-ch open drain output product, the VOUT pin is in a high impedance state, and if the output is pulled up, the pull-up voltage is output as the output voltage ( $V_{OUT}$ ) as in (1).
- (6) The difference between the release voltage ( $V_{DR}$ ) and the detect voltage ( $V_{DFL}$ ) is the hysteresis width ( $V_{HYS}$ ).

Note: For simplicity, the above explanation omits the circuit operation time.

## NOTE ON USE

1. Please use this IC within the stated maximum ratings. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Note that there is a possibility of malfunctioning if the input voltage changes sharply or undergoes repeated, cyclical changes.
3. If the resistance  $R_{IN}$  is connected between the  $V_{IN}$  pin and the power supply  $V_{DD}$ , the voltage drop due to the flow through current in the internal circuit and  $R_{IN}$  may cause oscillation when release takes place. When using the CMOS output product, oscillation due to  $R_{IN}$  and the flow through current may occur without relation to release and detection, and thus  $R_{IN}$  should not be connected.
4. Please use N-ch open drains configuration, when a resistor  $R_{IN}$  is connected between the  $V_{IN}$  pin and the power supply  $V_{DD}$ . In such cases, please ensure that  $R_{IN}$  is less than  $33k\Omega$ .

[Figure 1: Circuit connected with the input resistor fro N-ch open drain]

5. When N-ch open drain output is used, the  $V_{OUT}$  voltage at detection is determined by the pull-up resistance connected to the output pin. Select the resistance based on the following considerations:

$$\text{At detection: } V_{OUT} = (V_{pull-Up}) / (1 + R_{pull} / R_{ON})$$

$V_{pull-Up}$ : Voltage after pull-up

$R_{ON}(*1)$ : ON resistance of N-ch driver (calculated from  $V_{OUT}/I_{OUT1}$  based on electrical characteristics) (\*3)

Example:

When  $V_{IN} = 2.0V$  (\*2),  $R_{ON} = 0.5/4.5 \times 10^{-3} \cong 111 \Omega$  (MAX.) . If it is desired to make the  $V_{OUT}$  voltage at detection 0.1V or less when  $V_{pull-Up}$  is 3.0 V,

$$R_{pull} = (V_{pull-Up} / V_{OUT-1}) \times R_{ON} = (3/0.1-1) \times 111 \cong 3.2k\Omega$$

Therefore, to make the output voltage at detection 0.1 V or less under the above conditions, the pull-up resistance must be  $3.2k\Omega$  or higher.

(\*1) Note that  $R_{ON}$  becomes larger as  $V_{IN}$  becomes smaller.

(\*2) For  $V_{IN}$  in the calculation, use the lowest value of the input voltage range you will use.

(\*3)  $I_{OUT1}$  in the electrical characteristics is at  $T_a = 25^\circ C$ .  $I_{OUT1}$  varies depending on the ambient temperature.

To select a pull-up resistance taking ambient temperature into account, consult us.

$$\text{At release: } V_{OUT} = (V_{pull-Up}) / (1 + R_{pull} / R_{OFF})$$

$V_{pull-Up}$ : Voltage after pull-up

$R_{OFF}$ :  $40M\Omega$  (MIN.) resistance when N-ch driver is OFF (calculated from  $V_{OUT}/I_{LEAK}$  based on electrical characteristics)

Example:

Making  $V_{OUT}$  5.99 V or higher when  $V_{pull-Up}$  is 6.0 V:

$$R_{pull} = (V_{pull-Up} / V_{OUT-1}) \times R_{OFF} = (6/5.99-1) \times 40 \times 10^6 \cong 66k\Omega$$

Therefore, to make the output voltage at release 5.99 V or higher under the above conditions, the pull-up resistance must be  $66k\Omega$  or less.

6. Torex places an importance on improving our products and its reliability.

However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
