## DC – 6 GHz Gain Block

### Product Description

The TQP369185 is a general-purpose buffer amplifier that offers high dynamic range in a low-cost surface-mount package. At 1.9 GHz, the amplifier typically provides 19 dB gain, +31.7 dBm OIP3, and 4.6 dB Noise Figure while drawing 75 mA current. The device combines dependable performance with consistent quality to maintain MTTF values exceeding 100 years at mounting temperatures of +85°C. The device is housed in a lead-free/green/RoHS-compliant industry-standard SOT-89 package.

The TQP369185 consists of a Darlington-pair amplifier using Qorvo's high reliability InGaP/GaAs HBT process technology. Internal active bias enables operation with only DC-blocking capacitors and an RF choke on the DC bias feed. This broadband MMIC amplifier can be directly applied to various current and next generation wireless technologies such as CDMA, W-CDMA, and LTE. In addition, the TQP369185 will work for other various applications within the DC to 6 GHz frequency range.

## PCB Mounting Pattern

Notes:

1. All dimensions are in millimeters. Angles are in degrees.
2. Use 1 oz. copper minimum for top and bottom layer metal.
3. Vias are required under the backside paddle of this device for proper RF/DC grounding and thermal dissipation.
4. Do not remove or minimize via hole structure in the PCB. Thermal and RF grounding is critical.
5. We recommend a 0.35mm (#80/.0135") diameter bit for drilling via holes and a final plated thru diameter of 0.25 mm (0.01").
6. Ensure good package backside paddle solder attach for reliable operation and best electrical performance.
