

A New Direction in Mixed-Signal

January 2014

XRP9711EVB-DEMO-1

Quad Channel Digital PWM/PFM Demo Board Programmable Power Management System

Rev. 1.0.0

GENERAL DESCRIPTION

The XRP779711EVB-DEMO-1 board is a complete, four channel power system. It provides 1.5V, 1.2V 1.8V and 2.5V at maximum currents of 10A, 10A, 6A and 6A respectively. The 1.5V and 1.2V supplies can be adjusted in 2.5mV increments, the 1.8V and 2.5V supplies in 5mV increments. The order and ramp rates for each supply can be programmed to accommodate any sequencing requirement. All power supply operations can be controlled over an I²C interface. Faults, output voltages and currents can also be monitored. Two GPIO and three PSIO signals are available and can be programmed to provide a variety of functions. Unused GPIO/PSIO pins can be programmed as I/O expansion for a microcontroller. The board is supported by PowerArchitect™ 5.1 and plugs directly onto the interposer board acting as an interface to Arduino controller.

EVALUATION BOARD MANUAL

XRP9711EVB-DEMO-1

FEATURES

- **XRP9711 Programmable Power Module**
 - Channels 1 and 2 driving external power stages
 - Channel 3 and 4 internal converters
- **4 Channel Power System**
- **Wide Input Voltage Range: 5.5V-22V**
- **I²C Interface**
 - Programming
 - Monitoring
 - Control
- **Arduino GPIO, PSIO and ENABLE control**

PIN ASSIGNMENT

Figure 2 XRP9711 Pin Assignment

PIN DESCRIPTION

Pin #	Name	Description
1	BST2	Boost pin. High side driver supply input.
2	GH2	High Side Gate Drive Out. Connect directly to the gate of an external N-channel MOSFET.
3	LX2	Switch Node. Return for the high-side gate driver. Connect directly to the drain of the lower FET. Also used to measure voltage drop across bottom MOSFETs
4	GL2	Low Side Gate Drive Out. Connect directly to the gate of an external N-channel MOSFET.
5	GL_RT2	Low Side Gate Drive Return. This should be routed as a differential trace with GL. Connect to the source of the low side MOSFET.
6	BST1	Boost pin. High side driver supply input.
7	GH1	High Side Gate Drive Out. Connect directly to the gate of an external N-channel MOSFET.
8	LX1	Switch Node. Return for the high-side gate driver. Connect directly to the drain of the lower FET. Also used to measure voltage drop across bottom MOSFETs
9	GL1	Low Side Gate Drive Out. Connect directly to the gate of an external N-channel MOSFET.
10	GL_RT1	Low Side Gate Drive Return. This should be routed as a differential trace with GL. Connect to the source of the low side MOSFET.
11	ENABLE	Enable. If ENABLE is pulled high or allowed to float high, the chip is powered up. The pin must be held low for the XRP9711 to be placed into shutdown.
12	VCC	Controller Supply Voltage. Place a decoupling capacitor close to the controller IC. This input is used in UVLO fault generation.
13	AGND	Analog Ground. This is the small signal ground connection.
14	AGND	Analog Ground. This is the small signal ground connection.
15	VOU1	Feedback Pin. Connect to the output of the corresponding power stage
16	VOU2	Feedback Pin. Connect to the output of the corresponding power stage
17	VOU3	Feedback Pin. Connect to the output of the corresponding power stage
18	VOU4	Feedback Pin. Connect to the output of the corresponding power stage
19	GPIO0	I/O Logic Signal. Can be configured as input or output.
20	GPIO1	I/O Logic Signal. Can be configured as input or output.
21	SDA	I²C Data. SMBus/I ² C serial interface communication.
22	SCL	I²C Clock. SMBus/I ² C serial interface communication.
23	PSIO0	I/O Logic Signal, HV. Open drain, high voltage compliant. Can be configured as input or output.
24	PVOUT3	Channel Output Power. Output voltage for the internal channel.
25	PVOUT3	Channel Output Power. Output voltage for the internal channel.
26	PGND3	Channel Output Ground. Output ground for the internal channel.
27	PVIN	Channel Input Power. Internally connected to drain of upper switching MOSFET
28	PVIN	Channel Input Power. Internally connected to drain of upper switching MOSFET
29	LX3	Switch Node. Switch node of the internal channel.
30	LX3	Switch Node. Switch node of the internal channel.
31	LX3	Switch Node. Switch node of the internal channel.
32	PVIN	Channel Input Power. Internally connected to drain of upper switching MOSFET
33	PVIN	Channel Input Power. Internally connected to drain of upper switching MOSFET
34	LDO5	5V LDO Output. Used internally for power and may also be used for external power. LDO that can remain active while the rest of the IC is in standby mode.
35	AGND	Analog Ground. This is the small signal ground connection.
36	AGND	Analog Ground. This is the small signal ground connection.
37	LX4	Switch Node. Switch node of the internal channel.
38	PGND4	Channel Output Ground. Output ground for the internal channel.
39	AGND	Analog Ground. This is the small signal ground connection.

A New Direction in Mixed-Signal

XRP9711EVB-DEMO-1

Quad Channel Digital PWM/PFM Demo Board Programmable Power Management System

Pin #	Name	Description
40	LX4	Switch Node. Switch node of the internal channel.
41	PVOUT4	Channel Output Power. Output voltage for the internal channel.
42	PSIO1	I/O Logic Signal, HV. Open drain, high voltage compliant. Can be configured as input or output.
43	PSIO2	I/O Logic Signal, HV. Open drain, high voltage compliant. Can be configured as input or output.
44	LX4	Switch Node. Switch node of the internal channel.
45	PVOUT4	Channel Output Power. Output voltage for the internal channel.

ORDERING INFORMATION

Refer to XRP9711's datasheet and/or www.exar.com for exact and up to date ordering information.

USING THE EVALUATION BOARD

INPUT VOLTAGE RANGE

The input voltage range of XRP9711EVB-DEMO-1 board is from 5.5V to 22V. The power components have been optimized for a 12V input rail. When running the board at an input voltage other than 12V, use PowerArchitect™ 5.1 (PA5.1) to evaluate the system performance.

I²C INTERFACE

The XRP9711 programmable power module employs a standard I²C interface. Although the I²C signals can be pulled up to LDO5 on board by means of installing jumpers at the locations JP1, JP2 and JP3, the I²C bus signals are pulled up on the controller interface board by default (refer to Appendix – jumpers installed shorting pins 2 and 3 together at the locations JP6 and JP7).

OPERATING THE EVALUATION BOARD

The XRP9711EVB-DEMO-1 is designed to be powered from either an AC/DC wall wart (the output voltage must be in the range of 5.5V to 22V) connected to the barrel connector or a test bench DC power supply (the voltage must be in the range of 5.5V to 22V) connected to the V_{IN} connectors.

BRING UP PROCEDURE

Plug the XRP9711EVB-DEMO-1 evaluation board to the controller interface board as shown below.

Load the PowerArchitect™ 5.1 software and run it.

After selecting the proper family (Modules) and the device (XRP9711), select the “Get Started with the EVB-DEMO-1” option when prompted as shown below.

When done, click “Create”. PA 5.1 will load the default XRP9711EVB-DEMO-1 configuration automatically.

Apply power to the board. Please refer to the sections above on how to properly supply power to the board and what voltage range to use.

Turn on the Power supply.

Use USB cable to connect the computer (type A) and the Arduino controller board (type B).

Go to the Tools tab in PA 5.1 and select Boards. The software will identify communication ports where it found the Arduino controller board. Select the port.

PA 5.1 is now communicating with the Arduino controller board which is indicated in the lower left corner.

Programming the Configuration onto XRP9711

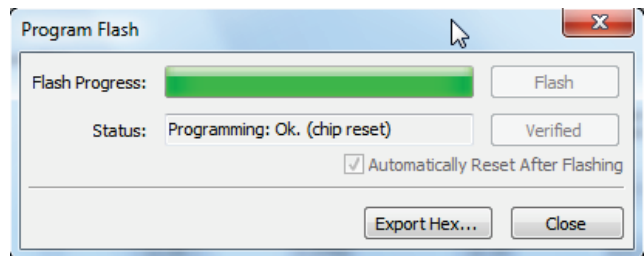

To program a configuration go to the Tools tab in PA 5.1 and select Program Flash.

The program Flash window will appear.

Click the Flash button.

PA 5.1 will go through the process of loading configuration in the flash. Once it has successfully completed the flash, it will report the outcome as seen above and reset the device if "Automatically Reset After Flashing" box checked (default option).

Close the window.

Note that XRP9711EVB-DEMO-1 boards will be pre-loaded with the default configuration.

Regulation

To enable channel regulation go to the Tools tab in PA 5.1 and select Dashboard.

In Dashboard turn Group 1 and Group 2 on. The configuration groups the channels 1 and 2 into the group 1, and the channels 3 and 4 into the group 2. The channels are now in regulation as indicated by V_{OUT} readings as well as the in-regulation indicators.

Channels can be turned on individually if desired.

GPIO and PISO interface

The GPIOs, PSIOs and ENABLE can be controlled from the Arduino controller dynamically in the dashboard.

ENABLE signal is connected to the Arduino controller board by default (JP4 header is shorted). Arduino drives the ENABLE pin low to place XRP9711 into the shutdown mode. It releases the ENABLE pin to enable the device. If leaving the ENABLE pin floating is desired, the jumper at JP4 shall be removed.

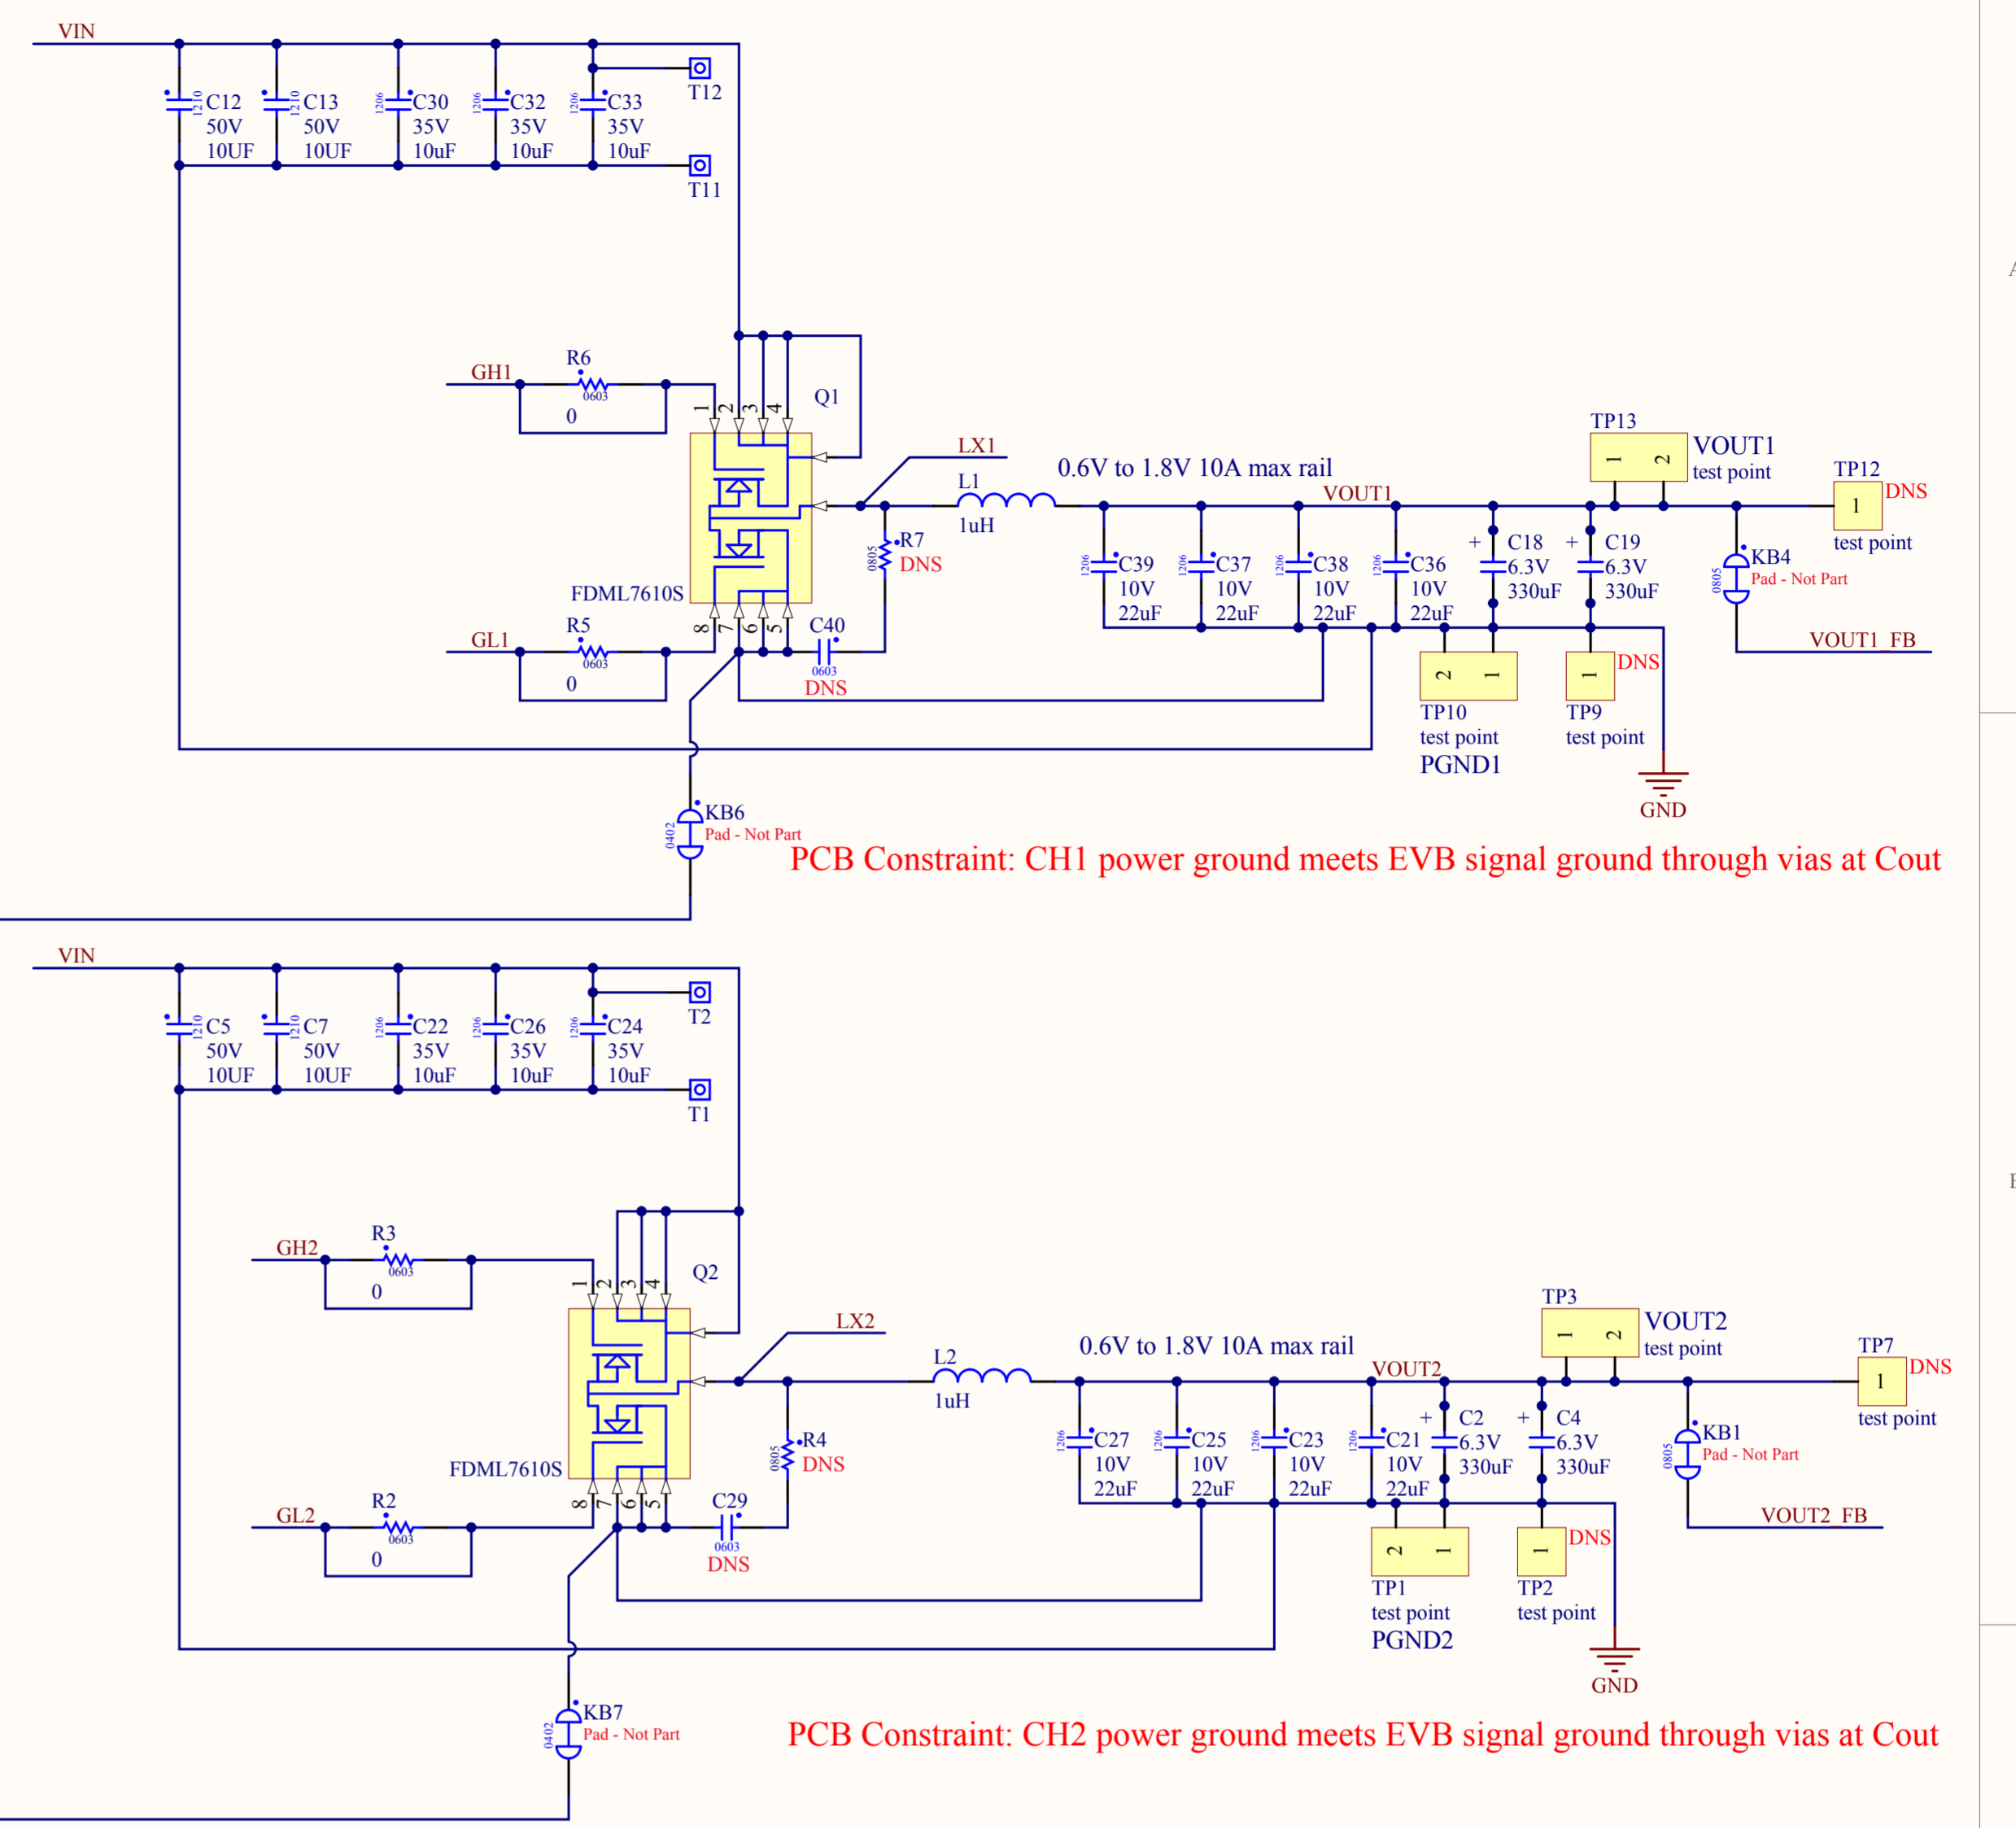

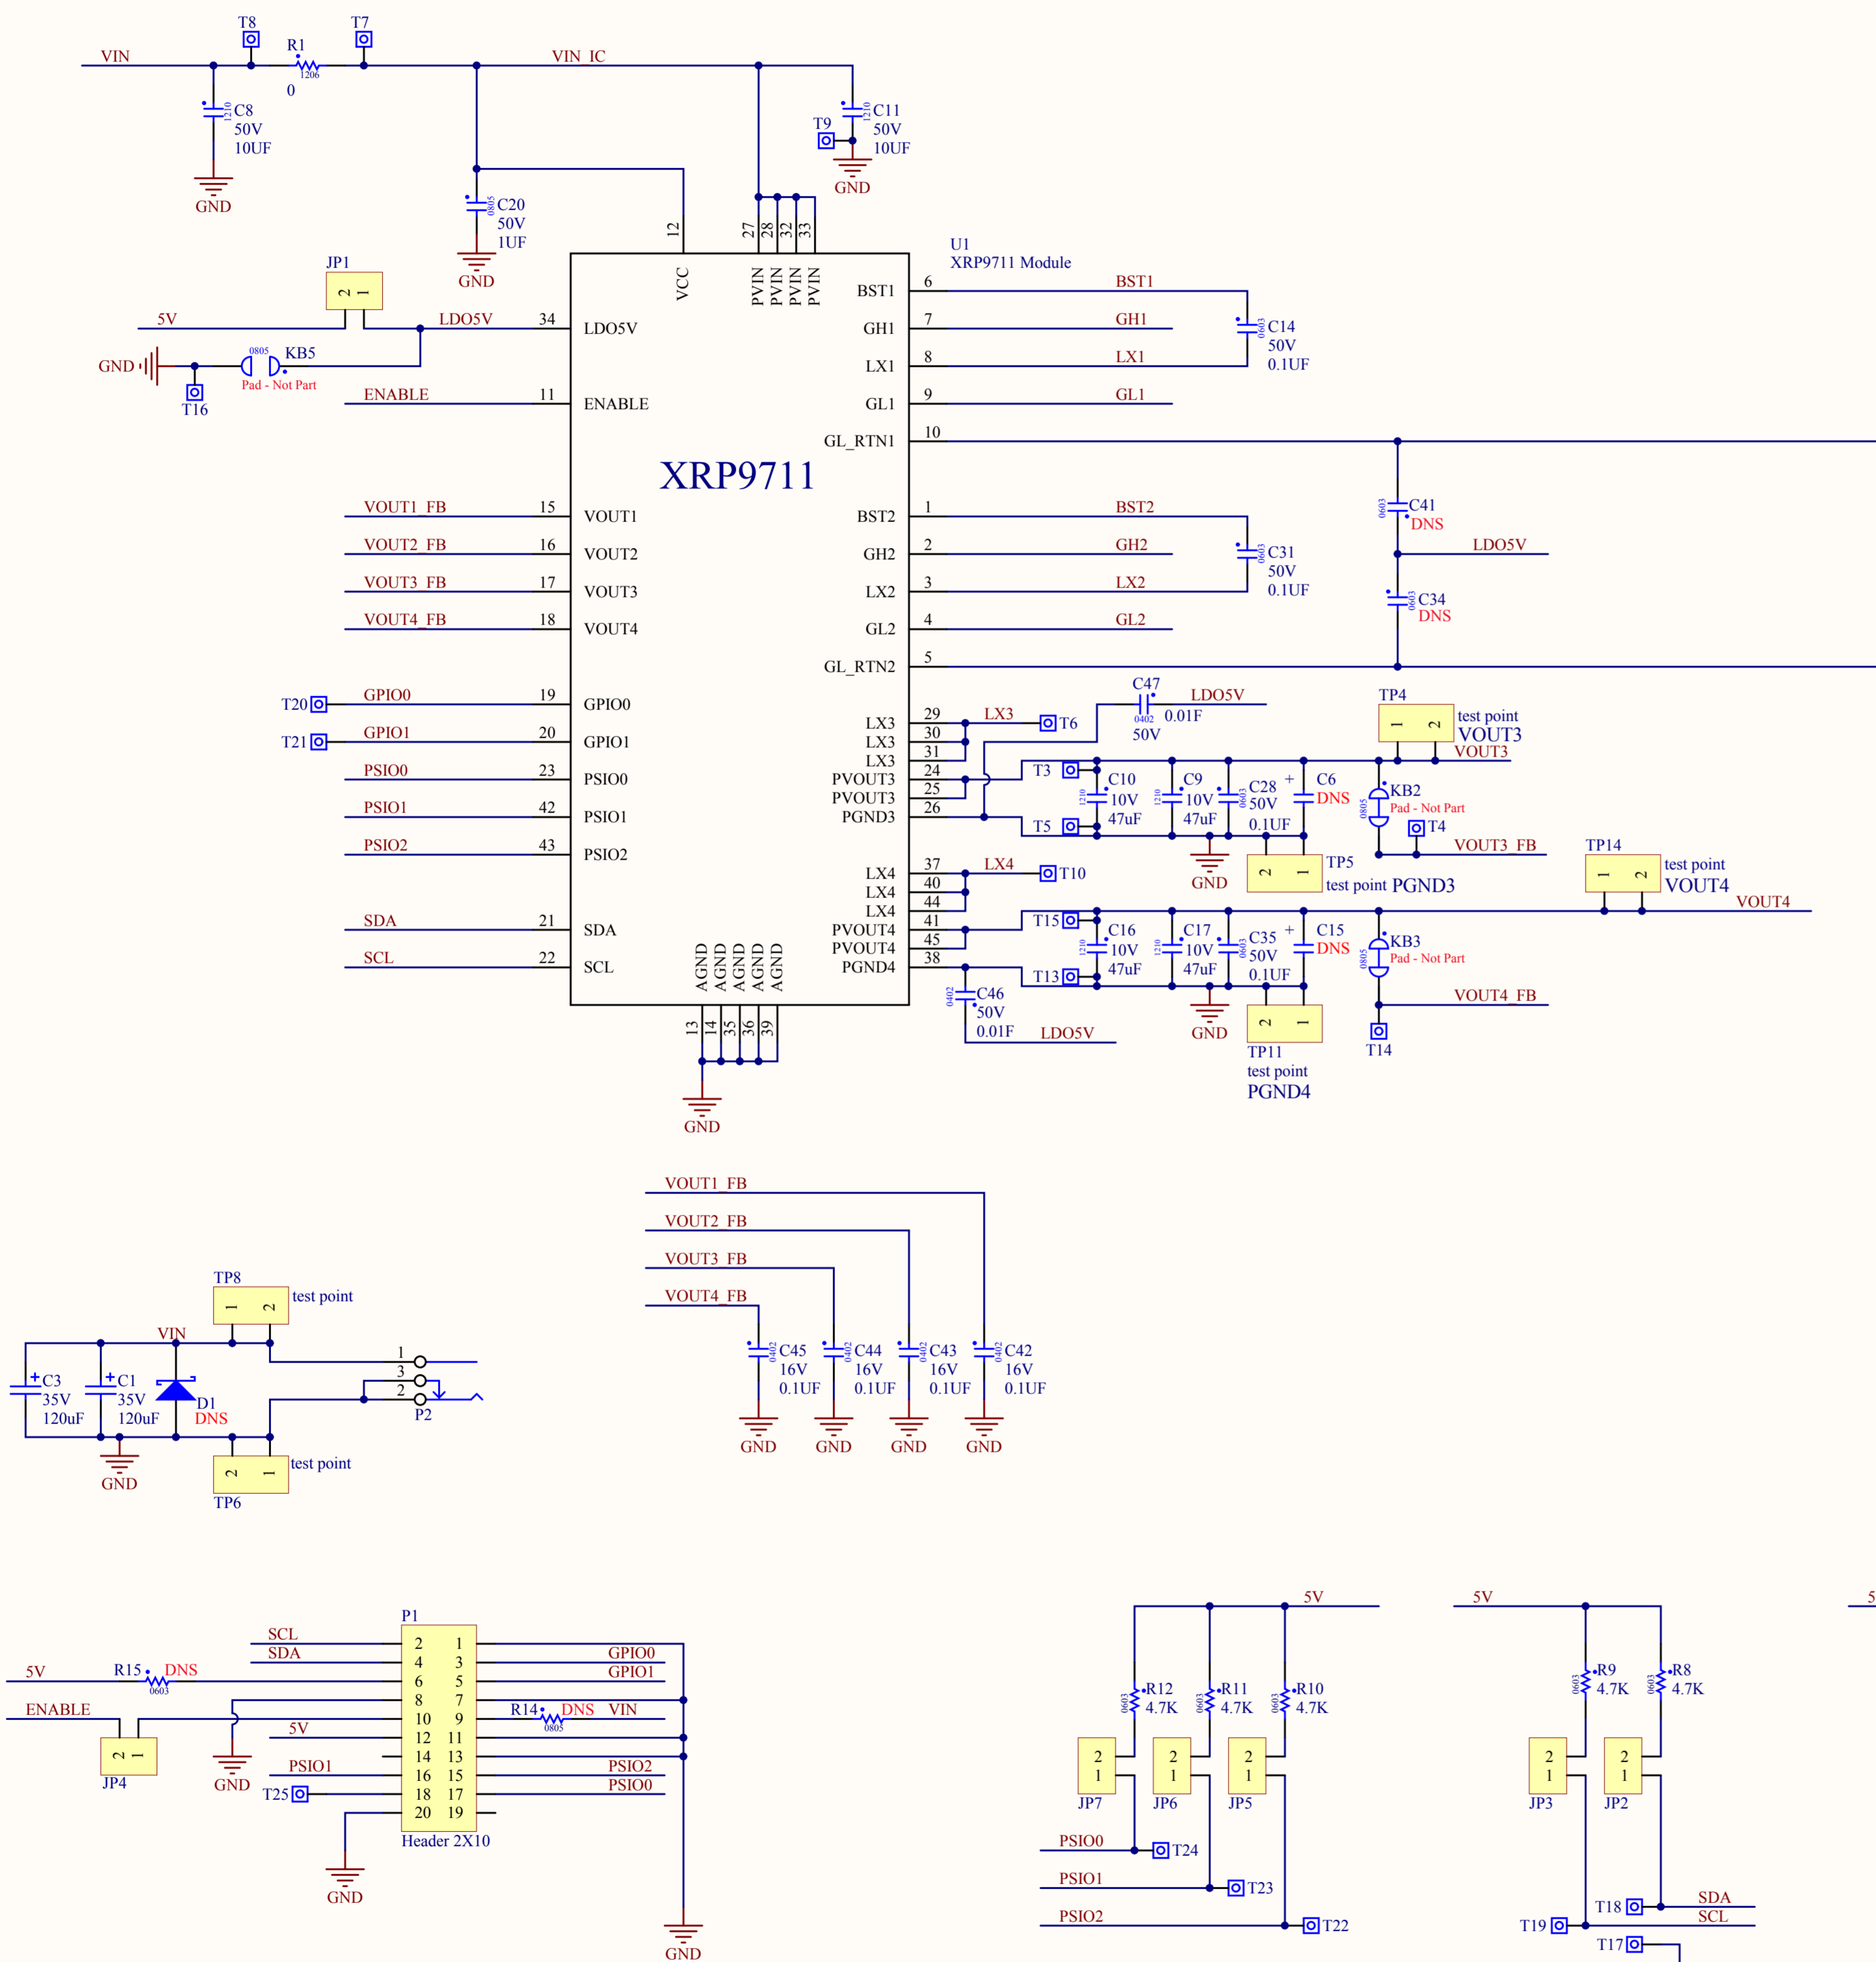

The PSIOs are not pulled up on XRP9711EVB-DEMO-1 by default. There is a loading option to pull PSIOs up to LDO5 if desired. To do this, one will need to short JP1, JP5, JP6 and JP7 headers by means of installing jumpers.

EVALUATION BOARD CONNECTIONS

The following picture illustrates how V_{IN} supplied from a test bench DC power supply and instruments attached to the outputs would be connected to the XRP9711EVB-DEMO-1 board.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
