One-to-Four LVCMOS-to-LVPECL Output Clock and Data Driver

MAX9323

General Description

The MAX9323 low-skew, low-jitter, clock and data driver distributes one of two single-ended LVCMOS inputs to four differential LVPECL outputs. A single logic control signal (CLK_SEL) selects the input signal to distribute to all outputs. The device operates from 3.0V to 3.6V, making the device ideal for 3.3V systems, and consumes only 25mA (max) of supply current.

The MAX9323 features low 150ps part-to-part skew, low 11ps output-to-output skew, and low 1.7ps RMS jitter, making the device ideal for clock and data distribution across a backplane or board. All outputs are enabled and disabled synchronously with the clock input to prevent partial output clock pulses.

The MAX9323 is available in space-saving 20-pin TSSOP and ultra-small 20-pin 4mm x 4mm thin QFN packages and operates over the extended (-40°C to +85°C) temperature range. The MAX9323 is pin compatible with Integrated Circuit Systems' ICS8535-01.

Applications

Precision Clock Distribution
Low-Jitter Data Repeater
Data and Clock Driver and Buffer
Central-Office Backplane Clock Distribution
DSLAM Backplane
Base Station
Hubs

Features

- ◆ 1.7psRMS Added Random Jitter
- ◆ 150ps (max) Part-to-Part Skew
- ◆ 11ps Output-to-Output Skew
- ◆ 450ps Propagation Delay
- ◆ Pin Compatible with ICS8535-01
- ◆ Consumes Only 25mA (max) Supply Current (50% Less than ICS8535-01)
- ◆ Synchronous Output Enable/Disable
- ◆ Two Selectable LVCMOS Inputs
- ◆ 3.0V to 3.6V Supply Voltage Range
- ◆ -40°C to +85°C Operating Temperature Range

Detailed Description

The MAX9323 low-skew, low-jitter, clock and data driver distributes one of two single-ended LVCMOS input signals to four differential LVPECL outputs. An input multiplexer allows selection of one of the two input signals. The output drivers operate at frequencies up to 1.5GHz. The MAX9323 operates from 3.0V to 3.6V, making it ideal for 3.3V systems.

Data Inputs

Single-Ended LVCMOS Inputs

The MAX9323 accepts two single-ended LVCMOS inputs (CLK0 and CLK1, Figure 1). An internal reference (V_{CC}/2) provides the input threshold voltage for CLK0 and CLK1. CLK_SEL selects the CLK0 input or CLK1 input to be converted to four differential LVPECL signals (see Table 1). Connect CLK_SEL to GND to

select CLK0. Connect CLK_SEL to V_{CC} to select CLK1. CLK0 and CLK1 are pulled to GND through internal 51k Ω resistors, when not connected.

CLK_EN Input

CLK_EN enables/disables the differential outputs of the MAX9323. Connect CLK_EN to V_{CC} to enable the differential outputs. The (Q₋, $\overline{Q_-}$) outputs are driven to a differential low condition when CLK_EN = GND. Each differential output pair disables following successive rising and falling edges on CLK₋, after CLK_EN connects to GND. Both a rising and falling edge on CLK₋ are required to complete the enable/disable function (Figure 2).

CLK_SEL Input

CLK_SEL selects which single-ended LVCMOS input signal is output differentially as four LVPECL signals. Connect CLK_SEL to GND to select the CLK0 input.

INPUTS			OUTPUTS	
CLK_EN	CLK_SEL	SELECTED SOURCE	Q0–Q3	$\overline{Q0}–\overline{Q3}$
0	0	CLK0	Disabled, pulled to logic low	Disabled, pulled to logic high
0	1	CLK1	Disabled, pulled to logic low	Disabled, pulled to logic high
1	0	CLK0	Enabled	Enabled
1	1	CLK1	Enabled	Enabled

Connect CLK_SEL to V_{CC} to select the CLK1 input. An internal 51k Ω pulldown resistor to GND allows CLK_SEL to be left floating.

Applications Information

Output Termination

Terminate both outputs of each differential pair through 50 Ω to (V_{CC} - 2V) or use an equivalent Thevenin termination. Use identical termination on each output for the lowest output-to-output skew. Terminate both outputs when deriving a single-ended signal from a differential output. For example, using Q0 as a single-ended output requires termination for both Q0 and $\overline{Q0}$.

Ensure that the output currents do not violate the current limits as specified in the *Absolute Maximum Ratings* table. Observe the device's total thermal limits under all operating conditions.

Power-Supply Bypassing

Bypass V_{CC} to GND using three 0.01 μ F ceramic capacitors and one 0.1 μ F ceramic capacitor. Place the 0.01 μ F capacitors (one per V_{CC} input) as close to V_{CC} as possible (see the *Typical Operating Circuit*). Use multiple bypass vias to minimize parasitic inductance.

Circuit Board Traces

Input and output trace characteristics affect the performance of the MAX9323. Connect each input and output to a 50 Ω characteristic impedance trace to minimize reflections. Avoid discontinuities in differential imped-

ance and maximize common-mode noise immunity by maintaining the distance between differential traces and avoiding sharp corners. Minimize the number of vias to prevent impedance discontinuities. Minimize skew by matching the electrical length of the traces.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);
