**DESCRIPTION**

This unidirectional low voltage Transient Voltage Suppressor (TVS) device for the 1N5907 JEDEC registration has a high Peak Pulse Power rating of 1500 W with extremely fast response times. The 1N5907 is available in a military qualified version as described in the Features section herein. It's most often used for protecting against transients from inductive switching environments, induced RF effects, or induced secondary lightning effects as found in surge levels of IEC61000-4-5 described herein. It's also very successful in protecting airborne avionics and electrical systems when low voltage is required. Since their response time is virtually instantaneous, they can also protect from ESD and EFT per IEC61000-4-2 and IEC61000-4-4.

**IMPORTANT:** For the most current data, consult *MICROSEMI's* website:

\* TVS devices are not typically used for dc power dissipation and are instead operated at or less than their rated standoff voltage ( $V_{WM}$ ) except for transients that briefly drive the device into avalanche breakdown ( $V_{BR}$  to  $V_C$  region).

\* Also available in military qualified types with a JAN, JANTX, or JANTXV prefix per MIL-PRF-19500/500.

**NOTE 1:** A TVS is normally selected according to the reverse “Standoff Voltage”  $V_{WM}$  which should be equal to or greater than the dc or continuous peak operating voltage level.

## SYMBOLS & DEFINITIONS

Symbol	Definition
$V_{WM}$	Standoff Voltage: Applied Reverse Voltage to assure a nonconductive condition. (See Note 1 above)
$V_{(BR)}$	Breakdown Voltage: This is the Breakdown Voltage the device will exhibit at 25°C
$V_C$	Maximum Clamping Voltage: The maximum peak voltage appearing across the TVS when subjected to the peak pulse current in a one millisecond time interval. The peak pulse voltage is the combination of voltage rise due to both the series resistance and thermal rise and positive temperature coefficient ( $\alpha_{V(BR)}$ )
$I_{PP}$	Peak Pulse Current: The peak current during the impulse (See Figure 2)
$P_{PP}$	Peak Pulse Power: The pulse power as determined by the product of $V_C$ and $I_{PP}$
$I_D$	Standby Current: The current at the standoff voltage ( $V_{WM}$ )
$I_{(BR)}$	Breakdown Current: The current used for measuring Breakdown Voltage ( $V_{(BR)}$ )
