Specification

Part No. : **GWLA.05**

Description : GPS L1 & Bluetooth / 2.4GHz Wi-Fi
Embedded 2in1 Ceramic Loop Antenna

Features : 10 * 3.2 * 1.5mm
GPS L1 and Wi-Fi 2.4GHz Applications
Simplifies GPS/2.4GHz Circuits
Two Separate Feeds on one Chip Antenna
Low Profile, Small Footprint Antenna
SMD Surface-mount
RoHS & REACH Compliant

1. Introduction

The Taoglas GWLA.05, GPS L1 /2.4GHz embedded loop antenna is a high efficiency, miniature SMD, edge mounted ceramic antenna for GPS and 2.4GHz Wi-Fi, WLAN, Zigbee, Bluetooth, and 802.11 applications. Customers can use this antenna for GPS and 2.4GHz (Wi-Fi or Bluetooth) modules, rather than using two separate antennas. The GWLA.05 has two separate antenna feeds, making it the ideal choice for applications where there is limited PCB space. The GWLA.05 uses the main PCB as its ground plane, thereby maintaining good efficiency despite its small size. It can be tuned for different PCB sizes/environments by simply changing the values of the matching circuit. It is ideally mounted on the center edge of a ground-plane.

At 10*3.2*1.5mm, the GWLA.05 is one of the smallest combination embedded antennas available worldwide. This antenna is delivered on tape and reel.

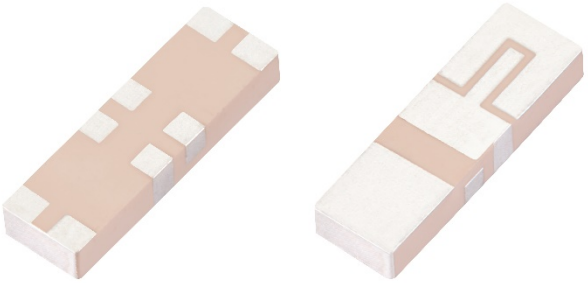
Typical Applications – where both GPS and 2.4GHz are required:

- Navigation or Position Tracking Systems
- Tablet PCs
- Gateways and Routers
- UAV Communication Systems
- Handheld Devices
- OBD Devices
- Mobile Cameras

Many module manufacturers specify peak gain limits for any antennas that are to be connected to that module. Those peak gain limits are based on free-space conditions. In practice, the peak gain of an antenna tested in free-space can degrade by at least 1 or 2 dBi when put inside a device. So ideally you should go for a slightly higher peak gain antenna than mentioned on the module specification to compensate for this effect, giving you better performance.

Upon testing of any of our antennas with your device and a selection of appropriate layout, integration technique, or cable, Taoglas can make sure any of our antennas' peak gain will be below the peak gain limits. Taoglas can then issue a specification and/or report for the selected antenna in your device that will clearly show it complying with the peak gain limits, so you can be assured you are meeting regulatory requirements for that module.

For example, a module manufacturer may state that the antenna must have less than 2 dBi peak gain, but you don't need to select an embedded antenna that has a peak gain of less than 2 dBi in free-space. This will give you a less optimized solution. It is better to go for a slightly higher free-space peak gain of 3 dBi or more if available. Once that antenna gets integrated into your device, performance will degrade below this 2 dBi peak gain due to the effects of GND plane, surrounding components, and device housing. If you want to be absolutely sure, contact Taoglas and we will test. Choosing a Taoglas antenna with a higher peak gain than what is specified by the module manufacturer and enlisting our help will ensure you are getting the best performance possible without exceeding the peak gain limits.



2. Specification

ELECTRICAL				
Application Bands	GPS L1		Wi-Fi /Bluetooth	
Frequency (MHz)	1575.42		2400-2500	
Bandwidth (MHz)	20 (RL<-10dB)		100 (RL<-5dB)	
Ground plane size (mm)	80 x 40	30 x 15	80 x 40	30 x 15
Peak Gain (dBi)	0.28	-2.17	-0.82	0.24
Efficiency (%)	45.37	27	44.16	52
Return Loss (dB)	< -10		< -5	
Isolation (dB)	< -20		< -6	
Impedance (Ω)	50			
Polarization	Linear			
Input Power	10W			
MECHANICAL				
Dimensions (mm)	10 x 3.2 x 1.5			
Ground plane (mm)	80 x 40 or 30 x 15			
Weight (g)	0.19			
ENVIRONMENTAL				
Operating Temperature	-40°C to 85°C			
Storage Temperature	-25°C to 85°C			
Relative Humidity	20% to 70%

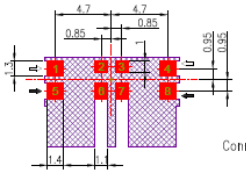
Foot Print

Top Copper

Pads 1, 4, 5 and 8 are the same size,
Pads 2 and 3 are the same size, Pads 6 and 7 are the same size.
Pad 5 and 8 should be connected to a 50 ohm transmission line.

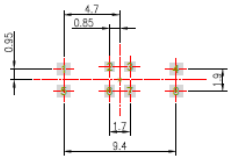


: Connected to GND

: Connected to 50 ohm transmission line.

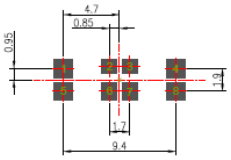
Top Solder Paste

Pads 1, 4, 5 and 8 are the same size,
Pads 2 and 3 are the same size, Pads 6 and 7 are the same size.

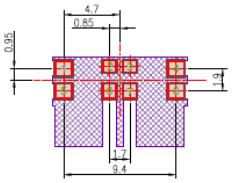


Top Solder Mask

This drawing is a negative of solder mask. Black regions are anti-mask.



Composite Diagram



NOTE:
1. Tin Plated area
2. Solder Mask area
3. Copper area
4. Paste area
5. Keepout Region
6. Ground keepout should extend through any inner PCB layers and any side around the antenna to minimize coupling from RF feed to ground, except the side facing system ground.
7. Any vias in pads should be either filled or tented to prevent solder from wicking away from the pad during reflow.
8. The dimension tolerances should follow standard PCB manufacturing guidelines

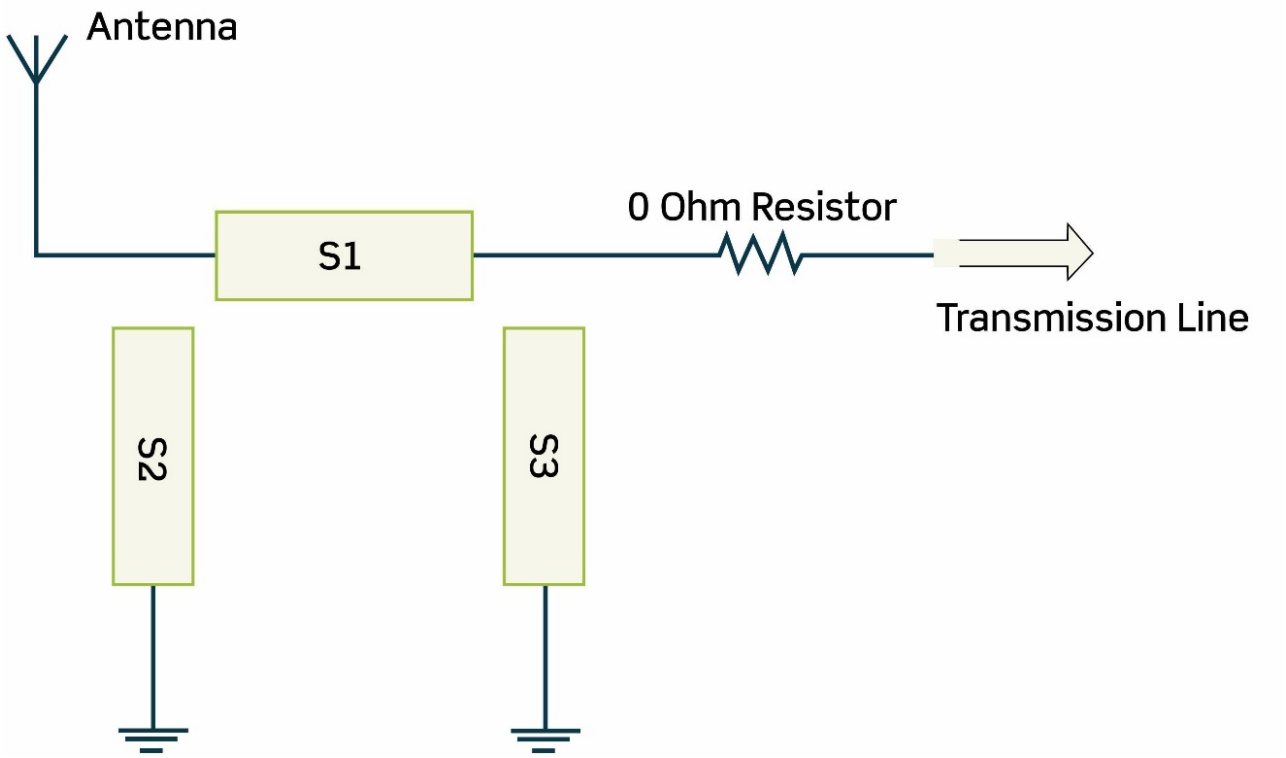
TITLE. : GPS/Galileo & 2.4GHz Multi-Band Ceramic Chip Antenna/10*3*1.5(mm)

PART NO. : GWLA.05

* Footprint drawings in .dwg format will be provided upon request.

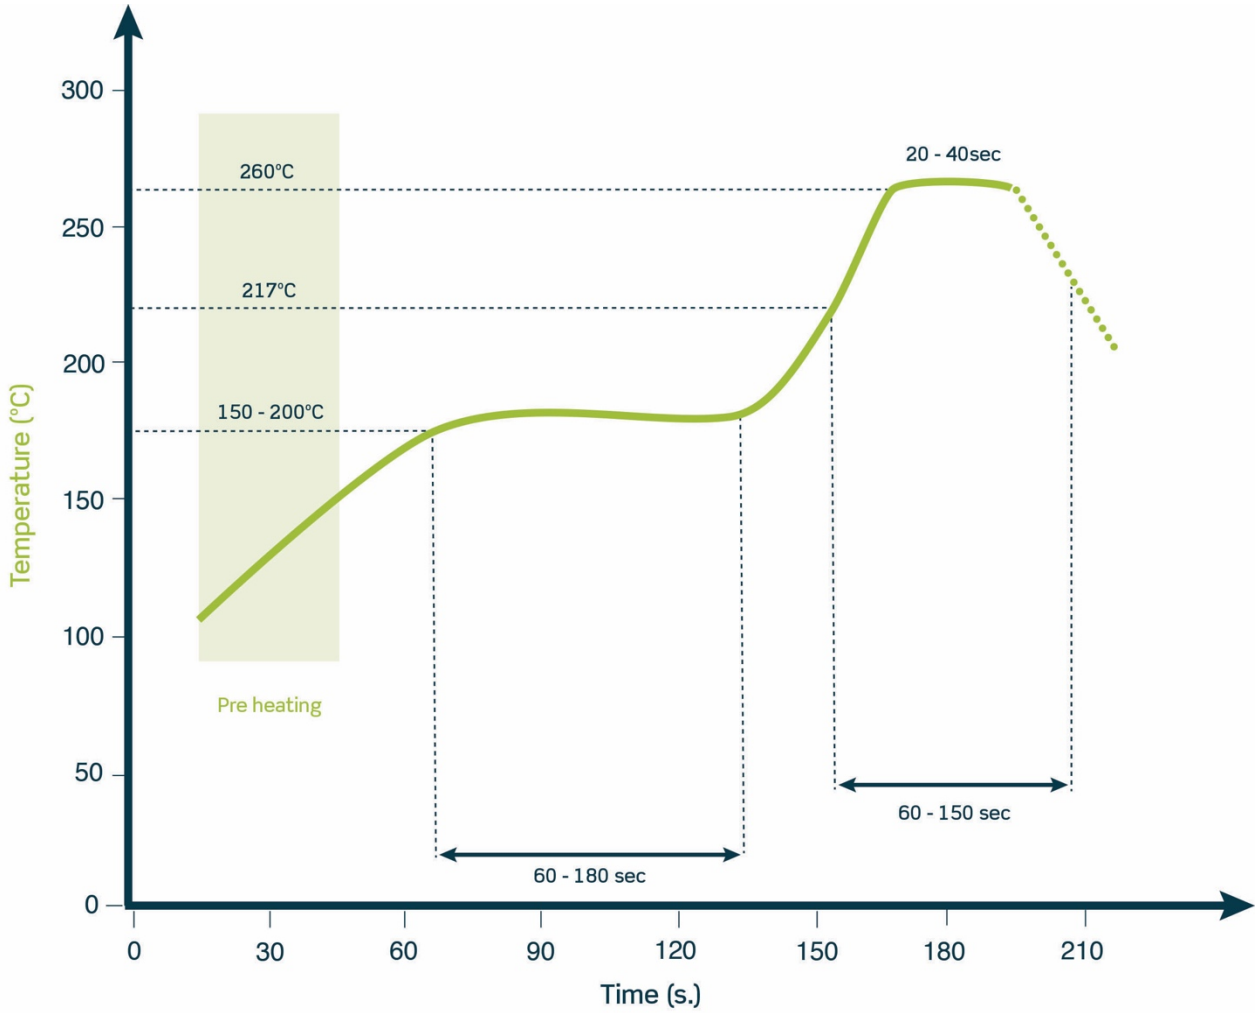
6.2 Matching Circuit

Like all antennas, surrounding components, enclosures, and changes to the GND plane dimensions can alter performance. A pi-matching network like the one shown below is required in case adjustments need to be made. The antenna EVB has a similar matching network. The components on the EVB are a good starting point for a new design, but will need to be adjusted upon integration for best performance. The zero ohm resistor is needed for the ability to solder down a coax pigtail to make measurements with a vector network analyzer.



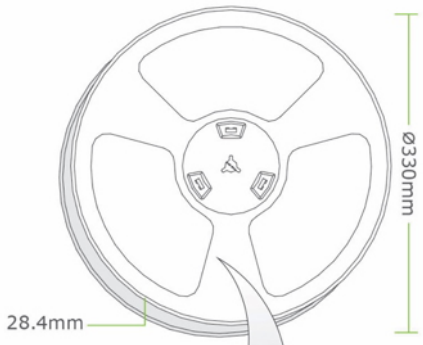
7. Solder Reflow Profile

Typical Soldering Profile for Lead-free Process:

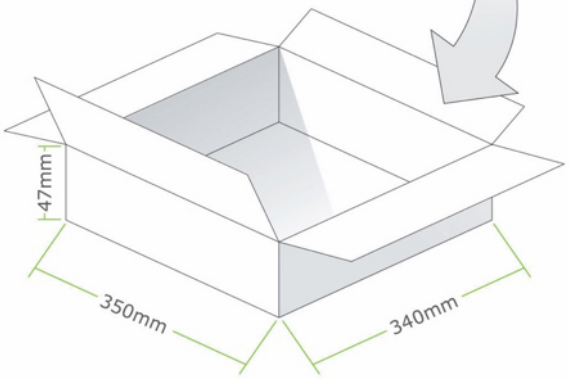


8. Packaging

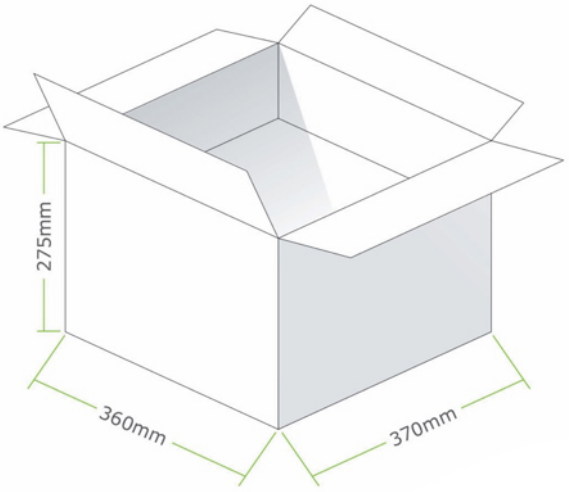
1000pcs GWLA.05 per Tape & Reel
Dimensions - ⌀330*28.4mm
Weight - 0.6Kg



1000pcs GWLA.05 per carton
Dimensions - 350*340*47mm
Weight - 0.9Kg



5000pcs GWLA.05 per carton
Dimensions - 360*370*275mm
Weight - 5.0Kg



OCEAN CHIPS
Океан Электроники
Поставка электронных компонентов

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «**JONHON**», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «**FORSTAR**».

AVIC JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
