

# ITS41k0S-ME-N

Smart High-Side NMOS-Power Switch

## Data Sheet

Rev 1.0, 2012-09-01

Standard Power

## 1 Overview

### Features

- Current controlled input
- Capable of driving all kind of loads (inductive, capacitive and resistive)
- Negative voltage clamped at output with inductive loads
- Current limitation
- Very low standby current
- Thermal shutdown with restart
- Overload protection
- Short circuit protection
- Overvoltage protection (including load dump)
- Reverse battery protection
- Loss of GND and loss of V<sub>bb</sub> protection
- ESD-Protection
- Improved electromagnetic compatibility (EMC)
- Green Product (RoHS compliant)

ITS41k0S-ME-N is not qualified and manufactured according to the requirements of Infineon Technologies with regards to automotive and/or transportation applications.

### Description

The ITS41k0S-ME-N is a protected 1  $\Omega$  single channel Smart High-Side NMOS-Power Switch in a PG-SOT223-4 package with charge pump and current controlled input, monolithically integrated in a smart power technology.

### Product Summary

Overvoltage protection  $V_{SAZ\ min} = 62V$   
 Operating voltage range  $4,9V < V_S < 60V$   
 On-state resistance  $R_{DS(on)}\ typ\ 800\ m\Omega$   
 Operating Temperature range  $T_j = -40^{\circ}C\ to\ 125^{\circ}C$

### Application

- All types of resistive, inductive and capacitive loads
- Current controlled power switch for 12V, 24V and 45V DC in industrial applications
- Driver for electromagnetic relays
- Signal amplifier

### 3.2 Pin Definitions and Functions

| Pin | Symbol | Function                                                       |
|-----|--------|----------------------------------------------------------------|
| 1   | IN     | Input, activates the power switch in case of connection to GND |
| 2   | VS     | Supply voltage                                                 |
| 3   | OUT    | Output to the load                                             |
| 4   | VS     | Supply voltage                                                 |

## 4 General Product Characteristics

### 4.1 Absolute Maximum Ratings

**Table 1** Absolute maximum ratings <sup>1)</sup>T<sub>j</sub> = 25°C all voltages with respect to ground.  
Currents flowing into the device unless otherwise specified in chapter "Block Diagram and Terms"

| Parameter                                                                 | Symbol    | Values       |      |      | Unit              | Note /<br>Test Co<br>ndition |
|---------------------------------------------------------------------------|-----------|--------------|------|------|-------------------|------------------------------|
|                                                                           |           | Min.         | Typ. | Max. |                   |                              |
| Supply voltage VS                                                         |           |              |      |      |                   |                              |
| Voltage                                                                   | $V_S$     |              | 60   | V    |                   | 4.1.1                        |
| Output stage OUT                                                          |           |              |      |      |                   |                              |
| Output Current; (Short circuit current see<br>electrical characteristics) | $I_{OUT}$ | self limited |      |      | A                 | 4.1.2                        |
| Input IN                                                                  |           |              |      |      |                   |                              |
| Input Current                                                             | $I_{IN}$  | -15          | 15   | mA   |                   | 4.1.3                        |
| Temperatures                                                              |           |              |      |      |                   |                              |
| Junction Temperature                                                      | $T_j$     | -40          | 125  | °C   |                   | 4.1.4                        |
| Storage Temperature                                                       | $T_{stg}$ | -55          | 125  | °C   |                   | 4.1.5                        |
| Power dissipation                                                         |           |              |      |      |                   |                              |
| Ta = 25 °C <sup>2)</sup>                                                  | $P_{tot}$ |              | 1.7  | W    |                   | 4.1.6                        |
| Inductive load switch-off energy dissipation                              |           |              |      |      |                   |                              |

| ESD Susceptibility                                                        |           |              |      |      |                   |                              |
| ESD susceptibility (input pin)                                            | $V_{ESD}$ | -1           | 1    | kV   | HBM <sup>3)</sup> | 4.1.8                        |
| ESD susceptibility (all other pins)                                       | $V_{ESD}$ | -5           | 5    | kV   | HBM <sup>3)</sup> | 4.1.9                        |

1) Not subject to production test, specified by design

2) Device on 50mm\*50mm\*1.5mm epoxy PCB FR4 with 6 cm<sup>2</sup> (one layer, 70mm thick) copper area for V<sub>bb</sub> connection. PCB is vertical without blown air

3) ESD susceptibility HBM according to EIA/JESD 22-A 114.

*Note: Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*

*Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" the normal operating range. Protection functions are not designed for continuous or repetitive operation.*

## 4.2 Functional Range

**Table 2 Functional Range**

| Parameter                 | Symbol | Values |      |      | Unit | Note / Test Condition | Number |
|---------------------------|--------|--------|------|------|------|-----------------------|--------|
|                           |        | Min.   | Typ. | Max. |      |                       |        |
| Nominal Operating Voltage | $V_S$  | 4.9    | –    | 60   | V    | $V_S$ increasing      | 4.2.1  |

*Note: Within the functional range the IC operates as described in the circuit description. The electrical characteristics are specified within the conditions given in the related electrical characteristics table.*

## 4.3 Thermal Resistance

This thermal data was generated in accordance with JEDEC JESD51 standards.

More information on [www.jedec.org](http://www.jedec.org).

**Table 3 Thermal Resistance<sup>1)</sup>**

| Parameter                     | Symbol                  | Values |       |      | Unit | Note /<br>Test Condition | Number |

|                               |                         | Min.   | Typ.  | Max. |      |                          |        |
| PG-SOT223-4                   |                         |        |       |      |      |                          |        |
| Junction to Case, Exposed pad | $R_{thjc}$              | —      | 40.5  | —    | K/W  |                          | 4.3.1  |
| Junction to ambient           | $R_{thJA\_1s0p}$        | —      | 145.4 | —    | K/W  | 2)                       | 4.3.2  |
| Junction to ambient           | $R_{thJA\_1s0p\_300mm}$ | —      | 77.2  | —    | K/W  | 3)                       | 4.3.3  |
| Junction to ambient           | $R_{thJA\_1s0p\_600mm}$ | —      | 66.2  | —    | K/W  | 4)                       | 4.3.4  |
| Junction to ambient           | $R_{thJA\_2s2p}$        | —      | 57.8  | —    | K/W  | 5)                       | 4.3.5  |
| Junction to ambient           | $R_{thJA\_2s2pvia}$     | —      | 52.9  | —    | K/W  | 6)                       | 4.3.6  |

1) Not subject to production test, specified by design

2) Specified  $R_{thJA}$  value is according to Jedec JESD51-3 at natural convection on FR4 1s0p board, footprint; the Product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 1x 70µm Cu.

3) Specified  $R_{thJA}$  value is according to Jedec JESD51-3 at natural convection on FR4 1s0p board, Cu, 300mm<sup>2</sup>; the Product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 1x 70µm Cu.

4) Specified  $R_{thJA}$  value is according to Jedec JESD51-3 at natural convection on FR4 1s0p board, 600mm<sup>2</sup>; the Product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 1x 70µm Cu.

5) Specified  $R_{thJA}$  value is according to Jedec JESD51-2,-5,-7 at natural convection on FR4 2s2p board; the Product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 2 inner copper layers (2 x 70µm Cu, 2 x 35µm Cu).

6) Specified  $R_{thJA}$  value is according to Jedec JESD51-2,-5,-7 at natural convection on FR4 2s2p board with two thermal vias; the Product (Chip+Package) was simulated on a 76.2 x 114.3 x 1.5 mm board with 2 inner copper layers (2 x 70µm Cu, 2 x 35µm Cu). The diameter of the two vias are equal 0.3mm and have a plating of 25µm with a copper heatsink area of 3mm x 2mm). JEDEC51-7: The two plated-through hole vias should have a solder land of no less than 1.25 mm diameter with a drill hole of no less than 0.85 mm diameter.

## 5 Electrical Characteristics

**Table 4**  $V_S = 9V$  to  $60V$ ;  $T_j = -40^\circ C$  to  $125^\circ C$ ; all voltages with respect to ground. Currents flowing into the device unless otherwise specified in chapter "Block Diagram and Terms". Typical values at  $V_S = 13.5V$ ,  $T_j = 25^\circ C$

| Parameter                                                                                                               | Symbol              | Values |      |                   | Unit              | Note /<br>Test Condition                                                                         | Number |

- Nominal Load Current is limited by the current limitation; see protection function data
- Device on 50mm x 50mm x 1,5mm epoxy FR4 PCB with 6cm<sup>2</sup> (one layer copper 70um thick) copper area for supply voltage connection. PCB in vertical position without blown air
- Timing values only with high input slewrates ( $t_{rIN} = t_{fIN} \leq 50ns$ ); otherwise slower
- Not tested in production
- Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" normal operating range. Protection functions are not designed for continuous repetitive operation.
- Driver circuit must be able to sink currents > 1mA

## 6 Application Information

### 6.1 Application Diagram

The following information is given as a hint for the implementation of the device only and shall not be regarded as a description or warranty for a certain functionality, condition or quality of the device.

**Figure 4 Application Diagram**

The **ITS41k0S-ME-N** can be connected directly to a supply network. It is recommended to place a ceramic capacitor (e.g.  $C_S = 220\text{nF}$ ) between supply and GND to avoid line disturbances. Wire harness inductors/resistors are sketched in the application circuit above.

The complex load (resistive, capacitive or inductive) must be connected to the output pin OUT.

A built-in current limit protects the device against destruction.

The **ITS41k0S-ME-N** can be switched on and off with a low power levelshifter switch e.g. Infineon BCR1xx.

The IN pin must be pulled down to GND potential to switch the **ITS41k0S-ME-N** on. If no current is pulled down, the IN-node will float up to  $V_S$  potential by an internal pull up. In this mode the **ITS41k0S-ME-N** is deactivated with very low current consumption.

The output voltage slope is controlled during on and off transition to minimize emissions. Only a small CerCap  $C_{OUT} = 1\text{nF}$  is recommended to attenuate RF noise.

In the following chapters the main features, some typical waveforms and the protection behaviour of the **ITS41k0S-ME-N** is shown. For further details please refer to application notes on the Infineon homepage.

## 6.2 Special features

### 6.3 Typical Application Waveforms

Figure 6 Typical application waveforms

## 6.4 Protection behavior

## 7 Typical Performance Graphs

### Typical Performance Characteristics

Transient Thermal Impedance  $Z_{thJA}$  versus Pulse Time  $t_p$  @ 6cm<sup>2</sup> heatsink area ( $D = t_p/T$ )

Transient Thermal Impedance  $Z_{thJA}$  versus Pulse Time  $t_p$  @ min. footprint ( $D = t_p/T$ )

On-Resistance  $R_{DS(on)}$  versus Junction Temperature  $T_j$  @  $V_s = 9V$ ;  $I_L = 150mA$

On-Resistance  $R_{DS(on)}$  versus Supply Voltage  $V_s = V_{bb}$  @  $I_L = 150mA$   $T_j = par.$

# Typical Performance Graphs

## Typical Performance Characteristics

Switch ON Time  $t_{ON}$  versus  
Junction Temperature  $T_J$  @  $R_L = 270 \Omega$ ;  $V_S = \text{par.}$

Switch OFF Time  $t_{OFF}$  versus  
Junction Temperature  $T_J$  @  $R_L = 270 \Omega$ ;  $V_S = \text{par.}$

ON Slewrate  $SR_{ON}$  versus  
Junction Temperature  $T_J$  @  $R_L = 270 \Omega$ ;  $V_S = \text{par.}$

OFF Slewrate  $SR_{OFF}$  versus  
Junction Temperature  $T_J$  @  $R_L = 270 \Omega$ ;  $V_S = \text{par.}$

# Typical Performance Graphs

## Typical Performance Characteristics

Initial Peak Short Circuit Current Limit  $I_{LSCP}$  versus Junction Temperature  $T_J$  @  $V_S=13.5V$ ;  $t_m=100\mu s$

Initial Short Circuit Shutdown Time  $t_{OFF SC}$  versus Junction Start-Temperature  $T_{JSTART}$ ;  $V_S=parameter$

Initial Peak Short Circuit Current Limit  $I_{LSCP}$  versus Supply Voltage  $V_S = V_{bb}$  @  $T_J=par.=100\mu s$ .

Current Limitation Characteristic  $I_{LSC}$  versus Drain Source Voltage Drop  $V_{DS}$  @  $V_S=13.5 V$

## Typical Performance Characteristics

Stand By Current Consumption  $I_{\text{SOFF}}$  versus  
Junction Temperature  $T_J$  @ pin IN open

## 8 Package Outlines and Footprint

**Figure 8 PG-SOT223-4** (Plastic Dual Small Outline Package, RoHS-Compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020)

With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation, warranties of non-infringement of intellectual property rights of any third party.

#### **Information**

For further information on technology, delivery terms and conditions and prices, please contact the nearest Infineon Technologies Office ([www.infineon.com](http://www.infineon.com)).

#### **Warnings**

Due to technical requirements, components may contain dangerous substances. For information on the types in question, please contact the nearest Infineon Technologies Office.

The Infineon Technologies component described in this Data Sheet may be used in life-support devices or systems and/or automotive, aviation and aerospace applications or systems only with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support automotive, aviation and aerospace device or system or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
