

# MAX14937

## Two Channel, 5kV<sub>RMS</sub> I<sup>2</sup>C Isolator

### General Description

The MAX14937 is a two-channel, 5kV<sub>RMS</sub> I<sup>2</sup>C digital isolator utilizing Maxim's proprietary process technology. For applications requiring 2.75kV<sub>RMS</sub> of isolation, see the MAX14933 data sheet. The device transfers digital signals between circuits with different power domains at ambient temperatures up to +125°C.

The device offers two bidirectional, open-drain channels for applications, such as I<sup>2</sup>C, that require data to be transmitted in both directions on the same line.

The device features independent 2.25V to 5.5V supplies on each side of the isolator. The MAX14937 operates from DC to 1.7MHz and can be used in isolated I<sup>2</sup>C busses with clock stretching.

The MAX14937 is available in a 16-pin, wide-body (10.3mm x 7.5mm) SOIC package, and is rated for operation at ambient temperatures of -40°C to +125°C.

### Applications

- I<sup>2</sup>C, SMBus, PMBus™ Interfaces
- Power Supplies
- Battery Management
- Instrumentation

### Benefits and Features

- Robust Galvanic Isolation of Digital Signals
  - Withstands 5kV<sub>RMS</sub> for 60s (V<sub>ISO</sub>)
  - Continuously Withstands 848V<sub>RMS</sub> (V<sub>IOWM</sub>)
  - 1200V<sub>PEAK</sub> Repetitive Peak Voltage (V<sub>IORM</sub>)
  - Withstands ±10kV Surge per IEC 61000-4-5
- Interfaces Directly with Most Micros and FPGAs
  - Accepts 2.25V to 5.5V Supplies
  - Bidirectional Data Transfer from DC to 1.7MHz
- Low Power Consumption
  - 5.3mA per Channel Typical at 1.7MHz

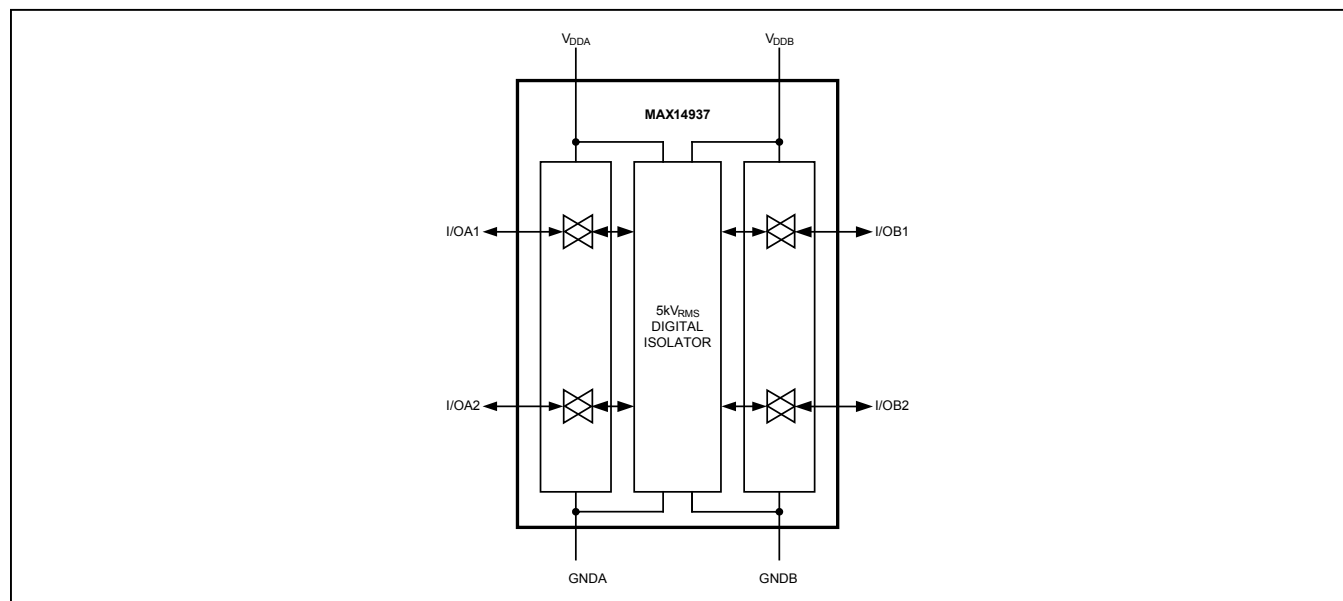

### Safety Regulatory Approvals

(See [Safety Regulatory Approvals](#))

- UL According to UL1577
- cUL According to CSA Bulletin 5A
- VDE 0884-10

Ordering Information appears at end of data sheet.

## Absolute Maximum Ratings

V <sub>DDA</sub> to G <sub>NDA</sub> .....	-0.3V to +6V
V <sub>DDB</sub> to G <sub>NDB</sub> .....	-0.3V to +6V
I/OA <sub>-</sub> to G <sub>NDA</sub> .....	-0.3V to +6V
I/OB <sub>-</sub> to G <sub>NDB</sub> .....	-0.3V to +6V
Short-Circuit Duration (I/OA <sub>-</sub> to G <sub>NDA</sub> , I/OB <sub>-</sub> to G <sub>NDB</sub> ) .....	Continuous

Continuous Power Dissipation (T <sub>A</sub> = +70°C) Wide SO (derate 14.1mW/°C above +70°C) .....	1126.8mW
Operating Temperature Range .....	-40°C to +125°C
Maximum Junction Temperature .....	+150°C
Storage Temperature Range .....	-65°C to +150°C
Lead Temperature (soldering, 10s) .....	+300°C
Soldering Temperature (reflow) .....	+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Package Thermal Characteristics (Note 1)

Wide SOIC

Junction-to-Ambient Thermal Resistance (θ <sub>JA</sub> ).....	71°C/W
Junction-to-Case Thermal Resistance (θ <sub>JC</sub> ) .....	23°C/W

**Note 1:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maximintegrated.com/thermal-tutorial](http://www.maximintegrated.com/thermal-tutorial).

## DC Electrical Characteristics

V<sub>DDA</sub> - V<sub>GND A</sub> = +2.25V to +5.5V, V<sub>DD B</sub> - V<sub>GND B</sub> = +2.25V to +5.5V, T<sub>A</sub> = -40°C to +125°C, unless otherwise noted. Typical values are at V<sub>DDA</sub> - V<sub>GND A</sub> = +3.3V, V<sub>DD B</sub> - V<sub>GND B</sub> = +3.3V, V<sub>GND A</sub> = V<sub>GND B</sub>, T<sub>A</sub> = +25°C, unless otherwise noted. (Note 2 and Note 3)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS

### ESD Protection

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
ESD		Human body model, all pins		±4		kV

**Note 2:** All devices are 100% production tested at  $T_A = +125^{\circ}C$ . Specifications over temperature are guaranteed by design.

**Note 3:** All currents into the device are positive; all currents out of the device are negative. All voltages are referenced to ground on the corresponding side of the device, unless otherwise noted.

**Note 4:** This is the minimum difference between the output logic-low level and the input logic threshold. This ensures that there is no possibility of the part latching up the bus to which it is connected.

**Note 5:** Not production tested. Guaranteed by design.

**Note 6:** CMTI is the maximum sustainable common-mode voltage slew rate while maintaining operation. CMTI applies to both rising and falling common-mode voltage edges. Tested with the transient generator connected between GNDA and GNDB ( $V_{CM} = 1000V$ ).

## Safety Regulatory Approvals

<b>UL</b>
The MAX14937 is certified under UL1577. For more details, refer to file E351759.
Rated up to 5000V <sub>RMS</sub> isolation voltage for single protection.
<b>cUL (Equivalent to CSA notice 5A)</b>
The MAX14934/MAX14936 are certified up to 5000V <sub>RMS</sub> for single protection. For more details, refer to file 351759.
<b>VDE</b>
VDE 0884-10 Pending

## IEC Insulation Testing

<b>TUV</b>
The MAX14934/MAX14936 are tested under TUV.
IEC60950-1: Up to 1200VP (848V <sub>RMS</sub> ) working voltage for basic insulation.
IEC61010-1 (ed. 3): Up to 848V <sub>RMS</sub> working voltage for basic insulation. For details, see Technical Report number 095-72100581-100.
IEC60601-1 (ed. 3): For details see Technical Report number 095-72100581-200.
Basic insulation 1 MOOP, 1200V <sub>PK</sub> (848V <sub>RMS</sub> )
Withstand isolation voltage for 60s (Viso) 5000V <sub>RMS</sub>

## Typical Operating Characteristics

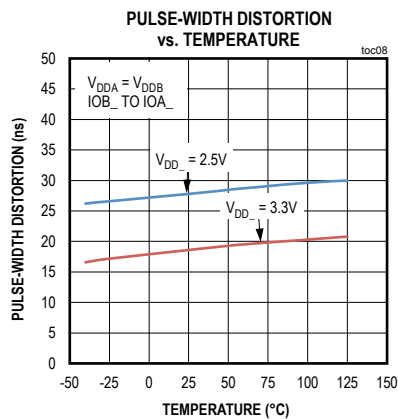

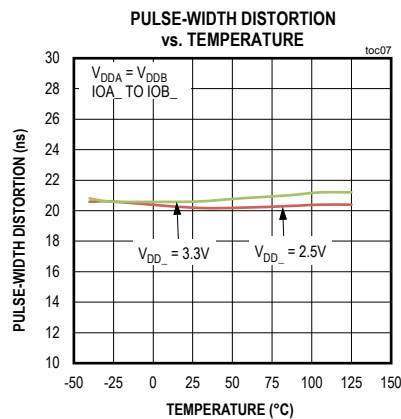

$V_{DDA} - V_{GNDA} = +3.3V$ ,  $V_{DDB} - V_{GNDB} = +3.3V$ ,  $V_{GNDA} = V_{GNDB}$ ,  $T_A = +25^\circ C$ , unless otherwise noted.

## Typical Operating Characteristics (continued)

$V_{DDA} - V_{GNDA} = +3.3V$ ,  $V_{DDB} - V_{GNDB} = +3.3V$ ,  $V_{GNDA} = V_{GNDB}$ ,  $T_A = +25^\circ C$ , unless otherwise noted.

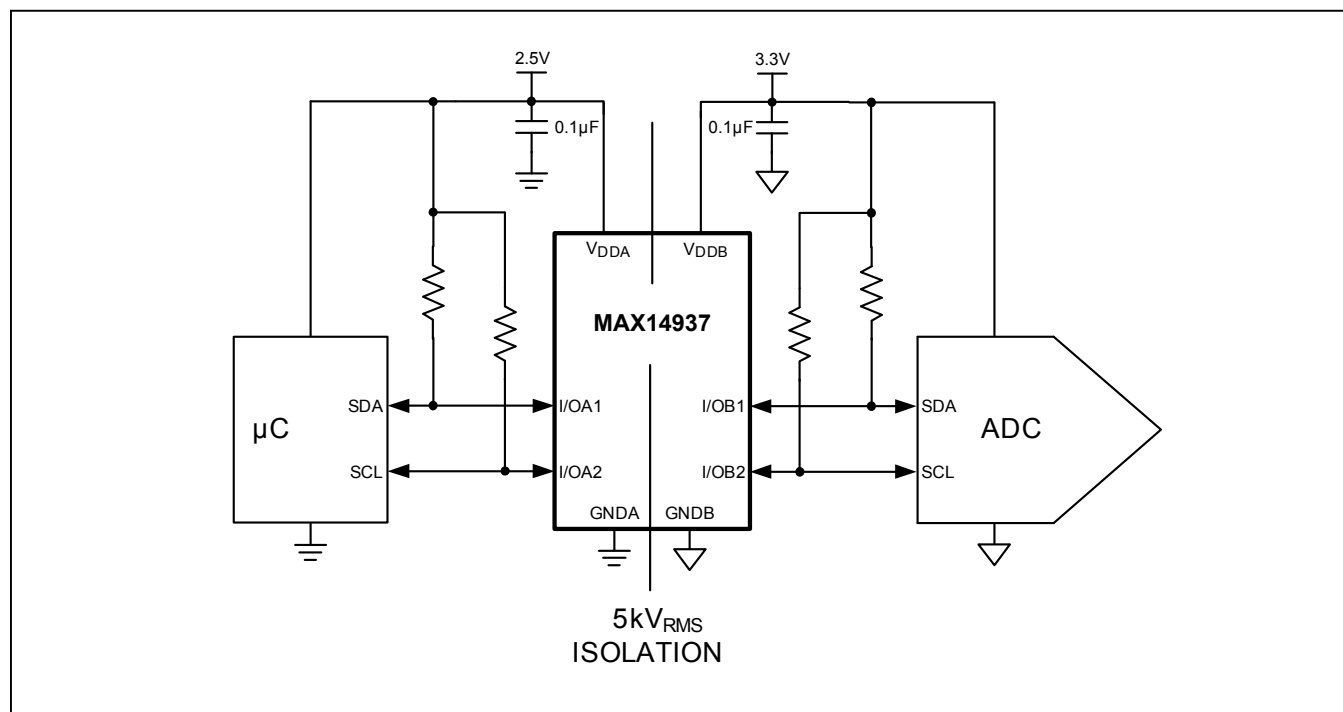

Pin Configuration

Pin Description

PIN	NAME	FUNCTION	VOLTAGE RELATIVE TO
1, 7	GNDA	Ground Reference For Side A. Ensure both pins 1 and 7 are connected to GNDA.	—
2, 8	I.C.	Internally Connected. Connect to GNDA or leave unconnected.	GNDA
3	V <sub>DDA</sub>	Power Supply. Bypass V <sub>DDA</sub> with a 0.1μF ceramic capacitor as close as possible to the pin.	GNDA
4, 13	N.C.	No Connection. Not internally connected.	—
5	I/OA1	Bidirectional Input/Output 1 On Side A. I/OA1 is translated to/from I/OB1 and is an open-drain output.	GNDA
6	I/OA2	Bidirectional Input/Output 2 On Side A. I/OA2 is translated to/from I/OB2 and is an open-drain output.	GNDA
9, 16	GNDB	Ground Reference For Side B.	—
10, 15	I.C.	Internally Connected. Connect to GNDB or leave unconnected.	GNDB
11	I/OB2	Bidirectional Input/Output 2 On Side B. I/OB2 is translated to/from I/OA2 and is an open-drain output.	GNDB
12	I/OB1	Bidirectional Input/Output 1 On Side B. I/OB1 is translated to/from I/OA1 and is an open-drain output.	GNDB
14	V <sub>DDB</sub>	Power Supply. Bypass V <sub>DDB</sub> with a 0.1μF ceramic capacitor as close as possible to the pin.	GNDB

## Typical Application Circuit

## Detailed Description

The MAX14937 is a two-channel, 5kV<sub>RMS</sub> I<sup>2</sup>C isolator utilizing Maxim's proprietary process technology. For applications requiring 2.75kV<sub>RMS</sub> of isolation, refer to the MAX14933 data sheet. The MAX14937 transfers digital signals between circuits with different power domains at ambient temperatures up to +125°C.

The device offers two bidirectional, open-drain channels for applications, such as I<sup>2</sup>C, that require data to be transmitted in both directions on the same line.

The device features independent 2.25V to 5.5V supplies on each side of the isolator. The device operates from DC to 1.7MHz and can be used in isolated I<sup>2</sup>C busses with clock stretching. The wide temperature range and high isolation voltage make the device ideal for use in harsh industrial environments.

### Digital Isolation

The device provides galvanic isolation for digital signals that are transmitted between two ground domains. Up to 1200V<sub>PEAK</sub> of continuous isolation is supported as well as transient differences of up to 5kV<sub>RMS</sub> for up to 60s.

### Bidirectional Channels

The device features two bidirectional channels that have open-drain outputs. The bidirectional channels do not require a direction-control input. A logic-low on one side causes the corresponding pin on the other side to be pulled low while avoiding data-latching within the device. The input logic-low thresholds ( $V_{IL}$ ) of I/OA1 and I/OA2 are at least 50mV lower than the output logic-low voltages of I/OA1 and I/OA2. This prevents an output logic-low on side A from being accepted as an input low and subsequently transmitted to side B, thus preventing a latching action. The I/OA1, I/OA2, I/OB1, and I/OB2 pins have open-drain outputs, requiring pullup resistors to their respective supplies for logic-high outputs. The output low voltages are guaranteed for sink currents of up to 30mA for side B, and 3mA for side A (see the [DC Electrical Characteristics](#) table). The device supports I<sup>2</sup>C clock stretching.

## Startup and Undervoltage Lockout

The V<sub>DDA</sub> and V<sub>ddb</sub> supplies are both internally monitored for undervoltage conditions. Undervoltage events can occur during power-up, power-down, or during normal operation due to a sagging supply voltage. When an undervoltage event is detected on either of the supplies, all bidirectional outputs become high-impedance and are pulled high by the external pullup resistor on the open-drain outputs ([Table 1](#)). [Figure 2](#) through [Figure 5](#) shows the behavior of the outputs during power-up and power-down.

## Applications Information

### Effect of Continuous Isolation on Lifetime

High-voltage conditions cause insulation to degrade over time. Higher voltages result in faster degradation. Even the high-quality insulating material used in the device can degrade over long periods of time with a constant high voltage across the isolation barrier.

### Power-Supply Sequencing

The MAX14937 does not require special power-supply sequencing. The logic levels are set independently on either side by V<sub>DDA</sub> and V<sub>ddb</sub>. Each supply can be present over the entire specified range regardless of the level or presence of the other supply.

### Power-Supply Decoupling

To reduce ripple and the chance of introducing data errors, bypass V<sub>DDA</sub> and V<sub>ddb</sub> with 0.1μF ceramic capacitors to G<sub>NDA</sub> and G<sub>NDB</sub>, respectively. Place the bypass capacitors as close as possible to the power-supply input.

### Input/Output Capacitive Loads

For optimal performance, ensure that  $C_{LA} \leq 40\text{pF}$  and  $C_{LB} \leq 400\text{pF}$ .

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».
