ORDERING INSTRUCTIONS

Example: The relay selected in the example is a FORM AB 150-grid relay, current calibrated, end bracket mounting with 0.13-inch solder hook header, 210 ohms coil resistance, and 50 mW sensitivity. By choosing the proper code for each of these relay characteristics, the

catalog number is 3SBC6131E2. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBC6131E2R.

Note: Relays specified by catalog numbers (per above directions) are general-use items controlled by catalog specifications. Relays to be controlled by customer drawings — or relays having requirements not covered in this publication — will be assigned special catalog numbers upon request.

Type 3SCC (2PDT) 170 mW

Features

- 100,000,000 operations low-level signal loads
- RF designs available
- Low profile — .320 height
- Hermetic seal
- High reliability
- Performance tested

Description

The .150 Grid relay, the smallest (.320 inches high) 2 Amp Rated relay available in commercial and military qualified models, is now available in the long life version. Capable of over 100,000,000 mechanical operations at low level and signal load, the .150 Grid relay provides the simplicity of relays for circuit design, the low circuit resistance of precious metal

contact systems, and the long life processing that has made CII relays the standard for quality and reliability.
