

-16V Input Three Terminal Negative Voltage Regulator

■ GENERAL DESCRIPTION

The XC6902 Series is a negative voltage CMOS regulator which includes a reference voltage source, error amplifiers, driver transistors, current limiters and phase compensators.

XC6902 is a 3 terminal negative voltage regulator (without CE pin) which is capable of accepting -16V input.

The over current protection circuit will operate when the output current reaches limit current. The thermal shutdown circuit will operate when the junction temperature reaches limit temperature.

■ APPLICATIONS

- Negative power supplies
- Modules (Wireless LAN, Digital still cameras, etc)
- Digital still cameras
- Mobile devices / terminals

■ FEATURES

Maximum Output Current	: 200mA
Input Voltage Range	: -2.4 ~ -16V
Output Voltage Range	: -0.9 ~ -12V
Accuracy	: $\pm 1.5\%$ for -2.0V ~ -12V $\pm 30\text{mV}$ (-0.9V ~ -1.95V)
Temperature Stability	: TYP. $\pm 50\text{ppm}/^\circ\text{C}$
Dropout Voltage	: $400\text{mV}@I_{\text{OUT}}=100\text{mA}$
Low Power Consumption	: $100\ \mu\text{A}$
Protection Circuits	: Current Limit 350mA TYP. Foldback Thermal Shutdown (150°C)
Output Capacitor	: Ceramic Capacitor Compatible
Operating Ambient Temperature	: $-40^\circ\text{C} \sim +85^\circ\text{C}$
Packages	: SOT-23, SOT-89, USP-6C
Environmentally Friendly	: EU RoHS Compliant, Pb Free

NOTE:

The test condition for input voltage, Unless otherwise stated, GND=0V, $V_{IN}=V_{OUT(T)}-1.0V$ or $-2.4V$.

(*)1 $V_{OUT(T)}$: Nominal output voltage

(*)2 $V_{OUT(E)}$: Effective output voltage (see the voltage chart)

(ie. The output voltage when " $V_{OUT(T)}-1.0V$ " or " $-2.4V$ " is provided at the V_{IN} pin while maintaining a certain I_{OUT} value.

(*)3 $V_{dif} = -\{V_{IN1} - V_{OUT1}\}$

V_{IN1} is the input voltage when V_{OUT1} appears at the V_{OUT} pin while input voltage is gradually increased

V_{OUT1} is the voltage equal to 98% of the normal output voltage when amply stabilized $V_{OUT(T)}-1.0V$ or $-2.4V$ (the bigger absolute value one) are input at the V_{IN} pin.

(*)4 The maximum current may not be able to flow when thermal shutdown operates, it depends on power dissipation.

(*)5 E-1: Refer to Dropout Voltage Chart.

(*)6 Input voltage condition is $V_{IN}=0V \rightarrow V_{OUT}-1V$ with $5\mu s$ rising time.

Soft-start time t_{SS} is defined as the time taken from the 90% rising of V_{IN} to the 95% rising of $V_{OUT(E)}$.

OPERATIONAL EXPLANATION

The voltage divided by resistors R1 and R2 is compared with the internal reference voltage based on ground by the error amplifier. The driver transistor tied to the -V_{IN} pin is then driven by the subsequent output signal. The output voltage at the -V_{OUT} pin is controlled and stabilized by a system of negative feedback.

XC6902 Series

< Soft-Start Function >

The XC6902 series includes soft-start circuit. During power start-up, the inrush current from -V_{IN} pin to V_{OUT} pin to charge C_L capacitor can be reduced and it makes the V_{IN} stable. Soft-start time (t_{SS}) is optimized internally.

Figure1 : Soft-Start Time and Inrush Current

< Current Limiter, Short-Circuit Protection >

The XC6902 series fold-back circuit operates as an output current limiter and a short protection circuit for the output pin. When the output current reaches the current limit level, output voltage drops with the decrease of the output current. There are no parasitic diode between the -V_{OUT} pin and GND pin. The minimized short-circuit current is maintained even if the -V_{OUT} pin voltage is pulled up toward positive.

< Thermal Shutdown >

The XC6902 Series has an internal thermal shutdown (TSD) circuit for protection against overheating. When the junction temperature reaches the detection temperature, the driver transistor is forcibly turned off. When the junction temperature falls to the release temperature with the driver transistor still in the off state, the driver transistor turns on (automatic recovery) and restarts regulator operation.

■ OPERATIONAL EXPLANATION (Continued)

<Low ESR Capacitor>

With the XC6902 series, a stable output voltage is achievable even if used with low ESR capacitors, as a phase compensation circuit is built-in. The output capacitor (C_L) should be connected as close to V_{OUT} pin and GND pin to obtain stable phase compensation. Values required for the phase compensation are as the table below.

For a stable power input, please connect an input capacitor (C_{IN}) near power supply. In order to ensure the stable phase compensation while avoiding run-out of values, please use the capacitor (C_{IN} , C_L) which does not depend on bias or temperature too much. The table below shows recommended values of C_{IN} , C_L .

CHART 1 : Recommended Values of C_{IN} , C_L

OUTPUT VOLTAGE RANGE	INPUT CAPACITOR	OUTPUT CAPACITOR
$V_{OUT(T)}$	C_{IN}	C_L
-0.9V~-12V	1.0 μ F~	1.0 μ F~100 μ F

■ NOTES ON USE

1. Please use this IC within the stated maximum ratings. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please keep the resistance low for the $-V_{IN}$ and GND wiring in particular.
3. Please wire the C_{IN} and C_L as close to the IC as possible.
4. Capacitances of these capacitors (C_{IN} , C_L) are decreased by the influences of bias voltage and ambient temperature. Care shall be taken for capacitor selection to ensure stability of phase compensation from the point of ESR influence.
5. Torex places an importance on improving our products and its reliability.
However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.

1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.
3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.
4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.
5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.
6. Our products are not designed to be Radiation-resistant.
7. Please use the product listed in this datasheet within the specified ranges.
8. We assume no responsibility for damage or loss due to abnormal use.
9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
