

NB7VQ1006M

1.8V / 2.5V 10Gbps Equalizer Receiver with 1:6 Differential CML Outputs

Multi-Level Inputs w/ Internal Termination

Description

The NB7VQ1006M is a high performance differential 1:6 CML fanout buffer with a selectable Equalizer receiver. When placed in series with a Data path operating up to 10 Gb/s, the NB7VQ1006M will compensate the degraded data signal transmitted across a FR4 PCB backplane or cable interconnect and output six identical CML copies of the input signal. Therefore, the serial data rate is increased by reducing Inter-Symbol Interference (ISI) caused by losses in copper interconnect or long cables.

The Equalizer Enable pin (EQEN) allows the IN/ $\overline{\text{IN}}$ inputs to either flow through or bypass the Equalizer section. Control of the Equalizer function is realized by setting EQEN; When EQEN is set Low, the IN/ $\overline{\text{IN}}$ inputs bypass the Equalizer. When EQEN is set High, the IN/ $\overline{\text{IN}}$ inputs flow through the Equalizer. The default state at startup is LOW. As such, the NB7VQ1006M is ideal for SONET, GigE, Fiber Channel, Backplane and other Data distribution applications.

The differential inputs incorporate internal 50 Ω termination resistors that are accessed through the VT pin. This feature allows the NB7VQ1006M to accept various logic level standards, such as LVPECL, CML or LVDS. This feature provides transmission line termination at the receiver, eliminating external components. The outputs have the flexibility of being powered by either a 1.8 V or 2.5 V supply.

The NB7VQ1006M is a member of the GigaComm™ family of high performance Clock/Data products.
