**MCP19215  
Dual Boost/SEPIC  
Evaluation Board  
User's Guide**

---

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**Object of Declaration: MCP19215 Dual Boost/SEPIC Evaluation Board**

EU Declaration of Conformity

This declaration of conformity is issued by the manufacturer.

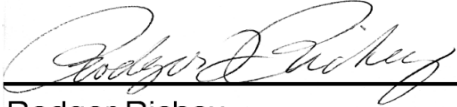

The development/evaluation tool is designed to be used for research and development in a laboratory environment. This development/evaluation tool is not a Finished Appliance, nor is it intended for incorporation into Finished Appliances that are made commercially available as single functional units to end users under EU EMC Directive 2004/108/EC and as supported by the European Commission's Guide for the EMC Directive 2004/108/EC (8th February 2010).

This development/evaluation tool complies with EU RoHS2 Directive 2011/65/EU.

This development/evaluation tool, when incorporating wireless and radio-telecom functionality, is in compliance with the essential requirement and other relevant provisions of the R&TTE Directive 1999/5/EC and the FCC rules as stated in the declaration of conformity provided in the module datasheet and the module product page available at [www.microchip.com](http://www.microchip.com).

For information regarding the exclusive, limited warranties applicable to Microchip products, please see Microchip's standard terms and conditions of sale, which are printed on our sales documentation and available at [www.microchip.com](http://www.microchip.com).

Signed for and on behalf of Microchip Technology Inc. at Chandler, Arizona, USA.

### NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site ([www.microchip.com](http://www.microchip.com)) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXXXXXA”, where “XXXXXXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE online help. Select the Help menu, and then Topics to open a list of available online help files.

## INTRODUCTION

This chapter contains general information that will be useful to know before using the MCP19215 Dual Boost/SEPIC Evaluation Board. Items discussed in this chapter include:

- Document Layout
- Conventions Used in this Guide
- Recommended Reading
- The Microchip Web site
- Development Systems Customer Change Notification Service
- Customer Support
- Document Revision History

## DOCUMENT LAYOUT

This document describes how to use the MCP19215 Dual Boost/SEPIC Evaluation Board as a development tool to emulate and debug firmware on a target board. The manual layout is as follows:

- **Chapter 1. “Product Overview”** – Includes a short overview of the MCP19215 device, and a general description of the MCP19215 Dual Boost/SEPIC Evaluation Board.
- **Chapter 2. “Installation and Operation”** – Includes instructions on how to get started with the MCP19215 Dual Boost/SEPIC Evaluation Board, a detailed description of the board, and the typical waveforms that are obtained from the board.
- **Appendix A. “Schematic and Layouts”** – Shows the schematic and layout diagrams for the MCP19215 Dual Boost/SEPIC Evaluation Board.
- **Appendix B. “Bill of Materials (BOM)”** – Lists the parts used to build the MCP19215 Dual Boost/SEPIC Evaluation Board.

# MCP19215 Dual Boost/SEPIC Evaluation Board User's Guide

## CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

### DOCUMENTATION CONVENTIONS

Description	Represents	Examples
<b>Arial font:</b>		
Italic characters	Referenced books	<i>MPLAB® IDE User's Guide</i>
	Emphasized text	...is the <i>only</i> compiler...
Initial caps	A window	the Output window
	A dialog	the Settings dialog
	A menu selection	select Enable Programmer
Quotes	A field name in a window or dialog	"Save project before build"
Underlined, italic text with right angle bracket	A menu path	<u>File</u> > <i>Save</i>
Bold characters	A dialog button	Click <b>OK</b>
	A tab	Click the <b>Power</b> tab
N'Rnnnn	A number in verilog format, where N is the total number of digits, R is the radix and n is a digit.	4'b0010, 2'hF1
Text in angle brackets < >	A key on the keyboard	Press <Enter>, <F1>
<b>Courier New font:</b>		
Plain Courier New	Sample source code	#define START
	Filenames	autoexec.bat
	File paths	c:\mcc18\h
	Keywords	_asm, _endasm, static
	Command-line options	-Opa+, -Opa-
	Bit values	0, 1
	Constants	0xFF, 'A'
Italic Courier New	A variable argument	<i>file.o</i> , where <i>file</i> can be any valid filename
Square brackets [ ]	Optional arguments	mcc18 [options] <i>file</i> [options]
Curly brackets and pipe character: {   }	Choice of mutually exclusive arguments; an OR selection	errorlevel {0 1}
Ellipses...	Replaces repeated text	var_name [, var_name...]
	Represents code supplied by user	void main (void) { ... }

## RECOMMENDED READING

This user's guide describes how to use the MCP19215 Dual Boost/SEPIC Evaluation Board. Other useful documents are listed below. The following Microchip documents are available and recommended as supplemental reference resources:

- **MCP19214/5 – “Digitally-Enhanced Power Analog, Dual Channel, Low-Side PWM Controller” (DS20005681)** – This data sheet provides detailed information regarding the MCP19214/5 devices.
- **MCP19214/5 – “Monitoring Graphical Interface User’s Guide” (DS50002557)** – This user’s guide includes information on how to install, understand, and use the monitoring and calibration tool for the MCP19214/5 devices.

## THE MICROCHIP WEB SITE

Microchip provides online support via our web site at [www.microchip.com](http://www.microchip.com). This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user’s guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

## DEVELOPMENT SYSTEMS CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip’s customer notification service helps keep customers current on Microchip products. Subscribers will receive an e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at [www.microchip.com](http://www.microchip.com), click on Customer Change Notification and follow the registration instructions.

The Development Systems product group categories are:

- **Compilers** – The latest information on Microchip C compilers, assemblers, linkers and other language tools. These include all MPLAB C compilers; all MPLAB assemblers (including MPASM assembler); all MPLAB linkers (including MPLINK object linker); and all MPLAB librarians (including MPLIB object librarian).
- **Emulators** – The latest information on Microchip in-circuit emulators. This includes the MPLAB REAL ICE™ and MPLAB ICE 2000 in-circuit emulators.
- **In-Circuit Debuggers** – The latest information on the Microchip in-circuit debuggers. This includes MPLAB ICD 3 in-circuit debuggers and PICKit 3 Debug Express.
- **MPLAB IDE** – The latest information on Microchip MPLAB IDE, the Windows Integrated Development Environment for development systems tools. This list is focused on the MPLAB IDE, MPLAB IDE Project Manager, MPLAB Editor and MPLAB SIM simulator, as well as general editing and debugging features.
- **Programmers** – The latest information on Microchip programmers. These include production programmers such as MPLAB REAL ICE in-circuit emulator, MPLAB ICD 3 in-circuit debugger and MPLAB PM3 device programmers. Also included

# MCP19215 Dual Boost/SEPIC Evaluation Board User's Guide

---

---

are nonproduction development programmers such as PICSTART Plus and PICKit 2 and 3 programmers.

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at:

<http://www.microchip.com/support>.

## DOCUMENT REVISION HISTORY

### Revision A (March 2017)

- Initial Release of this Document.

### Revision B (August 2017)

- Corrected typographical errors.

---

---

## Chapter 1. Product Overview

---

---

### 1.1 INTRODUCTION

This chapter provides an overview of the MCP19215 Dual Boost/SEPIC Evaluation Board and covers the following topics:

- [MCP19215 Device – Short Overview](#)
- [What Is the MCP19215 Dual Boost/SEPIC Evaluation Board?](#)
- [What Does the MCP19215 Dual Boost/SEPIC Evaluation Board Kit Include?](#)

### 1.2 MCP19215 DEVICE – SHORT OVERVIEW

The MCP19215 is a highly-integrated, digitally-enhanced Pulse Width Modulation (PWM) controller used for low-side switch PWM applications such as battery chargers, bidirectional converters and LED lighting systems.

Since the MCP19215 uses traditional analog control circuitry to regulate the output of the DC/DC converter, the integration of the PIC<sup>®</sup> controller mid-range core is used to provide complete customization of device operating parameters, start-up and shut-down profiles, protection levels and fault handling procedures.

The MCP19215 is designed to efficiently operate from a single 4.5V-42V supply. It features integrated synchronous drivers, a bootstrap device, an internal linear regulator and 8K word nonvolatile memory, all in a space-saving 32-pin, 5 x 5 mm QFN package.

After initial device configuration by using Microchip's MPLAB<sup>®</sup> X Integrated Development Environment (IDE) software, I<sup>2</sup>C communication can be used by a host to communicate with or modify the operation of the MCP19215.

An internal 5V rail provides power to the PIC controller, and is also present on the V<sub>DD</sub> pin. It is recommended that a minimum 4.7 μF capacitor be placed between V<sub>DD</sub> and P<sub>GND</sub>. The V<sub>DD</sub> pin may also be directly connected to the V<sub>DR</sub> pin or connected through a low-pass RC filter. The V<sub>DR</sub> pin provides power to the internal synchronous driver.

# MCP19215 Dual Boost/SEPIC Evaluation Board User's Guide

**FIGURE 1-1:** MCP19215 Typical Application Circuit.

## 1.3 WHAT IS THE MCP19215 DUAL BOOST/SEPIC EVALUATION BOARD?

The MCP19215 Dual Boost/SEPIC Evaluation Board demonstrates how the MCP19215 device operates in Boost and SEPIC topologies over a wide input voltage and load range. Nearly all operational and control system parameters are programmable by utilizing the integrated PIC controller.

For precise measurements of output current, a 0.1Ω shunt is used on each channel. Output current is measured using an internal op amp.

The Graphical User Interface (GUI) can be used to program the functioning parameters, and check operational status. To simplify the connection, a USB-to-I<sup>2</sup>C communication bridge is implemented on board, using the MCP2221-I/SL SOIC 14-Lead, allowing standard interface to any Microsoft® Windows® computer.

Alternatively, users can program the MCP19215 using their own firmware, further tailoring it to the application, using the MPLAB<sup>®</sup> X Integrated Development Environment (IDE) and a PICkit<sup>™</sup> 3 Programmer/Debugger on the J5 Header (see [Figure 2-1](#)).

The MCP19215 Dual Boost/SEPIC Evaluation Board board is equipped with headers for In-Circuit Serial Programming<sup>™</sup> (ICSP<sup>™</sup>), a mini-USB type B for communication, and test point pads on each GPIO pin.

The MCP19215 Dual Boost/SEPIC Evaluation Board is also intended to demonstrate an optimized Printed Circuit Board (PCB) layout that minimizes parasitic noise while increasing efficiency and power density. Proper PCB layout is critical to achieve optimum MCP19215 operation, as well as power train efficiency and noise minimization.

The MPLAB X (IDE), the MCP19215 monitoring graphical user interface, and example firmware are available for download from the Microchip web site, at [www.microchip.com](http://www.microchip.com).

## 1.4 WHAT DOES THE MCP19215 DUAL BOOST/SEPIC EVALUATION BOARD KIT INCLUDE?

This MCP19215 Dual Boost/SEPIC Evaluation Board kit includes:

- The MCP19215 Dual Boost/SEPIC Evaluation Board (ADM00799)
- USB A to Mini-USB Type B Cable
- Important Information Sheet

# MCP19215 Dual Boost/SEPIC Evaluation Board User's Guide

---

---

NOTES:

---

---

## Chapter 2. Installation and Operation

---

---

### 2.1 INTRODUCTION

This chapter provides a detailed description of the MCP19215 Dual Boost/SEPIC Evaluation Board, instructions on how to begin using the board, and lists the typical waveforms obtained from the board.

The chapter is laid out as follows:

- [MCP19215 Dual Boost/SEPIC Evaluation Board Features](#)
- [Getting Started](#)
- [Setup Procedure](#)
- [Operating the MCP19215 Dual Boost/SEPIC Evaluation Board](#)
- [Typical Performance Data and Waveforms](#)

### 2.2 MCP19215 DUAL BOOST/SEPIC EVALUATION BOARD FEATURES

The MCP19215 Dual Boost/SEPIC Evaluation Board was developed to provide a compact, low-cost and highly-efficient DC/DC conversion for low-to-medium output currents.

The key features of the MCP19215 Dual Boost/SEPIC Evaluation Board include:

- input voltage range: 8V-5V
- output voltage: 20V for both channels (can be software adjusted from input voltage + 1V-4V for channel 1, and 9V-24V for channel 2)
- maximum output current: 1A (can be software adjusted from 0A to 1A; the board default setting is 0.2A)
- 300 kHz switching frequency (can be software adjusted from 100 kHz to 2 MHz)
- on-board high performance power MOSFET transistors
- overcurrent and overvoltage protection
- status report (including errors, input voltage, output voltage and current) via I<sup>2</sup>C communication
- under voltage lockout (UVLO) with programmable thresholds (via software)

### 2.3 GETTING STARTED

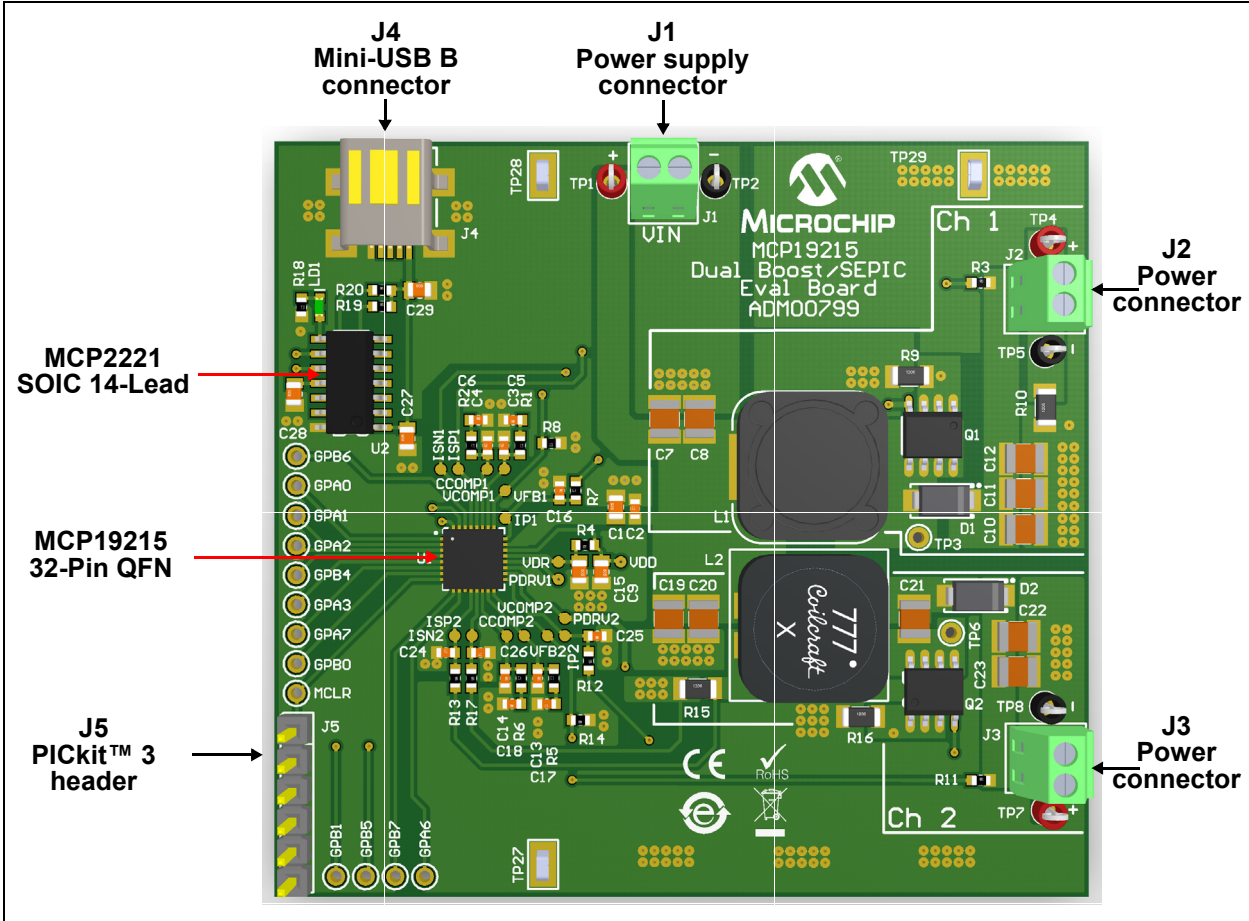

The MCP19215 Dual Boost/SEPIC Evaluation Board is fully assembled and tested to evaluate and demonstrate the MCP19215 device capabilities.

#### 2.3.1 Necessary Instruments and Tools Required for Operation

- Adjustable DC power supply with 0V-5V/2 A<sub>DC</sub> range output capability
- Electronic load with at least 2A current capability and load stepping capability
- Digital oscilloscope with a minimum bandwidth of 50 MHz
- Digital voltmeter/ammeter
- Wires for connections; these wires must sustain high currents:
  - 4A for the connection between the adjustable DC power supply and board
  - 2A for the connection between the board and the electronic load

# MCP19215 Dual Boost/SEPIC Evaluation Board User's Guide

## 2.4 SETUP PROCEDURE

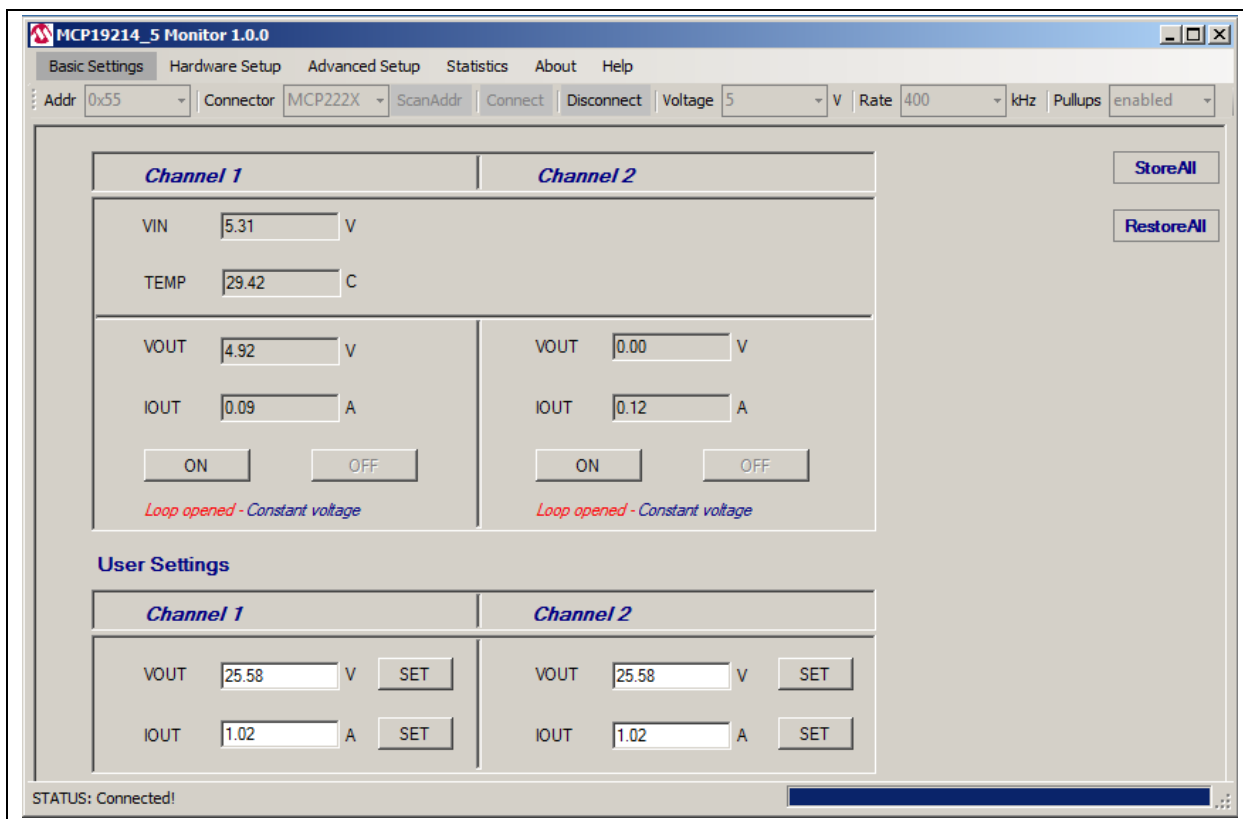

**FIGURE 2-1:** MCP19215 Dual Boost/SEPIC Evaluation Board – Top View.

To power up the MCP19215 Dual Boost/SEPIC Evaluation Board, the following steps must be completed:

1. connect the electronic load to the J2 and/or J3 connector on the board by observing the polarity; the positive (+) and negative (-) connector pins are marked on the board silkscreen (refer to [Figure 2-1](#)).
2. connect the adjustable DC power supply to the J1 connector on the board by matching the polarity to the positive (+) and negative (-) connector pins marked on the board silkscreen (refer to [Figure 2-1](#)).
3. set the DC voltage supplied by the adjustable DC power supply to 12V.

- connect the board to a PC (on which the MCP19214/5 Monitoring GUI is installed) via the USB-A to mini-USB type B cable supplied, by using the J4 connector on the board.

**FIGURE 2-2:** MCP19214/5 Monitoring GUI.

- after powering up, the output voltage is automatically enabled on for both channels. Alternatively, the output voltage may be enabled or disabled individually for each channel by using the **ON** and **OFF** buttons in the GUI.
- the board is factory set to deliver 20V at 1A maximum, with the loop adjusted for optimum performance, and current measurement performed through the internal op amp.  
If different settings are desired, changes may be performed in two ways:
  - through the I<sup>2</sup>C-to-USB on-board interface. Refer to the MCP19214/5 Monitoring GUI User Guide for details.
  - by the user's own software that can be loaded into the MCP19215 by connecting J5 on the board to a PICKit™3 or another suitable programming tool (see [Figure 2-1](#)).

# MCP19215 Dual Boost/SEPIC Evaluation Board User's Guide

## 2.5 OPERATING THE MCP19215 DUAL BOOST/SEPIC EVALUATION BOARD

Figure 2-3 shows the board typical test setup.

**FIGURE 2-3:** MCP19215 Dual Boost/SEPIC Evaluation Board – Typical Test Setup.

Table 2-1 lists all the available test points on the board.

The user can connect various instruments to the listed test points to evaluate the parameters of the converter. The typical performance data, curves and waveforms are presented in [Section 2.6](#).

**TABLE 2-1: TEST POINTS DESCRIPTION**

Label	Function	Description
TP1_GND TP2_GND TP3_GND	GND	Power GND
TP1	$V_{IN (+)}$	Input Voltage (+)

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
