

**General Description**

The MAX7375 is a silicon oscillator, intended as a low-cost improvement replacing ceramic resonators, crystals, and crystal oscillator modules used as the clock source for micro-controllers and UARTs in 3V, 3.3V, and 5V applications.

The MAX7375 is a fully integrated oscillator, supplied at specific factory-trimmed frequencies with a rail-to-rail 50% duty cycle square-wave output. The oscillator frequency is generated directly without the use of a phase-locked loop (PLL). No additional components are used to set or adjust the frequency.

Unlike typical crystal and ceramic resonator oscillator circuits, the MAX7375 is highly resistant to vibration and EMI. The high output drive current and absence of high-impedance nodes also makes the oscillator less susceptible to dirty or humid operating conditions. With a wide operating temperature range, the oscillator is a good choice for demanding home appliance environments.

Available in 3-pin space-saving SC70 package, the MAX7375 is offered in standard and nonstandard factory-set frequencies ranging from 600kHz to 9.99MHz. See the MAX7381 data sheet for frequencies  $\geq 10$ MHz. The MAX7375's standard operating temperature range is  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ . See the *Applications Information* section for extended operating temperature range.

**Applications**

- White Goods
- Appliances and Controls
- Hand-Held Products
- Portable Equipment
- Microcontroller Systems

**Typical Application Circuit**

**Features**

- 2.7V to 5.5V Operation
- Factory-Trimmed Oscillator (600kHz to 9.99MHz)
- No External Components Required
- $\pm 10$ mA Output Drive Current
- 2% Initial Accuracy
- $\pm 50$ ppm/ $^{\circ}\text{C}$  Temp Drift
- Fast Startup Time: 5 $\mu\text{s}$
- 40% to 60% Maximum Duty Cycle
- 5ns Output Rise and Fall Time-Low EMI
- Very Low EMI Susceptibility-No High-Impedance Nodes
- Very Low Jitter: 160ps<sub>p-p</sub> at 8MHz
- Tiny Surface-Mount Package (SC70)
- $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  Temperature Range

**Ordering Information**

PART	TEMP RANGE	PIN-PACKAGE
MAX7375AXR105-T	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	3 SC70-3
MAX7375AXR185-T	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	3 SC70-3
MAX7375AXR365-T	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	3 SC70-3
MAX7375AXR375-T	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	3 SC70-3
MAX7375AXR405-T	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	3 SC70-3
MAX7375AXR425-T	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	3 SC70-3
MAX7375AXR805-T	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	3 SC70-3

**Note:** The MAX7375 is available in factory-set frequencies from 600kHz to 9.99MHz. There are seven standard versions (1MHz, 1.84MHz, 3.58MHz, 3.69MHz, 4MHz, 4.19MHz, and 8MHz, as shown in the Selector Guide) with a required 2.5k order increment. Nonstandard frequencies are also available with a required 10k order increment. For nonstandard versions, contact factory for availability and ordering information. All versions available in tape-and-reel only.

**Pin Configuration and Selector Guide appear at end of data sheet.**

### Absolute Maximum Ratings

V+ to GND.....	-0.3V to +6V	Operating Temperature Range.....	-55°C to +135°C
CLOCK to GND.....	-0.3V to (V+ + 0.3V)	Junction Temperature.....	+150°C
Continuous Power Dissipation (T <sub>A</sub> = +70°C)		Storage Temperature Range.....	-65°C to +150°C
3-Pin SC70 (derate 2.9mW/°C over +70°C).....	235mW	Lead Temperature (soldering, 10s).....	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### Electrical Characteristics

(V+ = 2.7V to 5.5V, T<sub>A</sub> = -40°C to +125°C, unless otherwise noted. Typical values are at V+ = 5V, T<sub>A</sub> = +25°C, unless otherwise noted.)  
(Note 1)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Operating Supply Voltage	V+		2.7		5.5	V
Operating Supply Current	I+	MAX7375A_R105		0.55	1.1	mA
		MAX7375A_R185		0.8	1.25	
		MAX7375A_R405		1.7	4.2	
		MAX7375A_R805		3.2	6.4	
Output High Voltage	V <sub>OH</sub>	V+ ≥ 2.7V, I <sub>SOURCE</sub> = 2.5mA	V+ - 0.4		V	
		V+ ≥ 4.5V, I <sub>SOURCE</sub> = 9mA	V+ - 0.4			
Output Low Voltage	V <sub>OL</sub>	V+ ≥ 2.7, I <sub>SINK</sub> = 10mA	0.4		V	
		V+ ≥ 4.5V, I <sub>SINK</sub> = 20mA	0.4			
Initial CLOCK Frequency Accuracy	f <sub>CLOCK</sub>	V+ = 3.0V, T <sub>A</sub> = +25°C (Note 2)    MAX7375A_R_ _ _	-2		+2	%
		V+ = 2.7V to 5.5V, T <sub>A</sub> = +25°C (Note 2)    MAX7375A_R_ _ _	-4		+4	
CLOCK Frequency Temperature Sensitivity		(Note 3)		±50	±325	ppm/°C
Duty Cycle		(Note 3)	45	52	57	%
Output Jitter		Observation for 20s using a 500MHz oscilloscope (MAX7375A_R805)		160		pSP-P
Output Rise Time	t <sub>R</sub>	(Note 3)		5.0		ns
Output Fall Time	t <sub>F</sub>	(Note 3)		2.5		ns

**Note 1:** All parameters are tested at T<sub>A</sub> = +25°C. Specifications over temperature are guaranteed by design and characterization.

**Note 2:** Typical frequencies are nominal values.

**Note 3:** Guaranteed by design and characterization. Not production tested.

Typical Operating Characteristics

(V+ = 5V, TA = +25°C, CL = 10pF, 8MHz output, unless otherwise noted.)

**Typical Operating Characteristics (continued)**

(V+ = 5V, TA = +25°C, CL = 10pF, 8MHz output, unless otherwise noted.)

**Pin Description**

PIN	NAME	FUNCTION
SC70		
1	V+	Positive Supply Voltage
2	CLOCK	Clock Output. Output is push-pull.
3	GND	Ground

**Detailed Description**

The MAX7375 is a replacement for ceramic resonators, crystals, and crystal oscillator modules as the clock source for microcontrollers and UARTs in 3V, 3.3V, and 5V applications. The MAX7375 is an integrated oscillator, supplied at specific frequencies just like crystals and resonators. A variety of popular standard frequencies are available. No external components are required for setting or adjusting the frequency.

**Supply Voltages**

The MAX7375 has been designed for use in systems with nominal supply voltages of 3V, 3.3V, or 5V and is specified for operation with supply voltages in the 2.7V to 5.5V range. Operation outside this range is not guaranteed. See the *Absolute Maximum Ratings* table for limit values of power-supply and pin voltages.

**Oscillator**

The clock output is a push-pull configuration and is capable of driving a ground-connected 1kΩ load or a positive

supply connected 500Ω load to within 300mV of either supply rail. The clock output remains stable over the full operating voltage range and does not generate short output cycles during either power on or power off. A typical startup characteristic is shown in the *Typical Operating Characteristics* section.

**Output Jitter**

The MAX7375's jitter performance is given in the *Electrical Characteristics* table as a peak-to-peak value obtained by observing the output of the MAX7375 for 20s with a 500MHz oscilloscope. Jitter measurements are approximately proportional to the period of the output frequency of the device. Thus, a 4MHz part has approximately twice the jitter value of an 8MHz part.

The jitter performance of all clock sources degrades in the presence of mechanical and electrical interference. The MAX7375 is relatively immune to vibration, shock, and EMI influences and thus provides a considerably more robust clock source than crystal- or ceramic-resonator-based oscillator circuits.

## Applications Information

### Interfacing to a Microcontroller Clock Input

The MAX7375 clock output is a push-pull, CMOS, logic output, which directly drives any microprocessor ( $\mu\text{P}$ ) or microcontroller ( $\mu\text{C}$ ) clock input. There are no impedance-matching issues when using the MAX7375. Operate the MAX7375 and microcontroller (or other clock input device) from the same supply voltage level. Refer to the microcontroller data sheet for clock input compatibility with external clock signals.

The MAX7375 requires no biasing components or load capacitance. When using the MAX7375 to retrofit a crystal oscillator, remove all biasing components from the oscillator input.

### Startup Performance

The MAX7375 oscillator output stabilizes within a few cycles of operation after  $V+$  rises to a sufficient voltage to start the oscillator, typically 1.65V at +25°C. Use a reset or similar voltage-detection circuit to disable devices connected to the MAX7375 until 5 $\mu\text{s}$  after the voltage on  $V+$  has risen above 2.7V.

## Selector Guide

PART	FREQUENCY (MHz)	TOP MARK
MAX7375AXR105	1.00	AOV
MAX7375AXR185	1.84	AOU
MAX7375AXR365	3.58	AOT
MAX7375AXR375	3.69	AOS
MAX7375AXR405	4.00	AOR
MAX7375AXR425	4.19	AOQ
MAX7375AXR805	8.00	AOP

### Extended Temperature Operation

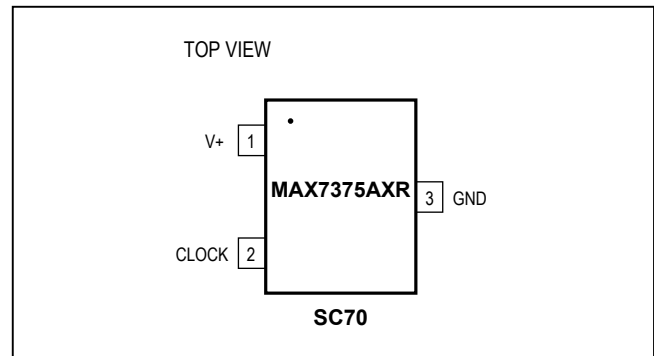

The MAX7375 was tested to +135°C during product characterization and shown to function normally at this temperature (see *Typical Operating Characteristics*). However, production test and qualification is only performed from -40°C to +125°C at this time. Contact the factory if operation outside this range is required.

### Power-Supply Considerations

The MAX7375 operates with power-supply voltages in the 2.7V to 5.5V range. Good power-supply decoupling is needed to maintain the power-supply rejection performance of the MAX7375. Use a 0.1 $\mu\text{F}$  surface-mount ceramic capacitor connected between  $V+$  and GND and mounted as close as possible to the device. If possible, mount the MAX7375 close to the microcontroller's decoupling capacitor so that additional decoupling is not required.

A larger value of bypass capacitor is recommended if the MAX7375 is to operate with a large capacitive load. Use a bypass capacitor value of at least 1000 times that of the output load capacitance.

## Pin Configuration

## Chip Information

PROCESS: BiCMOS

### Package Information

For the latest package outline information and land patterns (footprints), go to [www.maximintegrated.com/packages](http://www.maximintegrated.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

PACKAGE TYPE	PACKAGE CODE	DOCUMENT NO.	LAND PATTERN NO.
3 SC70	X3-2	<a href="#">21-0075</a>	<a href="#">90-0208</a>

## Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
0	10/03	Initial release	—
1	—	—	—
2	—	—	—
3	12/07	Removed all references to MAX7375AUR_ and SOT23 package	1, 2, 4, 5
4	4/14	Removed automotive reference from <i>General Description</i> and <i>Applications</i>	1

For pricing, delivery, and ordering information, please contact Maxim Direct at 1-888-629-4642, or visit Maxim Integrated's website at [www.maximintegrated.com](http://www.maximintegrated.com).

Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the Electrical Characteristics table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
