Introducing ATC's New WL Series, High Frequency Wire Wound Chip Inductors

ATC introduces its new family of RF surface mount inductor components, intended to complement its high frequency ultra low ESR capacitor products. The WL Series Wire Wound Chip Inductor Products have been designed to provide excellent performance at competitive prices.

This Series includes the most widely used traditional EIA case sizes – 0402, 0603, 0805, 1008, and 1206. The WL Inductor Product line is intended for RF and microwave applications and features high self-resonant frequencies (SRF), high Q, and low DC resistance. These products are manufactured on a rugged core made of high quality ceramic material that exhibits high Q at high operating frequencies.

The WL Series is especially attractive for all 800 MHz to 3.4 GHz wireless applications where cost and performance are major factors. These applications include but are not limited to: cellular base stations, broadband wireless services, point-to-point and point-to-multipoint radio as well as other RF and microwave telecommunications systems.

All WL Series Inductor Products are supplied in tape and reel (2000 to 4000 parts per reel depending on case size) as standard, making them ideal for automated pick and place manufacturing applications. The terminations consist of a barrier layer with a lead-free tin-plated finish that exhibits excellent solderability for trouble-free attachments.

ATC WL SERIES WIRE WOUND CHIP INDUCTORS

Inductor Quality Assurance:

ATC ensures that all of its contracted component manufacturing facilities are ISO 9000 Registered, and that an outgoing product quality level of better than 100 PPM is maintained. ATC's WL Series products have successfully passed the most rigorous environmental, mechanical and electrical validations. All manufacturing lots receive a tollgate sample inspection of the primary parameter values used to specify an inductor. The test equipment and fixtures listed below in the RF Measurement Table are used to verify RF performance parameters for ATC's WL Series Inductor Products.

Quality and Reliability Testing - Environmental

Item	Examination	Test Method	Performance Specs.
1	High Temperature Storage	Inductors are subjected to +125°C for 48 hours, then tested after 1 hour at room temperature.	- Inductors shall not have a shorted or open winding - Change in inductance shall not change more than ±5%. - Change in Q shall not change more than ±10%.
2	Low Temperature Storage	Inductors are subjected to -40°C for 48 hours, then tested after 1 hour at room temperature	
3	Thermal Shock	Inductors are subjected to 10 cycles of -40°C for 30 min. and +125°C for 30 min., then tested after 1 hour at room temperature.	
4	Moisture Resistance	Inductors are subjected to 10 25-hour cycles from 25°C to 65°C at 80 to 90% RH, and are exposed to -10°C for 3 hours during one of the cycles. Samples are then tested after 2 hours at room temperature.	
5	Life Test	Inductors are subjected to 110°C for 1,000 hours at rated current. Samples are then tested after 1 hour at room temperature.	

Quality and Reliability Testing - Mechanical

Item	Examination	Test Method	Performance Specifications
1	Solderability Dip	Dip terminals into molten Sn63 at 235°C for 5 sec.	Terminals shall exhibit a continuous solder coating free of defects for a minimum of 95% of surface.
2	Adhesion	Reflow solder to circuit lands. A force gauge is applied to side of component	1 lb. for 0402, 2 lbs. for 0603, 4 lbs. for all larger parts
3	Vibration	10 to 2000 Hz, 5 Gs for 20 minutes, 12 cycles each, 3 orientations	1. No mechanical damage 2. Change in L less than ±5% 3. Change in Q less than ±10%
4	Mechanical Shock	MIL-STD-202, method 213, condition A. Test mounted parts 2 axes 6 times (50 G's, 11 ms, half-sine).	1. No mechanical damage 2. Change in L less than ±5% 3. Change in Q less than ±10%
