

## Watchdog Timeout Period Externally Adjustable Voltage Detector

## ■ GENERAL DESCRIPTION

The XC6130/XC6131 series are voltage detectors with a watchdog function. The watchdog timeout time and release delay time can be set as desired using a single external capacitor. These voltage detectors are used for microprocessor monitoring, and when the power voltage reaches the detect voltage or an L→H pulse is not input to the watchdog pin within the watchdog timeout time, an L level signal is output from the RESETB pin.

The XC6130 series has a manual reset function. When the manual reset pin is set to Low level at any desired timing, an L level signal is output from the RESETB pin.

The XC6131 series has a watchdog ON/OFF function. By setting the EN pin to L level, the watchdog function can be turned OFF while the voltage detector that monitors the power voltage continues to operate.

The MRB pin and EN pin are pulled up internally to  $V_{IN}$ , and thus these pins can be left open when not used.

## ■ APPLICATIONS

- Microprocessor reset and malfunction monitoring circuitry
- Memory battery backup circuits
- Power-on reset circuits
- Power failure detection

## ■ FEATURES

<b>Operating Ambient Temperature</b>	: -40°C~+125°C
<b>Operating Voltage Range</b>	: 1.5V~6.0V
<b>Detect Voltage Range</b>	: 1.6V~5.0V ( $\pm 1.0\%$ )
<b>Hysteresis Width</b>	: $V_{DFL} \times 5\%$
<b>Temperature Characteristics</b>	: $\pm 50\text{ppm}/^\circ\text{C}$
<b>Output Configuration</b>	: N-channel open drain output
<b>Low Power Consumption</b>	: 8.1 $\mu\text{A}$ Detect 9.8 $\mu\text{A}$ Release 2.5 $\mu\text{A}$ Release (EN=L)
<b>Function</b>	: Manual Reset (XC6130) : Watchdog function OFF (XC6131)
<b>WD Timeout Time</b>	: 100ms (Cd=0.1 $\mu\text{F}$ )
<b>Release Delay Time</b>	: 100ms (Cd=0.1 $\mu\text{F}$ ) (at power on) 10ms (Cd=0.1 $\mu\text{F}$ ) (After Watchdog Timeout)
<b>Package</b>	: SOT-26
<b>Environmentally Friendly</b>	: EU RoHS compliant, Pb free

## ■ TYPICAL APPLICATION CIRCUIT

## ■ TYPICAL PERFORMANCE CHARACTERISTICS

\* The above values do not include the current that flows to the EN pull-up resistance.

# XC6130/XC6131 Series

## ■ BLOCK DIAGRAM

● XC6130 Series Type A

● XC6131 Series Type A

\* Diodes inside the circuit are an ESD protection diode and a parasitic diode.

■ BLOCK DIAGRAM

● XC6131 Series Type B

\* Diodes inside the circuit are an ESD protection diode and a parasitic diode.

## ■ PRODUCT CLASSIFICATION

### ● Ordering Information

#### XC6130①②③④⑤⑥-⑦

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	TYPE	A	MRB pin With pull-up resistor
②③	Detect Voltage	16~50	e.g. 1.6V → ②=1, ③=6
④	Detect Accuracy	1	±1.0%
⑤⑥-⑦ (*1)	Package (Order Unit)	MR-G	SOT-26 (3000pcs/Reel)(*2)

(\*1) The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

(\*2) The SOT-26 reels are shipped in a moisture-proof packing.

#### XC6131①②③④⑤⑥-⑦

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	TYPE	A	EN pin With pull up resistor

## ■ PIN ASSIGNMENT

### XC6130 Series

PIN NUMBER	PIN NAME	FUNCTIONS
SOT-26		
1	WD	Watchdog Input
2	MRB	Manual Reset Input
3	V <sub>IN</sub>	Power Input
4	RESETB	Reset Output
5	V <sub>SS</sub>	Ground
6	Cd	Adjustable Pin for Release Delay Time/Watchdog Timeout

### XC6131 Series

PIN NUMBER	PIN NAME	FUNCTIONS
SOT-26		
1	WD	Watchdog Input
2	EN	Watchdog ON/OFF Control (XC6131A)
	ENB	Watchdog ON/OFF Control (XC6131B)
3	V <sub>IN</sub>	Power Input
4	RESETB	Reset Output
5	V <sub>SS</sub>	Ground
6	Cd	Adjustable Pin for Release Delay Time/Watchdog Timeout

## FUNCTION CHART

### 1) XC6130 Series

$V_{IN}^{*2}$	$V_{MRB}^{*3}$	$V_{WD}^{*6}$	$V_{RESETB}^{*7}$
H	H	H	L↔H
		L	
		OPEN	
		L↔H	H
H	L	*1	L
L	L		L
	H		L

### 2) XC6131A Series

$V_{IN}^{*2}$	$V_{EN}^{*4}$	$V_{WD}^{*6}$	$V_{RESETB}^{*7}$
H	H	H	L↔H
		L	
		OPEN	
		L↔H	H
H	L	*1	H
L	L		L
	H		L

### 3) XC6131B Series

$V_{IN}^{*2}$	$V_{ENB}^{*5}$	$V_{WD}^{*6}$	$V_{RESETB}^{*7}$
H	L	H	L↔H
		L	
		OPEN	
		L↔H	H
H	H	*1	H
L	L		L
	H		L

\*1: Includes all WD logic (VWD=H, L, OPEN, H→L, L→H)

\*2:  $V_{IN}=H$  indicates higher than the release voltage.

$V_{IN}=L$  indicates lower than the detect voltage.

\*3:  $V_{MRB}=H$  indicates MRB High Level Voltage.

$V_{MRB}=L$  indicates MRB Low Level Voltage.

Since MRB pin of XC6130 Series is pulled up internally, the open condition of MRB pin is acceptable when MR function is not required.

\*4:  $V_{EN}=H$  indicates EN High Level Voltage.

$V_{EN}=L$  indicates EN Low Level Voltage.

The EN pin of the XC6131A Series is pulled up internally, enabling the WD function to be used with EN open.

\*5:  $V_{ENB}=H$  indicates ENB High Level Voltage.

$V_{ENB}=L$  indicates ENB Low Level Voltage.

The ENB pin of the XC6131B Series is pulled down internally, enabling the WD function to be used with ENB open.

\*6:  $V_{WD}=H$  indicates WD High Level Voltage.

$V_{WD}=L$  indicates WD Low Level Voltage.

\*7:  $V_{RESETB}=H$  indicates the release state.

$V_{RESETB}=L$  indicates the detect state.

## ■ ABSOLUTE MAXIMUM RATINGS

XC6130 Series

Ta=25°C

PARAMETER		SYMBOL	RATINGS	UNITS
Input Voltage		V <sub>IN</sub>	-0.3~+7.0	V
WD Input Voltage		V <sub>WD</sub>	-0.3~+7.0	V
MRB Input Voltage		V <sub>MRB</sub>	-0.3~+7.0	V
Cd Pin Voltage		V <sub>Cd</sub>	-0.3~+V <sub>IN</sub> +0.3 or +7.0 <sup>(*)</sup>	V
Output Voltage		V <sub>RESETB</sub>	-0.3~+7.0	V

## OPERATIONAL EXPLANATION

In the XC6130/XC6131 Series, the voltage divided by RH, RX, and RY connected to the V<sub>IN</sub> pin is compared to the internal reference voltage by the comparator, and the resulting output signal drives the watchdog logic and output driver. The V<sub>IN</sub> pin voltage is gradually lowered, and when the V<sub>IN</sub> pin voltage reaches the detect voltage, H→L level signal is output to the reset output pin (V<sub>DFL</sub> type).

XC6130 Series

### <Output signal of reset output pin>

If the V<sub>IN</sub> pin voltage is below the detect voltage, the reset output pin outputs H→L level signal.

After the V<sub>IN</sub> pin voltage reaches the release voltage, the reset output pin holds L level during release delay time 1 (t<sub>DR1</sub>). If a start signal is not input to the WD pin within the watchdog timeout time, the reset output pin holds L level during release delay time 2 (t<sub>DR2</sub>) and then outputs H level signal.

### <Hysteresis>

If the internal comparator outputs L level signal, the PMOS transistor connected in parallel to RH turns ON and the hysteresis circuit activates. The hysteresis voltage width is obtained from the difference between the detect voltage and the release voltage.

The hysteresis width is (V<sub>DFL</sub> × 0.05) V (TYP.).

### <WD pin>

A watchdog timer is used to detect abnormal operation and runaway in a microprocessor. If “L→H” signal is not input from the microprocessor within the watchdog timeout time, the reset output pin holds the detect state during release delay time 2 (t<sub>DR2</sub>), and then L → H level signal is output to the reset output pin.

In addition, the watchdog pin is pulled down internally to V<sub>SS</sub>, and when the watchdog pin is OPEN, a reset signal is output after the watchdog timeout time.

The watchdog timeout time (t<sub>WD</sub>) can be set using the equation below.

$$t_{WD} = Cd \times 10^6$$

Example: When Cd is 0.1 μF, t<sub>WD</sub> = 0.1 × 10<sup>-6</sup> × 10<sup>6</sup> = 100ms (TYP.)

## OPERATIONAL EXPLANATION (Continued)

### <Release delay time 1>

When power is added on the  $V_{IN}$ , the time from the point that  $V_{IN}$  reaches the release voltage until the reset output pin reaches the release voltage is release delay time 1 ( $t_{DR1}$ ).

Release delay time 1 ( $t_{DR1}$ ) can be set using the equation below.

$$t_{DR1} = Cd \times 10^6$$

Example: When Cd is 0.1 $\mu$ F,  $t_{DR1} = 0.1 \times 10^{-6} \times 10^6 = 100\text{ms}$  (TYP.)

### <Release delay time 2>

Release delay time 2 ( $t_{DR2}$ ) is the duration of the detect state until the watchdog timer restarts when "L  $\rightarrow$  H" signal is not input to the WD pin within the watchdog timeout time.

Release delay time 2 ( $t_{DR2}$ ) can be set using the equation below.

$$t_{DR2} = Cd \times 10^5$$

Example: When Cd is 0.1 $\mu$ F,  $t_{DR2} = 0.1 \times 10^{-6} \times 10^5 = 10\text{ms}$  (TYP.)

### <Detect delay time>

The detect delay time ( $t_{DF}$ ) is the time until the  $V_{IN}$  pin voltage drops to the detect voltage and the reset output pin enters the detect state.

### <MRB pin> \*XC6130 Series

The MRB pin voltage can be input to force the signal of the reset output pin to the detect state.

When the MRB pin voltage input reaches an H $\rightarrow$ L level signal, an H $\rightarrow$ L level signal is output to the reset output pin. After the MRB pin voltage reaches L $\rightarrow$ H level, the reset output pin holds the detect state during release delay time 1 ( $t_{DR1}$ ).

### <EN pin> \*XC6131A Series

If the watchdog function will not be used, the EN pin can be set to L level to forcibly stop only the watchdog function and keep the voltage detector operating. When using the watchdog function, use the EN pin at H level. If the input voltage and EN pin voltage reach L $\rightarrow$ H level, the reset output pin holds the detect state during release delay time 1 ( $t_{DR1}$ ). (Refer to Timing Chart 2, ①)

If the input voltage is higher than the release voltage and the EN pin voltage reaches L $\rightarrow$ H level, the watchdog function recovers. (Refer to Timing Chart 2, ②)

### <ENB Pin> \*XC6131B Series

When the watchdog function is not used, the ENB pin can be set to H level to keep the voltage detector operating and forcibly stop only the watchdog function. To use the watchdog function, use the ENB pin at L level. When the input voltage and ENB pin voltage reach H $\rightarrow$ L level, the reset output pin holds the detect state during release delay time 1 ( $t_{DR1}$ ). (Refer to Timing Chart 3, ①)

When the input voltage is higher than the release voltage and the ENB pin voltage reaches H $\rightarrow$ L level, the watchdog function recovers. (Refer to Timing Chart 3, ②)

## NOTES ON USE

1. Use this IC within the absolute maximum ratings. Risk of deterioration or damage if the absolute maximum ratings are exceeded during temporary or transient voltage drops or voltage jumps.
2. If a resistance is added between the power and the VIN pin, the flowthrough current when the IC operates will cause the VIN pin voltage to drop and the IC may malfunction.
3. When raising the input voltage from the minimum operating voltage or less, if changed suddenly, the release delay time may become short.
4. Sufficiently reinforce the VIN and GND lines, as power noise may cause malfunctioning of the watchdog function and voltage detector. It is recommended that a capacitor be added between VIN and GND.
5. Enter "H" level, or "L" level should be fed to MRB and EN/ENB pin.
6. To ensure stable operation of the watchdog function, be sure to add a capacitor at the Cd pin.  
The release delay time and watchdog timeout time are affected by the accuracy and temperature characteristics of the Cd pin capacitor.
7. If the Cd pin capacitor is unable to discharge to the ground level during recovery after a power interruption, the release delay may become noticeably shorter. Exercise caution.
8. The output voltage at detection is determined by the pull-up resistance connected to RESETB pin.  
Select the resistance based on the following considerations:

$$\text{At detection: } V_{\text{RESETB}} = (V_{\text{pull-Up}}) / (1 + R_{\text{pull}} / R_{\text{ON}})$$

Vpull-Up: Voltage after pull-up

R<sub>ON</sub><sup>(1)</sup>: ON resistance of N-ch driver (calculated from  $V_{\text{RESETB}} / I_{\text{RBOUT1}}$  in electrical characteristics)<sup>(3)</sup>

Example calculation:

When  $V_{\text{IN}} = 2.0\text{V}$ <sup>(2)</sup>,  $R_{\text{ON}} = 0.3 / 4.9 \times 10^{-3} \approx 61.2\Omega$  (MAX. ). If you wish to make the VRESETB voltage at detection 0.1V or lower with Vpull-Up=3.0V,

$$R_{\text{pull}} = (V_{\text{pull-Up}} / V_{\text{RESETB}} - 1) \times R_{\text{ON}} = (3 / 0.1 - 1) \times 61.2 \approx 1.8\text{k}\Omega,$$

and thus to make the output voltage at detection 0.1V or less under the above conditions, the pull-up resistance must be 1.8kΩ or higher.

<sup>(1)</sup> The smaller VIN is, the larger RON becomes.

<sup>(2)</sup> When selecting VIN, calculate using the lowest value of the input voltage range you will use.

<sup>(3)</sup> I<sub>RBOUT1</sub> specified in the electrical characteristics is the value at Ta=25°C. I<sub>RBOUT1</sub> varies depending on the ambient temperature.

To select the pull-up resistance taking ambient temperature into account, please calculate I<sub>RBOUT</sub> with the MIN. value of the ambient temperature range of -40°C ≤ Ta ≤ 125°C.

$$\text{At release: } V_{\text{RESETB}} = (V_{\text{pull-Up}}) / (1 + R_{\text{pull}} / R_{\text{OFF}})$$

Vpull-Up: Voltage after pull-up

R<sub>OFF</sub>: Resistance value 60MΩ (MIN. )

when N-ch driver is OFF (calculated from  $V_{\text{RESETB}} / I_{\text{LEAK}}$  in electrical characteristics)

Calculation example:

If you wish to make V<sub>RESETB</sub> 5.99V or higher with Vpull-Up=6.0V

$$R_{\text{pull}} = (V_{\text{pull-Up}} / V_{\text{RESETB}} - 1) \times R_{\text{OFF}} = (6 / 5.99 - 1) \times 60 \times 10^9 \approx 100\text{k}\Omega,$$

and thus to make the output voltage 5.99V or higher at release under the above conditions, the pull-up resistance must be 100kΩ or less.

9. We place importance on improving our products and increasing reliability. However, please design safety into the device and system, including fail-safe design and post-aging treatment.

## PACKAGING INFORMATION

### ●SOT-26 (unit: mm)

### ●SOT-26 Reference Pattern Layout (unit: mm)

## ■ PACKAGING INFORMATION (Continued)

### ● SOT-26 Power Dissipation (Topmax+125°C)

Power dissipation data for the SOT-26 is shown in this page.  
The value of power dissipation varies with the mount board conditions.  
Please use this data as the reference data taken in the following condition.

#### 1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)  
Copper (Cu) traces occupy 50% of the board area  
In top and back faces  
(Board of SOT-26 is used)
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6mm
- Through-hole 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient Temperature

Board Mount (T<sub>jmax</sub>=125°C)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	600	166.67
85	240

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
