CNC series

Soft termination (Low resistance type)

Type: CNC5/3216 [1206 inch], CNC6/3225 [1210 inch]

SERIES OVERVIEW

TDK multilayer ceramic chip capacitor low resistance type soft termination commercial grade CNC series is a product which conductive resin layers are included in terminations. It's different from conventional soft termination C series which overall surface of termination is covered with the resin layers, lower electric resistance has been realized because the current can pass through low resistive layers by covering only soldering positions with the resin layers.

FEATURES

- Lower electric resistance has been realized because the current can pass through low resistive layers by covering only soldering positions with conductive resin layers.
- Therefore, this product can contribute to reliability improvement by promotion of replacement to soft termination type.

APPLICATIONS

- Fail-safe design in battery line.
- Prevention of ceramic body cracks by board bending.

SHAPE & DIMENSIONS

L	Body length
W	Body width
T	Body height
B	Terminal width
G	Terminal spacing

ELECTRODE STRUCTURE DRAWING

Soft termination
(Conventional type)

Termination consists of 4 layers including conductive resin layer.

Soft termination
(Low resistance type)

The conductive resin layer is only applied at the soldering positions.
