# SPC5 Studio IDE

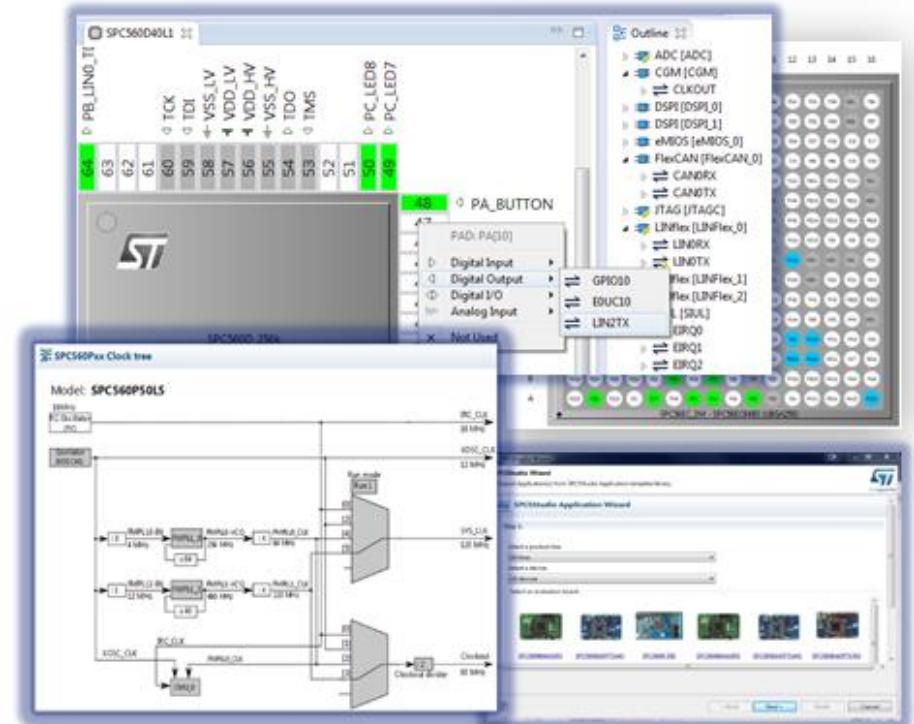

# SPC5 Studio

8

- An integrated development environment
  - Toolchain, debugger, code generation and code analysis, performance tool
  - Visual applications: ClockTree, PinMap wizard, MCU selection
  - Full MISRA 2012 compliant low level drivers
- Visual mapping of customer use cases on top MCU packages portfolio
  - Simplified visual view of packages for package comparison
  - Easy to migrate customer use cases from one package to another
  - Easy to swap between package configuration
- SPC5Studio: container and contents
  - Tool based on Eclipse
  - Extended list of drivers
  - User community feedback via ST External Forum Service

- Availability
  - Currently released version: 5.8.0
  - Free of charge
- See more at <http://www.st.com/spc5studio>

# SPC5 Studio Core Features

9

- SPC5Studio implements a set of graphical MCU configuration tools
  - Applications are managed as components
  - Each component is defined by a set of properties
  - Each component is able to generate code, based on components properties configuration
- Application development assist wizards
  - MCU selection & IP activation
    - Used to enable/disable and configure a single core e/o peripheral IP
  - PinMap
    - Graphics pin configurator with pads association and **configuration consistency check** as well as code generation
  - ClockTree
    - Graphics clock tree configurator with consistency check and configuration code generation
  - Power Consumption Tool
    - Graphics tool for power consumption estimation and analysis
- Full interoperability and consistency check across configuration tools and component configurators
- Multi compiler support natively embedded
  - ➔ Preferred Compiler:
  - ➔ Basic Compiler:
  - ➔ Other Compilers:
- Debugging supported by

ST Free GCC

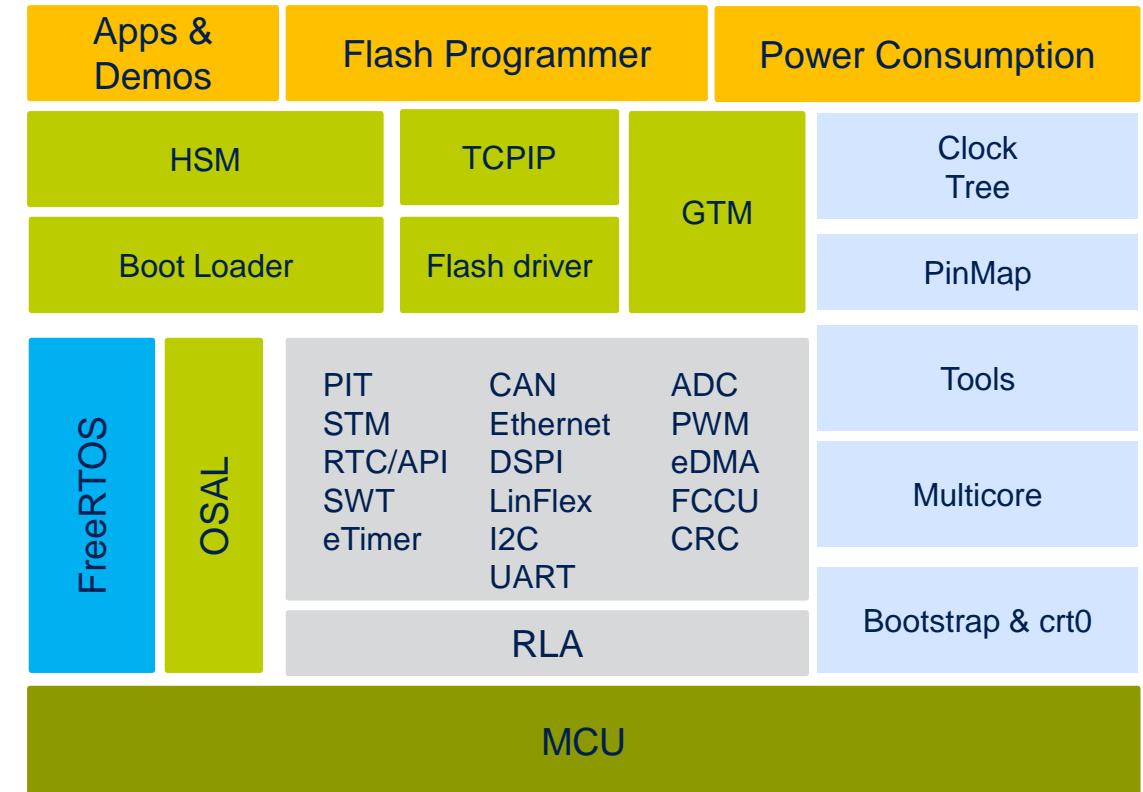

# SPC5 Studio Contents

10

- Integrated development environment
- Visual applications:
  - ClockTree,
  - PinMap wizard,
  - MCU selection,
  - Power Consumption Tool
- Additional software packages:
  - FreeRTOS
  - TCP/IP
  - Bootloader
  - Flash and EEPROM drivers
- Platform Header files
- Multiple toolchain support
- Debugger integration
- Code generation and code analysis
- Driver API documentation
- Full MISRA 2012 compliant

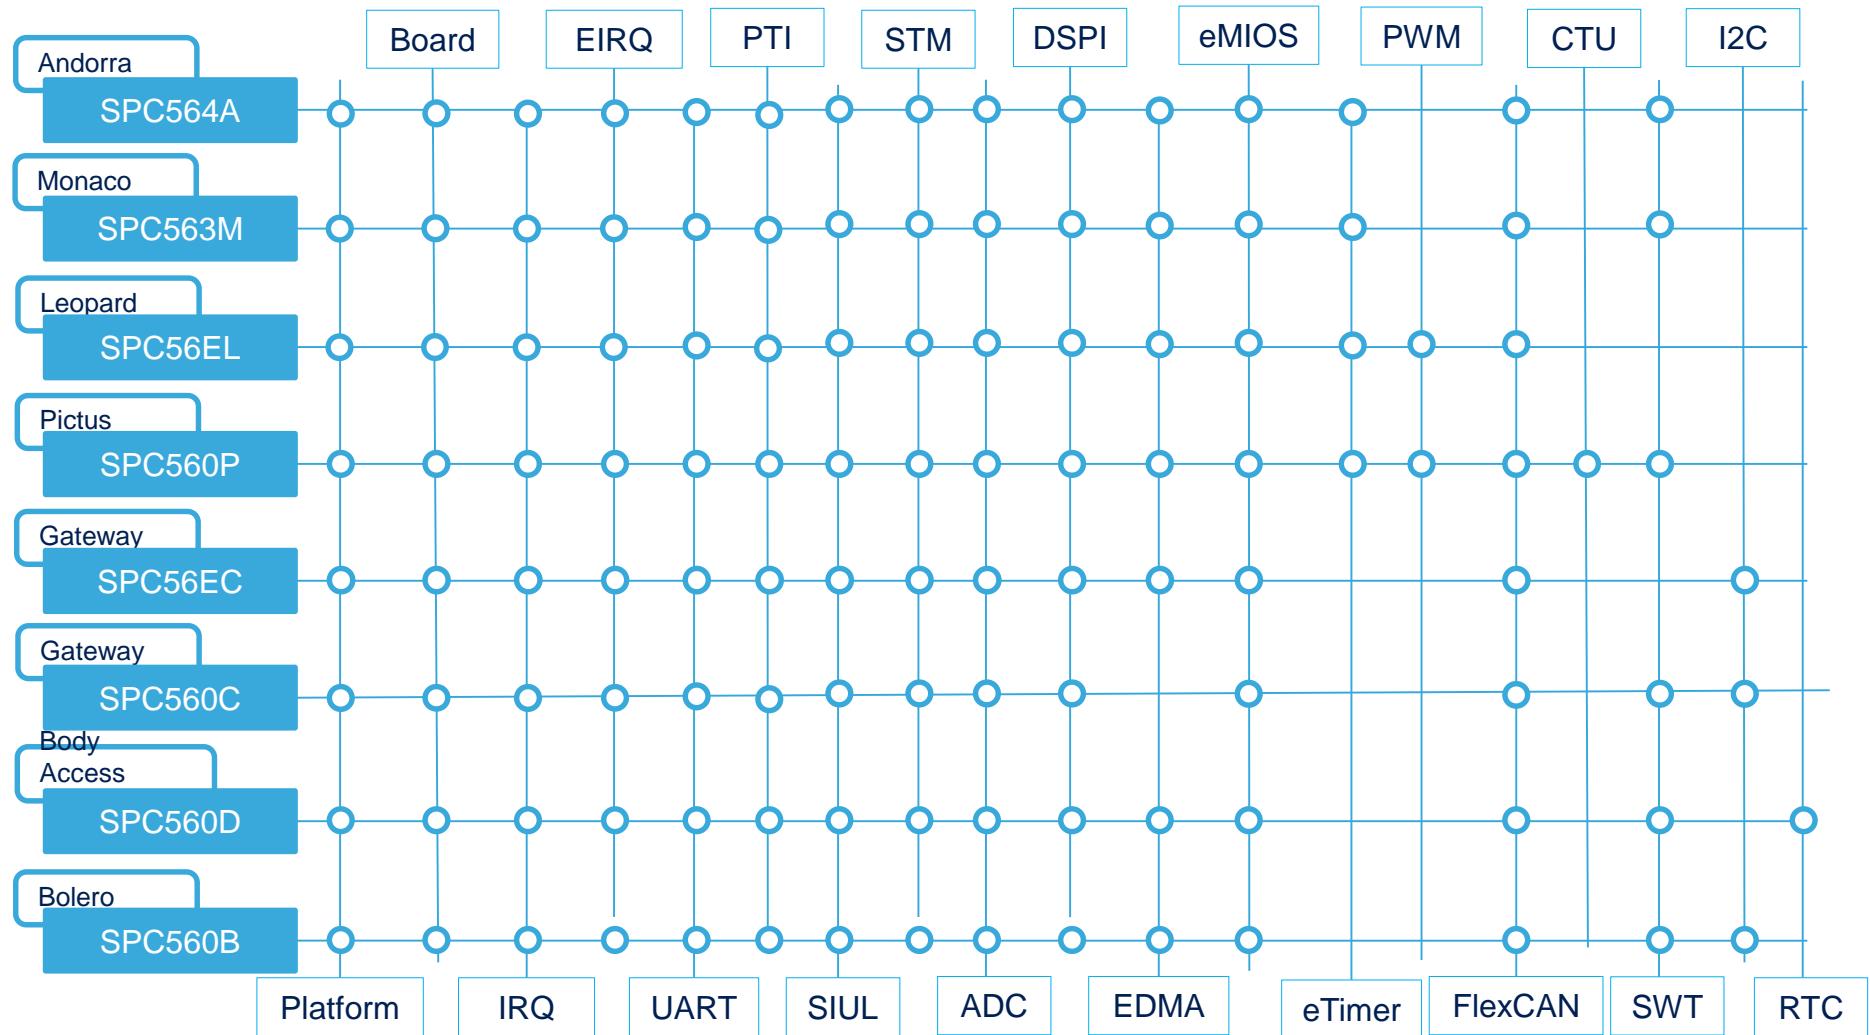

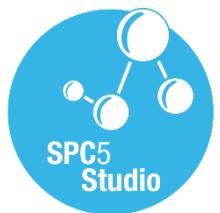

- GTM
  - Full API for GTM submodules
  - MCS toolchain integration
  - Specific demos and applications

# SPC56 Family Support

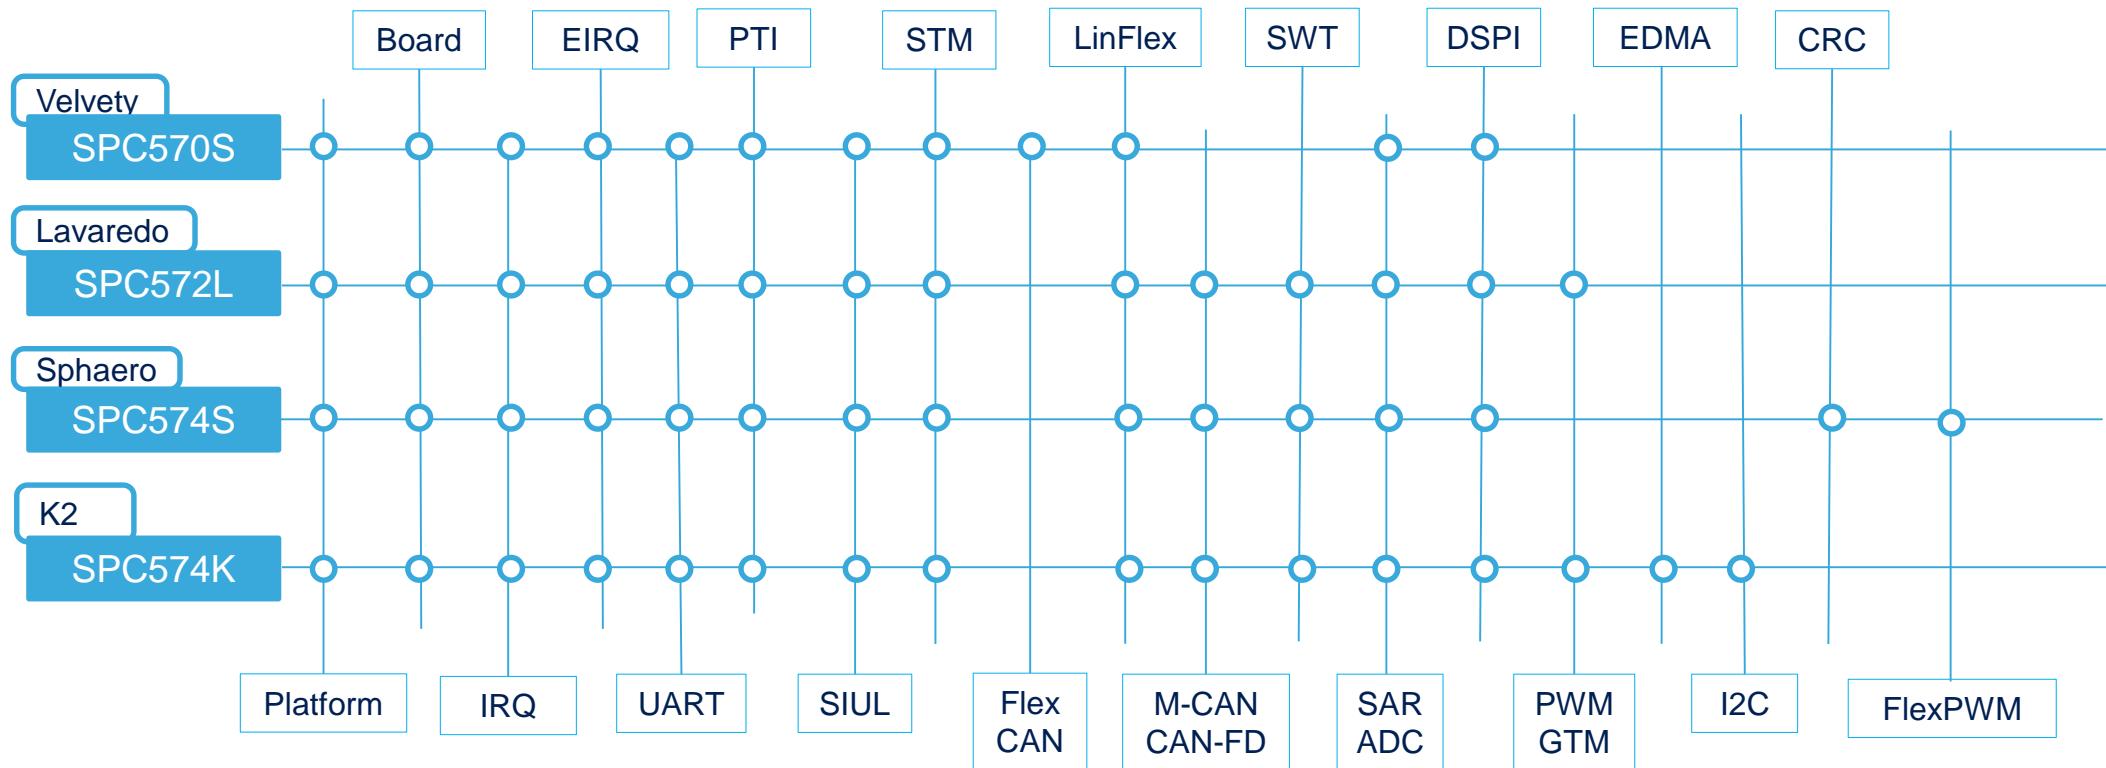

11

# SPC57 Family Support

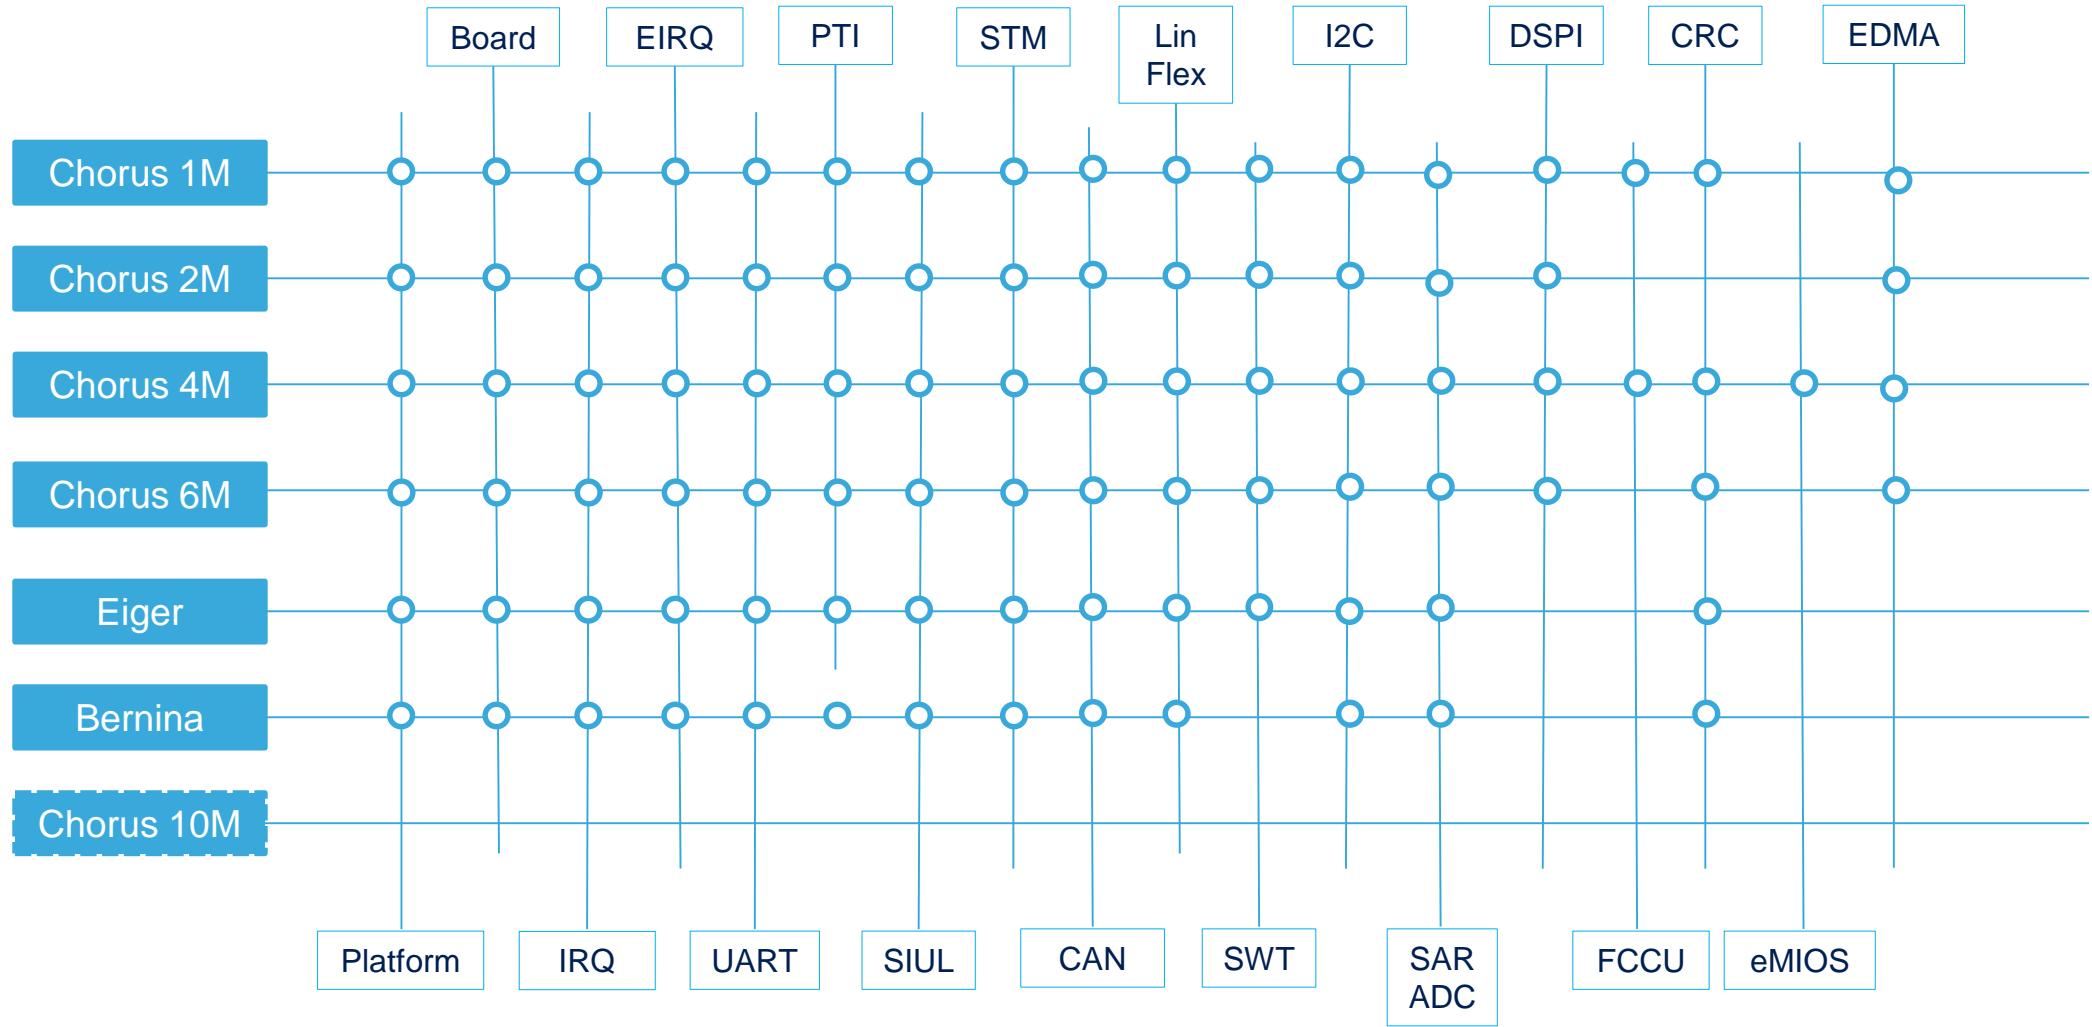

12

# SPC58 Family Support

13

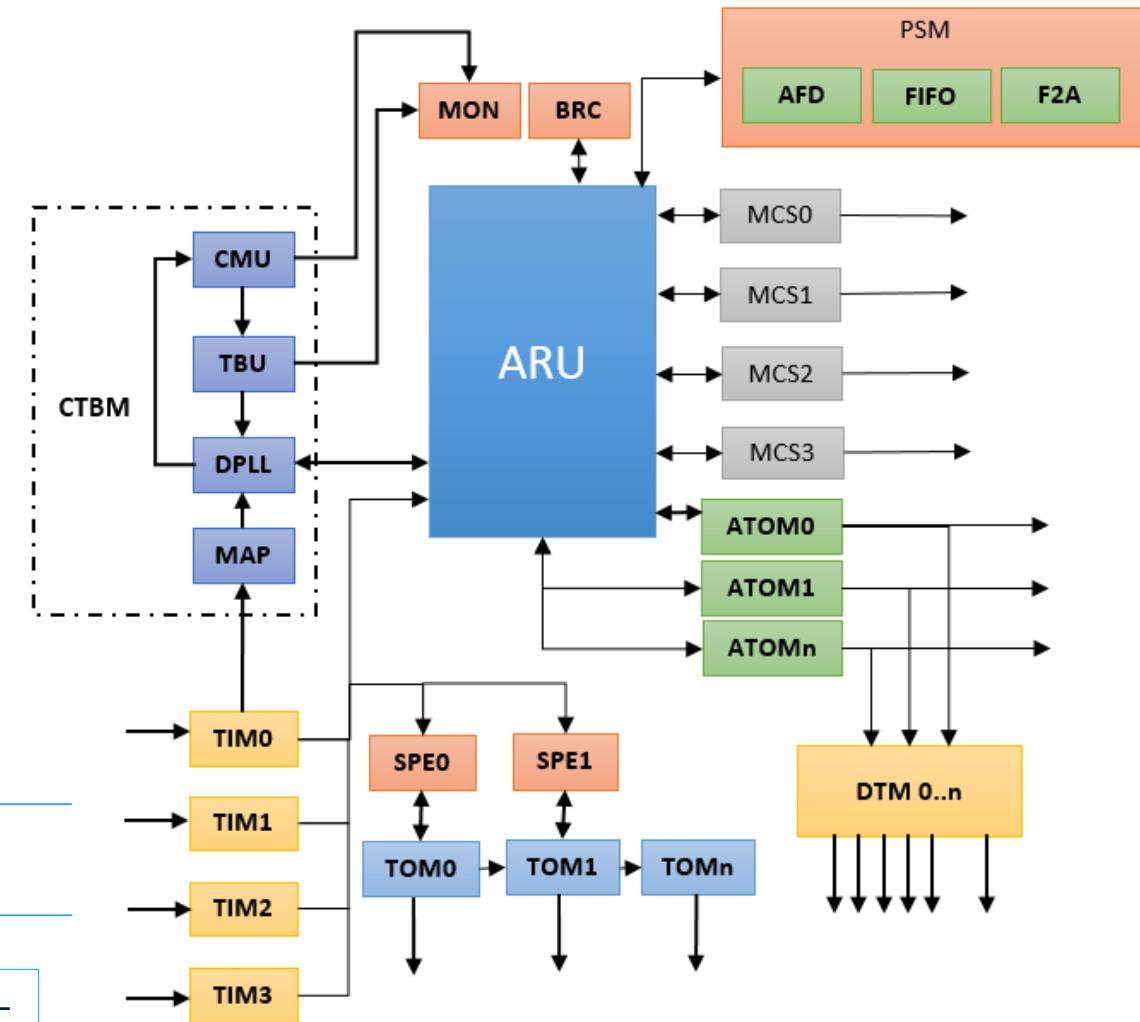

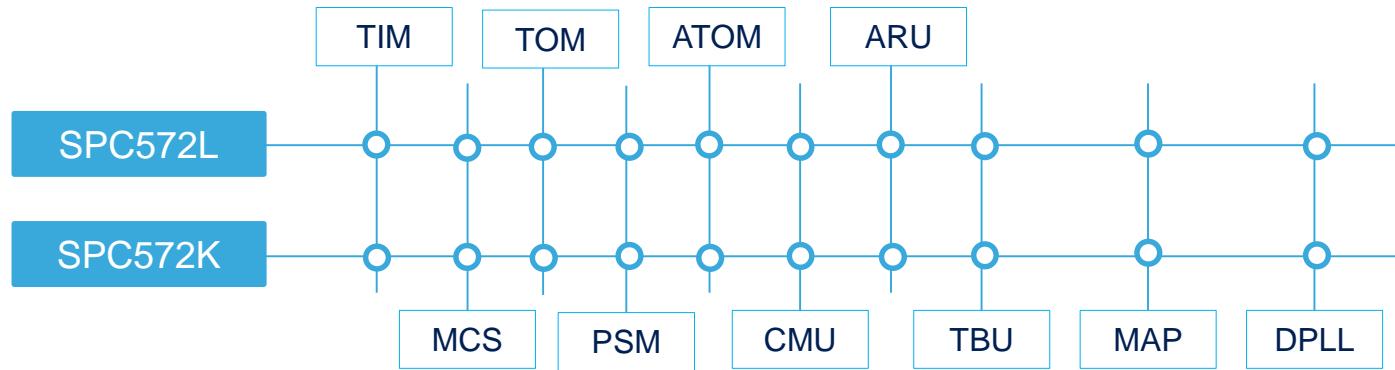

# GTM Component

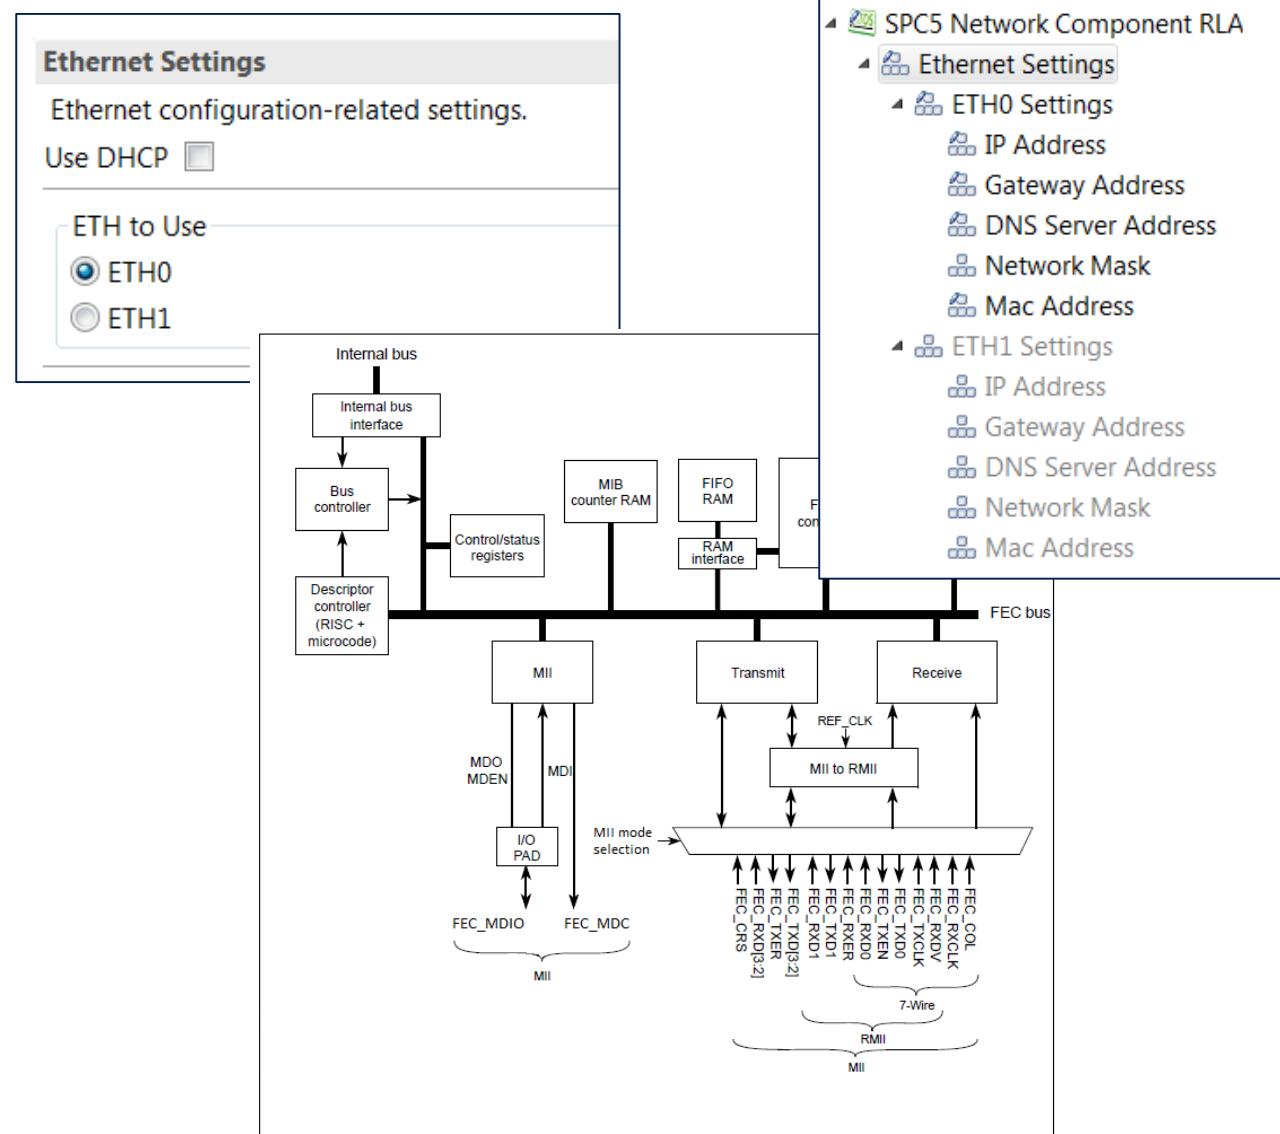

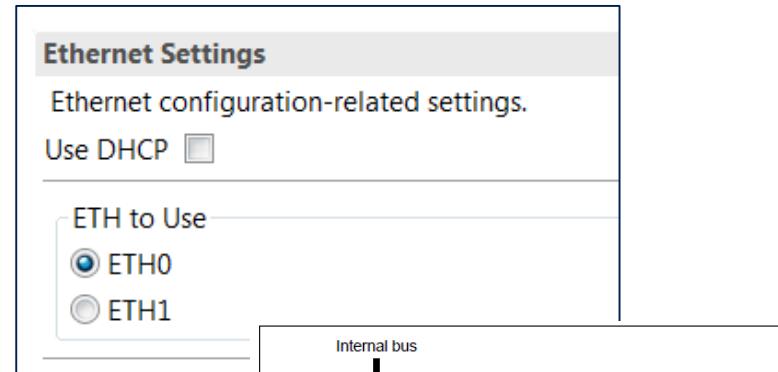

14

- New GTM Component
- Functional level GTM API
- MCS compiler integrated in SPC5Studio
- PWM driver on top of GTM
- Several demos already available
  - ATOM, TOM, MCS, PSM, TIM, ARU
- Available for Lavaredo and K2
  - (SPC58) Eiger and Bernina planned

# Network Component

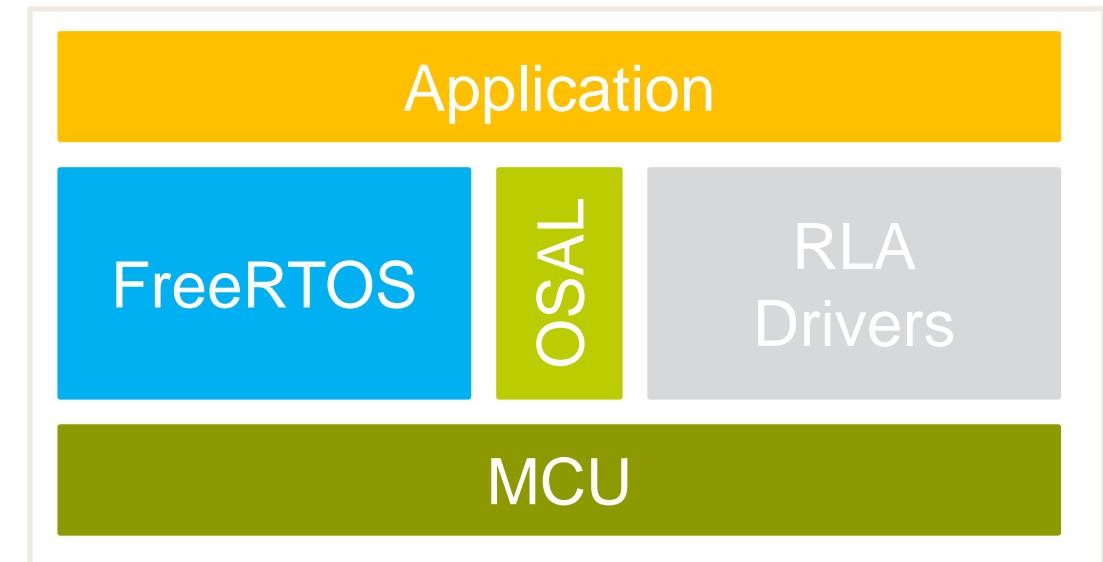

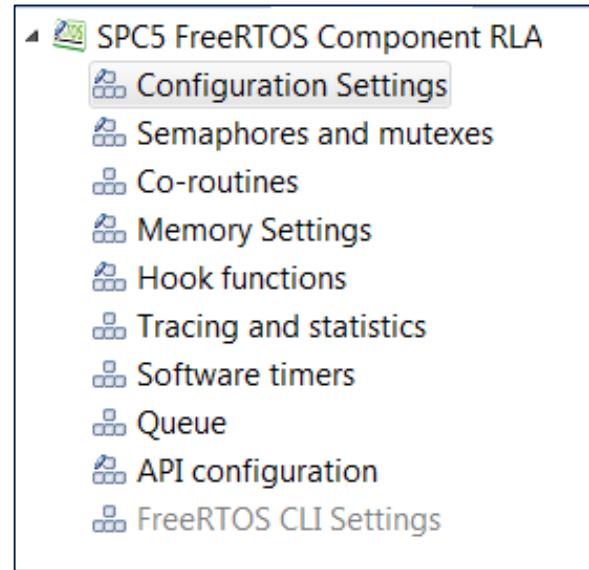

- New Network Component
- Implements Ethernet drivers
- Available for:
  - Chorus2M
  - Chorus4M
  - Chorus6M
  - K2
  - Bolero3M
- Demos available
- Graphical User Interface for configuration

# FreeRTOS Component

- New FreeRTOS Component
- Full RTOS functionalities
- Provided for all supported platforms
- Graphical configuration User Interface
- Drivers awareness
- Several demos available

**FreeRTOS** is supported for all families and all devices

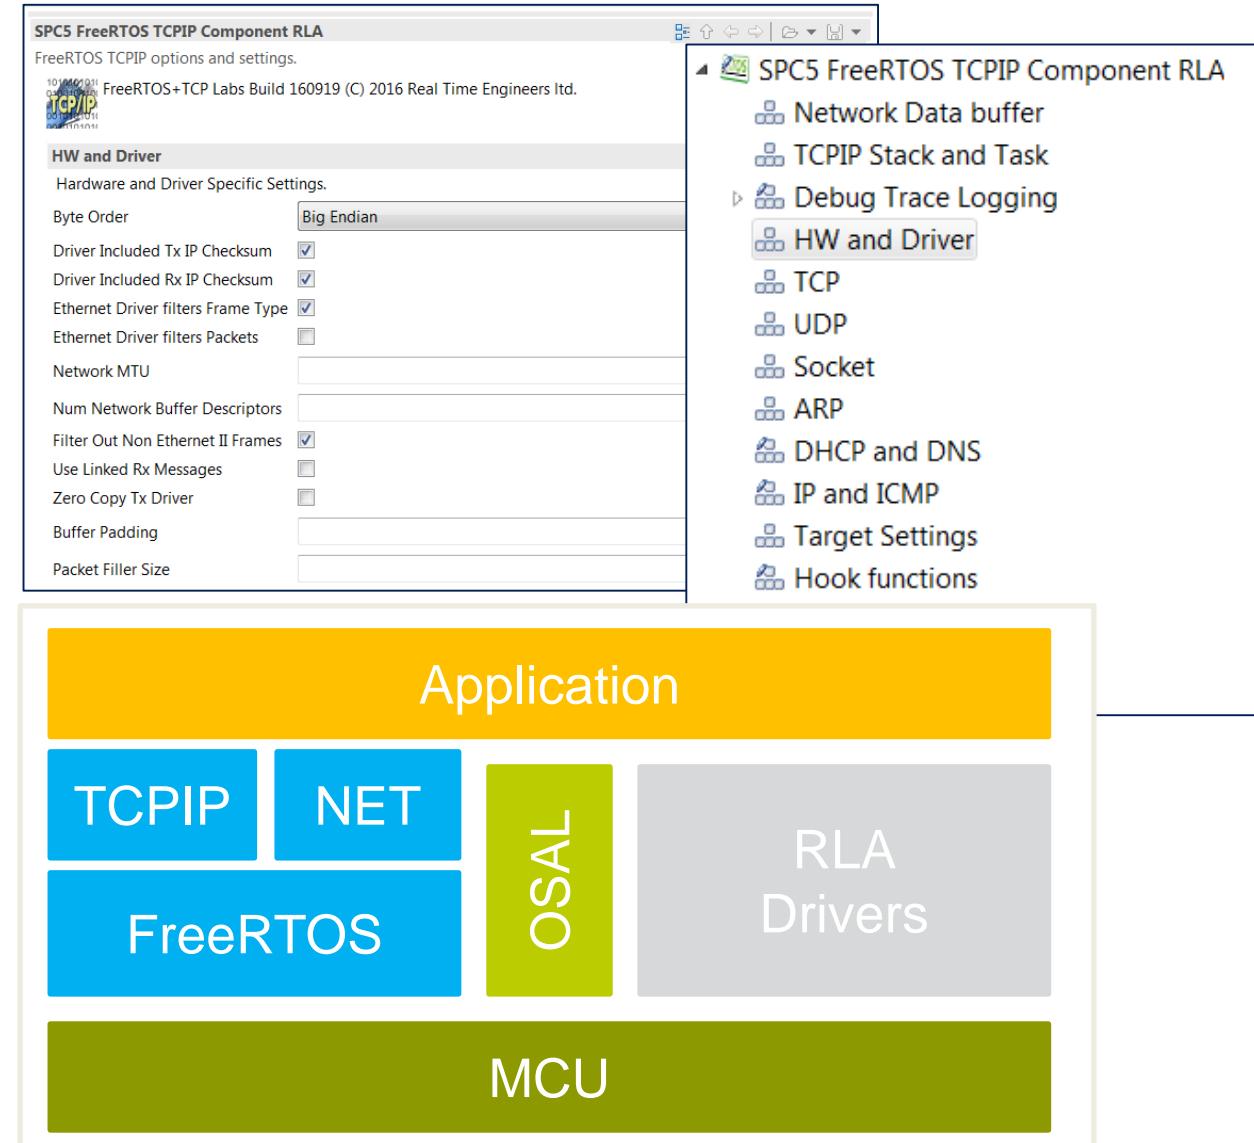

# TCPIP Component

17

- New TCP/IP Component
- Full network protocol functions
- Support TCP, UDP, ARP
- BSD-like interface
- Graphical User Interface
- Demos available

# Power Consumption Tool

40

\*SPC58ECxx power consumption

**Consumption settings**  
Power consumption settings

**General**

Specific model	SPC58EC80E3
Chip mode	DRUN
SYS_CLK	120 MHz
HSM_CLK	60 MHz

**Input**

R(theta JA)	28.0 °C/W
Ambient temperature	25.0 °C
V(DD_HV)	5.0 V
V(DD_LV)	1.2 V
Ballast	External
P(I/O)	0.0 mW

**Master**

Master blocks

- Core 0 [I(DD LV): 11.58 mA, I(DD HV): 0.0 mA]
- Core 2 [I(DD LV): 11.58 mA, I(DD HV): 0.0 mA]
- HSM [I(DD LV): 0.0 mA, I(DD HV): 0.0 mA]

**Peripherals**

Peripherals List

- CAN [I(DD LV): 0.9 mA, I(DD HV): 0.5 mA]
- SARADC [I(DD LV): 1.6 mA, I(DD HV): 0.0 mA]
- DSPI [I(DD LV): 0.8 mA, I(DD HV): 0.9 mA]
- LIN [I(DD LV): 0.7 mA, I(DD HV): 0.5 mA]

**Description**

Profile description

Clock tree in default config  
PLL0 freq = 180 MHz  
The SYSCLK is driven by PLL1  
IPs clock enabled but not initialized  
Code executed from flash

**Computed**

Junction Temp.	32.11 °C
I(DD LV)	99.02 mA
I(HV IO MAIN)	22.8 mA
I(HV ADC)	3.0 mA
I(DD Leakage)	4.83 mA
P(Micro)	253.61 mW
P(Ballast)	394.58 mW

**Core 2**

SYS_CLK	120 MHz	ICache	<input type="checkbox"/>
Pattern	typical	Fetch Mode	Flash
I(DD LV)	11.5766 mA	I(DD HV IO MAIN)	2.0 mA

**CAN**

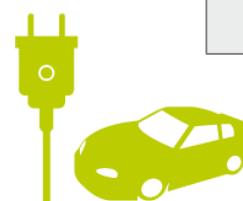

Sysclk freq. 180 MHz, Rate 500K/s

CAN_CLK	180 MHz	Rate	500 K/s
I(DD LV)	0.9 mA	I(DD HV IO MAIN)	0.5 mA

## New Visual Power Consumption Tool

- Visual tool for Power Consumption estimation
- Provides a way to evaluate consumption of peripherals under various configurations
- Clock frequency setting to evaluate power consumption constraints
- Low power mode supported

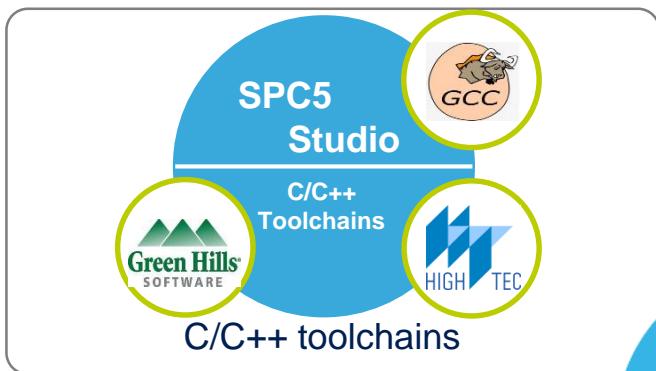

\*Chorus 4M available

SPC5  
Studio

# A Complete Offering

In collaboration with

# HighTec Free Compiler License Application Form

20

- Installation plugin of HighTec Free Entry toolchain from  
<http://hightec.spc5studio.com>

- 1 year free license from HighTec website  
<http://register.hightec-rt.com/st/spc5x>

- Fill all information (including PC MAC address)
- Click **Generate License File**
- Receive **license.lic** file by email
- Copy **license.lic** file into **C:\SPC5Studio\licenses**
- Add the Environment Variable (User Side):  
**RLM\_LICENSE=c:\SPC5Studio\licenses**

The screenshot shows a web browser window with the URL <http://register.hightec-rt.com/st/spc5x/index.php>. The page title is "HighTec Free Power Architecture™ Entry Tool Chain". It describes the toolchain as the easiest way to start with a C/C++ compiler for ST PowerPC based microcontrollers (SPC5x product lines), version 4.9.3.0-stm-1.1 (including support for the newest SPC57 and SPC58 devices). On the right, there is a "HIGHTEC" logo.

**Instructions:**

1. Please fill out the form to the right
2. You will be sent an e-mail, which contains your license file and the download link
3. Download the installation package
4. Unzip the installation package and start "Setup.exe" to install the toolchain
5. Copy the license file to the folder "C:\HighTec\licenses"
6. Read the "Getting Started" manual for additional information

**Getting Started**

To get examples for your SPC derivate, please select it here:

**Need technical assistance or training?**

Contact support

**End User License and Maintenance Agreement:**  
Upon using the Free Power Architecture Entry Tool Chain you agree to HighTec's [EULA](#).

# SPC5 SW Product

## MCAL / Security / Safety

# SW Product Offer

23

# Relationship with 3rd Parties for SW Product

24

- ST has a very strong relationship 3rd parties for AUTOSAR, Safety and Security
  - Periodic management review for delivery plan alignment
  - Periodic technical meeting for technology roadmap review
  - Reciprocal access to internal and confidential contents/information
  - Shared bug tracking system
  - ST customer support engineer assigned to 3rd parties for ticket analysis
  - Availability in ST of the 3rd parties environment for a quick analysis of the customer defects

CETIC

KPIT

ETAS

VECTOR >

ARGUS  
CYBER SECURITY

escrypt  
Embedded Security by ETAS

ARC CORE

The logo for Elektrobit, featuring a green stylized 'EB' monogram.

Elektrobit

- MCAL Configuration

- The EB TRESOS Studio (\*) configuration tool is used to develop the MCAL
- ST delivers the MCAL with and without signature
  - Customer using the EB TRESOS Studio Full shall use the version without signature
  - Customer not using the EB TRESOS Studio shall use the version with signature
  - ST delivers the EB TRESOS Studio Basic for the configuration of the MCAL before the integration with BSW form any of the SW vendor (Vector, ETAS, ArcCore, KPIT, ....)
  - ST supports the customer in the integration activity
  - BSWMD files are delivered for easy integration with BSW

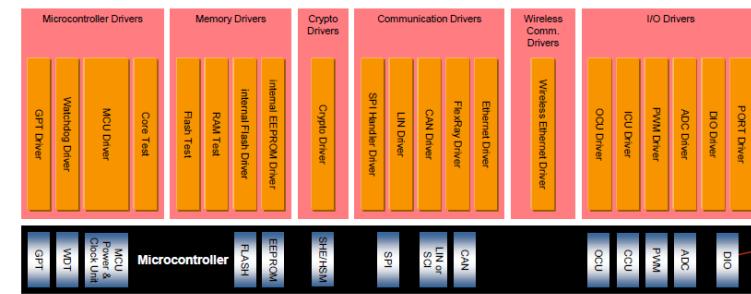

- Compiler

- Starting with the first BETA release the MCAL is tested with the latest version of 3 compilers (\*):

- HIGHTEC (Preferred Compiler)
- Green Hills
- Wind River – DIAB

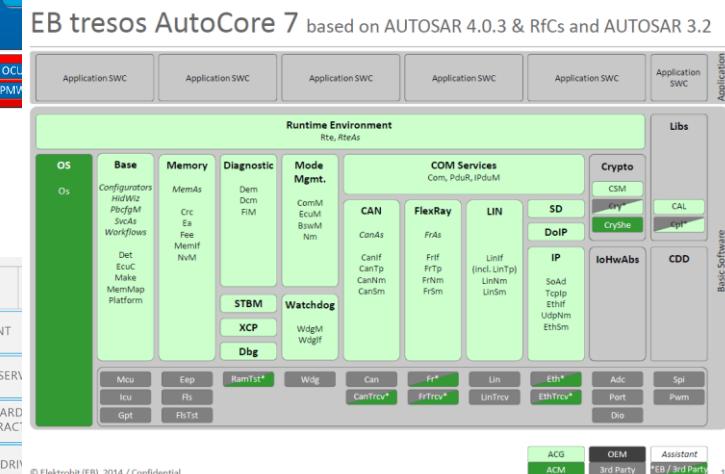

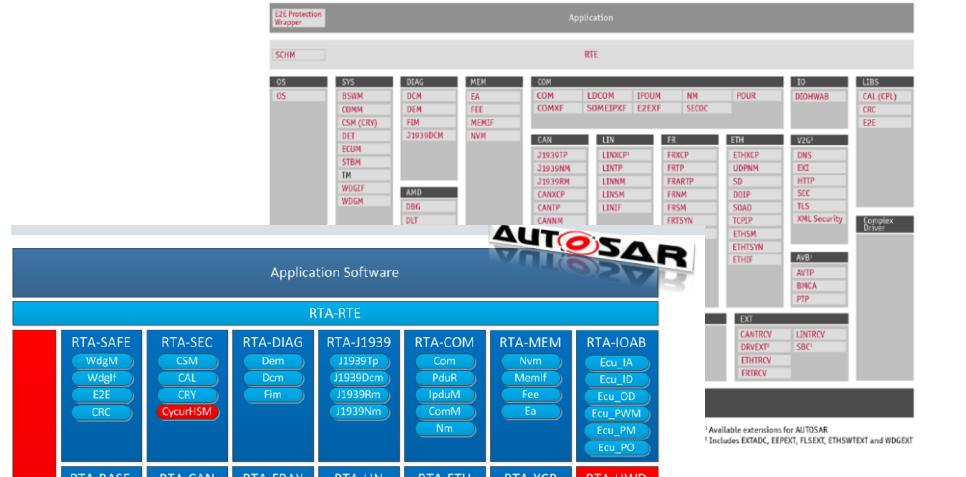

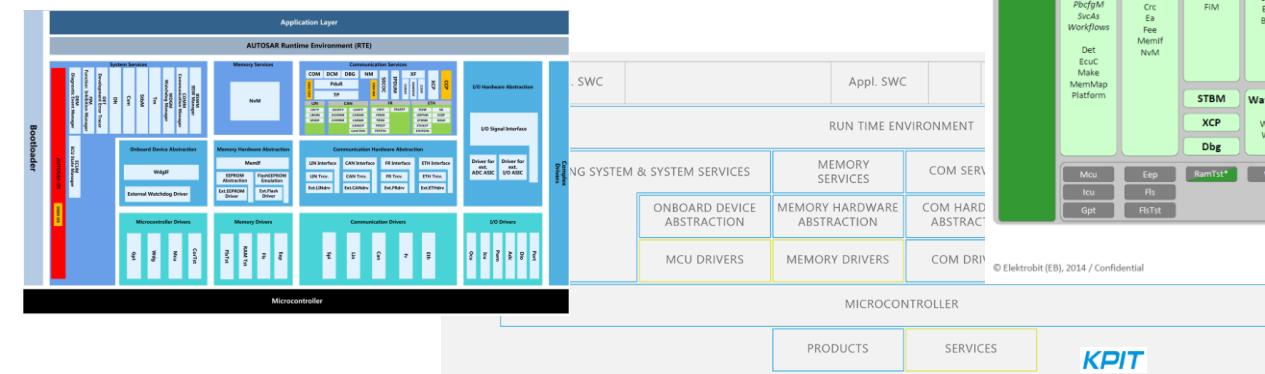

Elektrobit

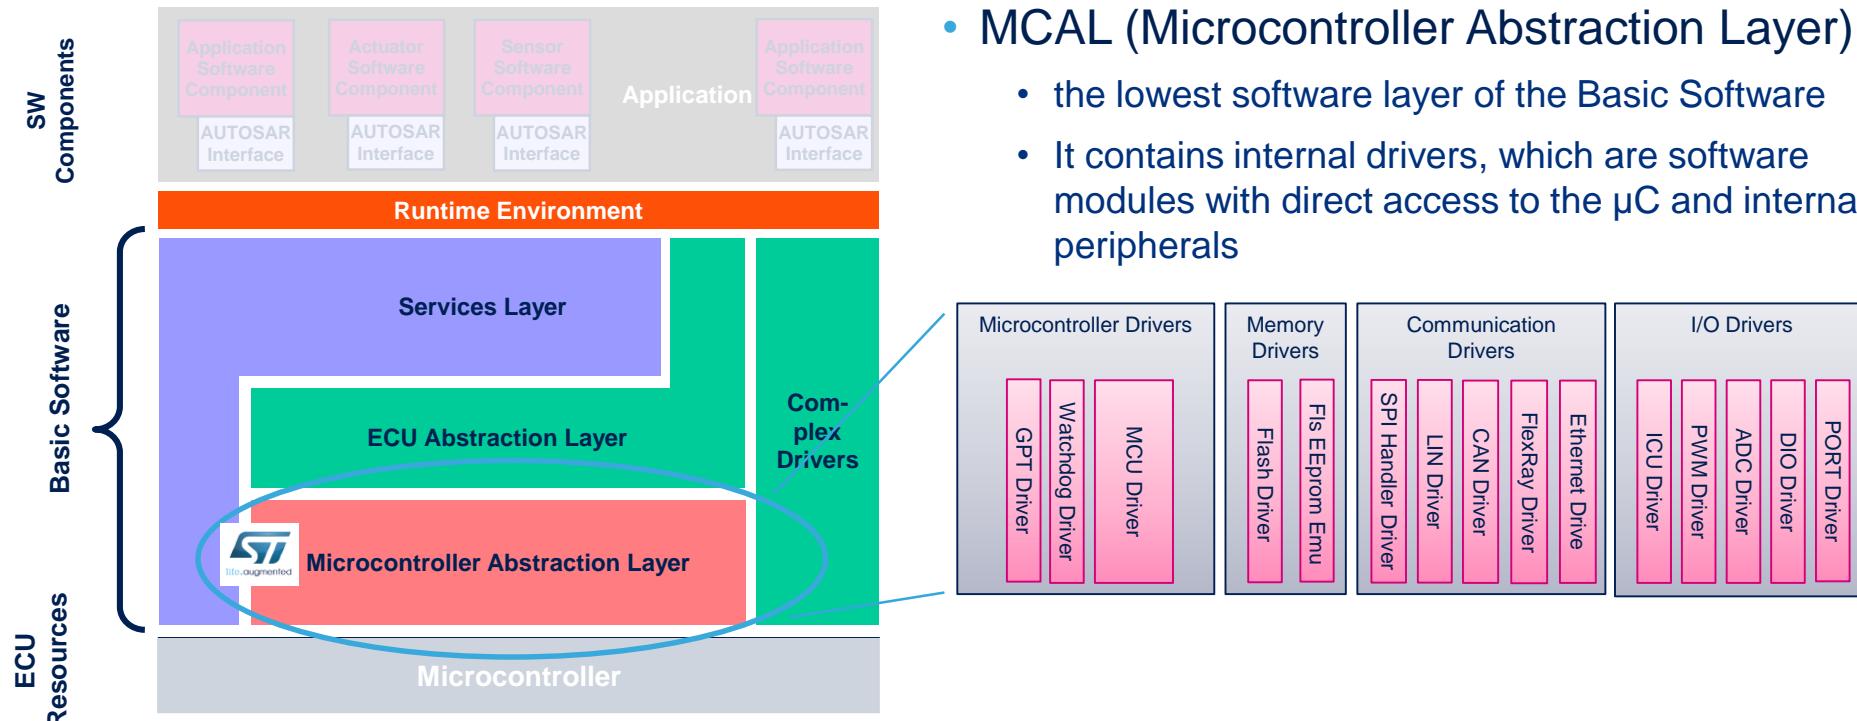

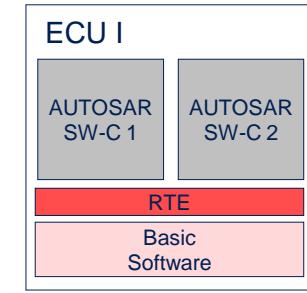

# AUTOSAR BSW from 3rd Parties

26

- Vector, EB, ETAS, ARCCORE, KPIt and iSOFT deliver BSW validated with ST MCAL
- Joint integration plan review
- Sharing of defect database
- Availability in ST of the 3<sup>rd</sup> parties development environment to quick reproduce and fix issues during the Acceptance Testing phase

- Basic Software is based on standard
  - Run-Time Environment (RTE) for separation of system into its ECU (plus common infrastructure)

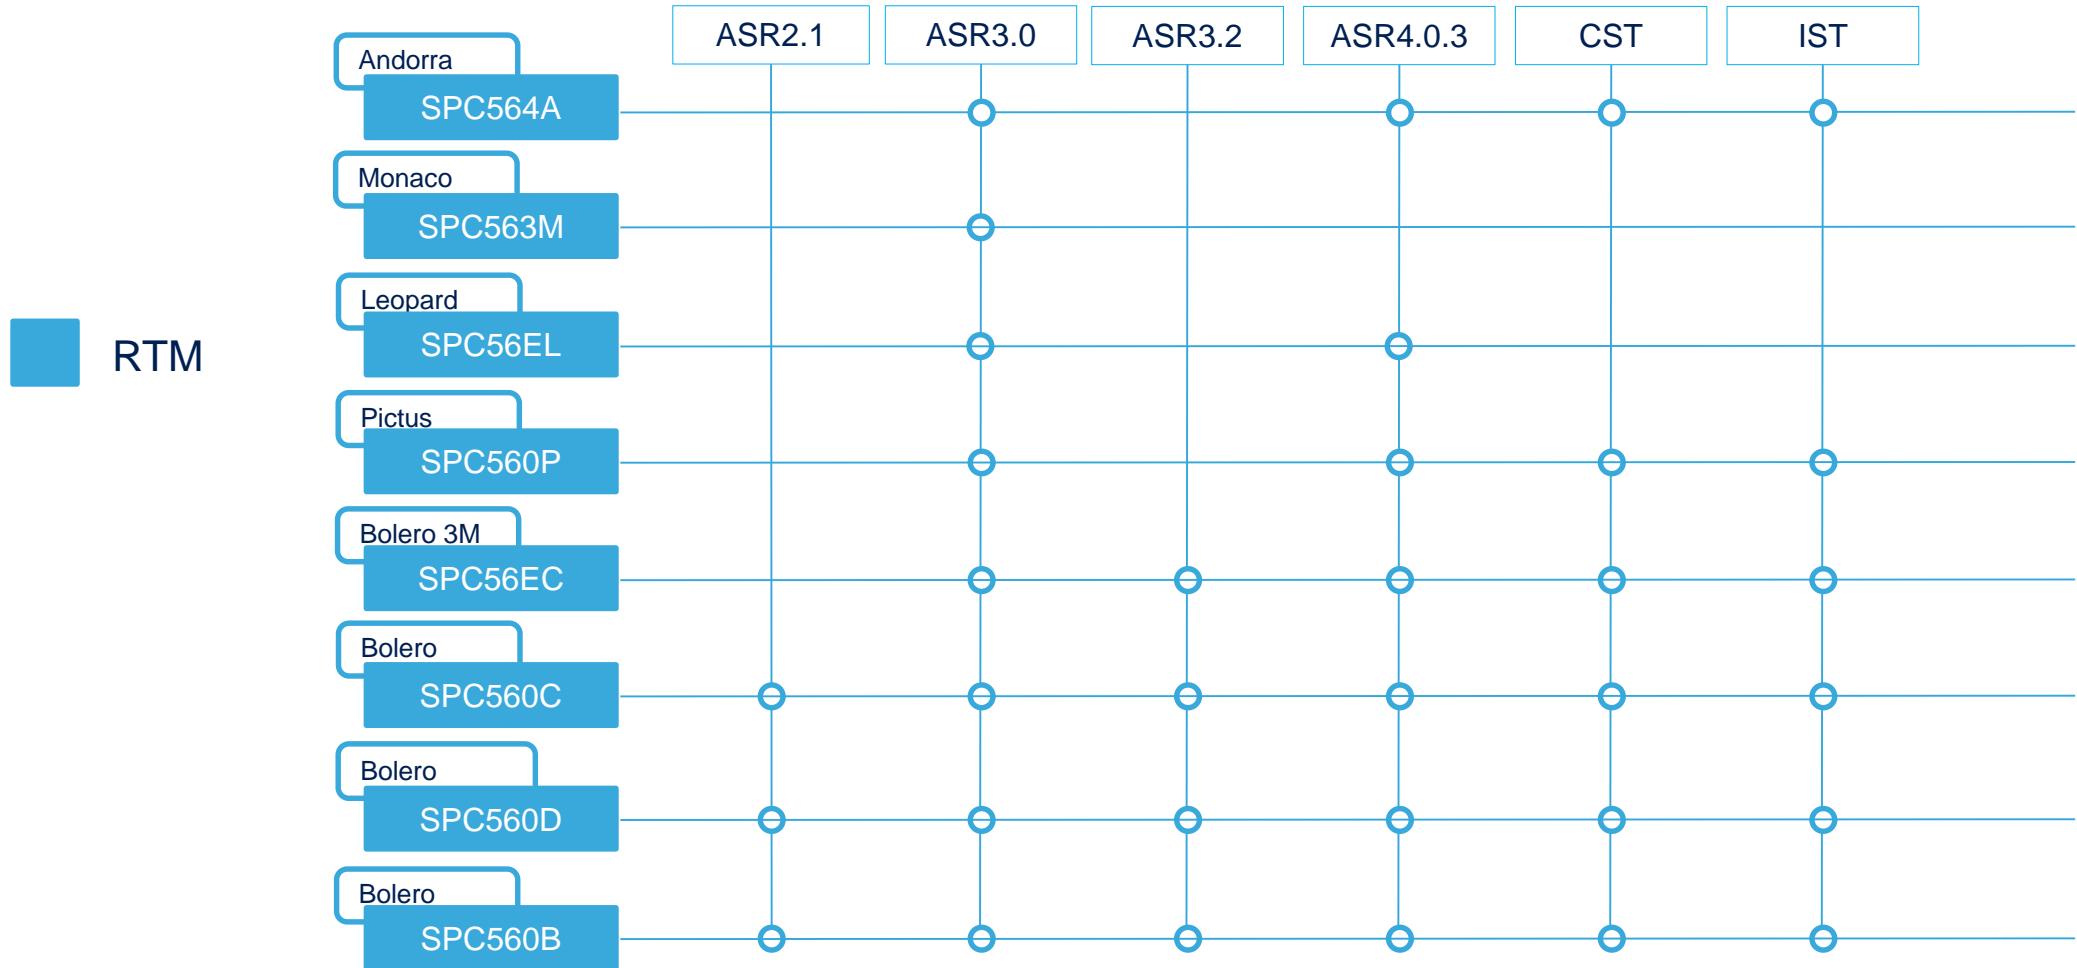

## • MCAL (Microcontroller Abstraction Layer)

- the lowest software layer of the Basic Software
- It contains internal drivers, which are software modules with direct access to the µC and internal peripherals

# SPC56 SW Support

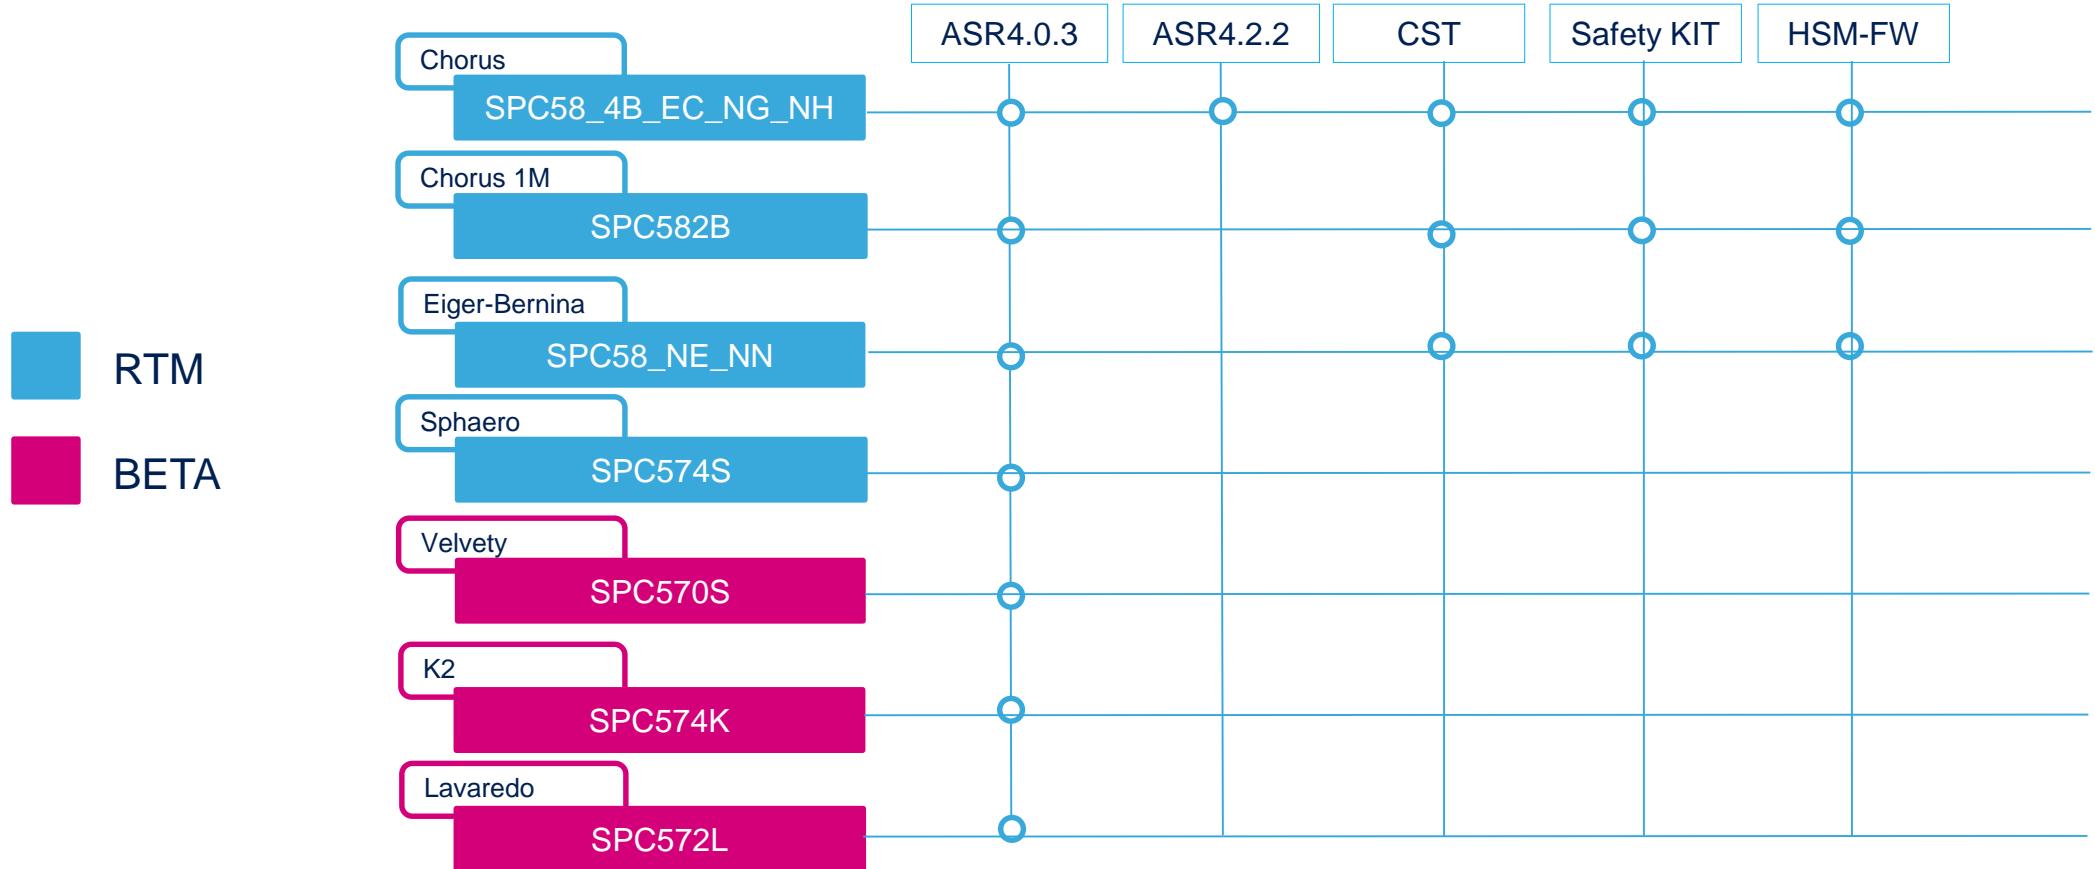

28

- The SPC58xx MCALs are built on a very solid “code based” inherited from the SPC56xx MCAL already delivered for several customer project.
  - More than 200 projects (ST + FSL) in 10 years (ASR2.1, ASR3.x, ASR 4.0.3)
- The MCAL is designed and implemented taking in consideration the concept of the IP-Reuse
  - The defects reported in one platform (e.g. Eiger) for a give IP (e.g. M-CAN) are analyzed to evaluate the impact in another platform (e.g. Chorus).
  - If the defect impact the other platform the ticket of the first platform is cloned for all the other affected platform
  - The code is consistently updated through all the platform shorting the time to have mature SW (RTM)
- The SPC58xx MCAL could be applied for the “**proven-in-use**” safety criteria (ISO 26262- Part8- Chapter14).

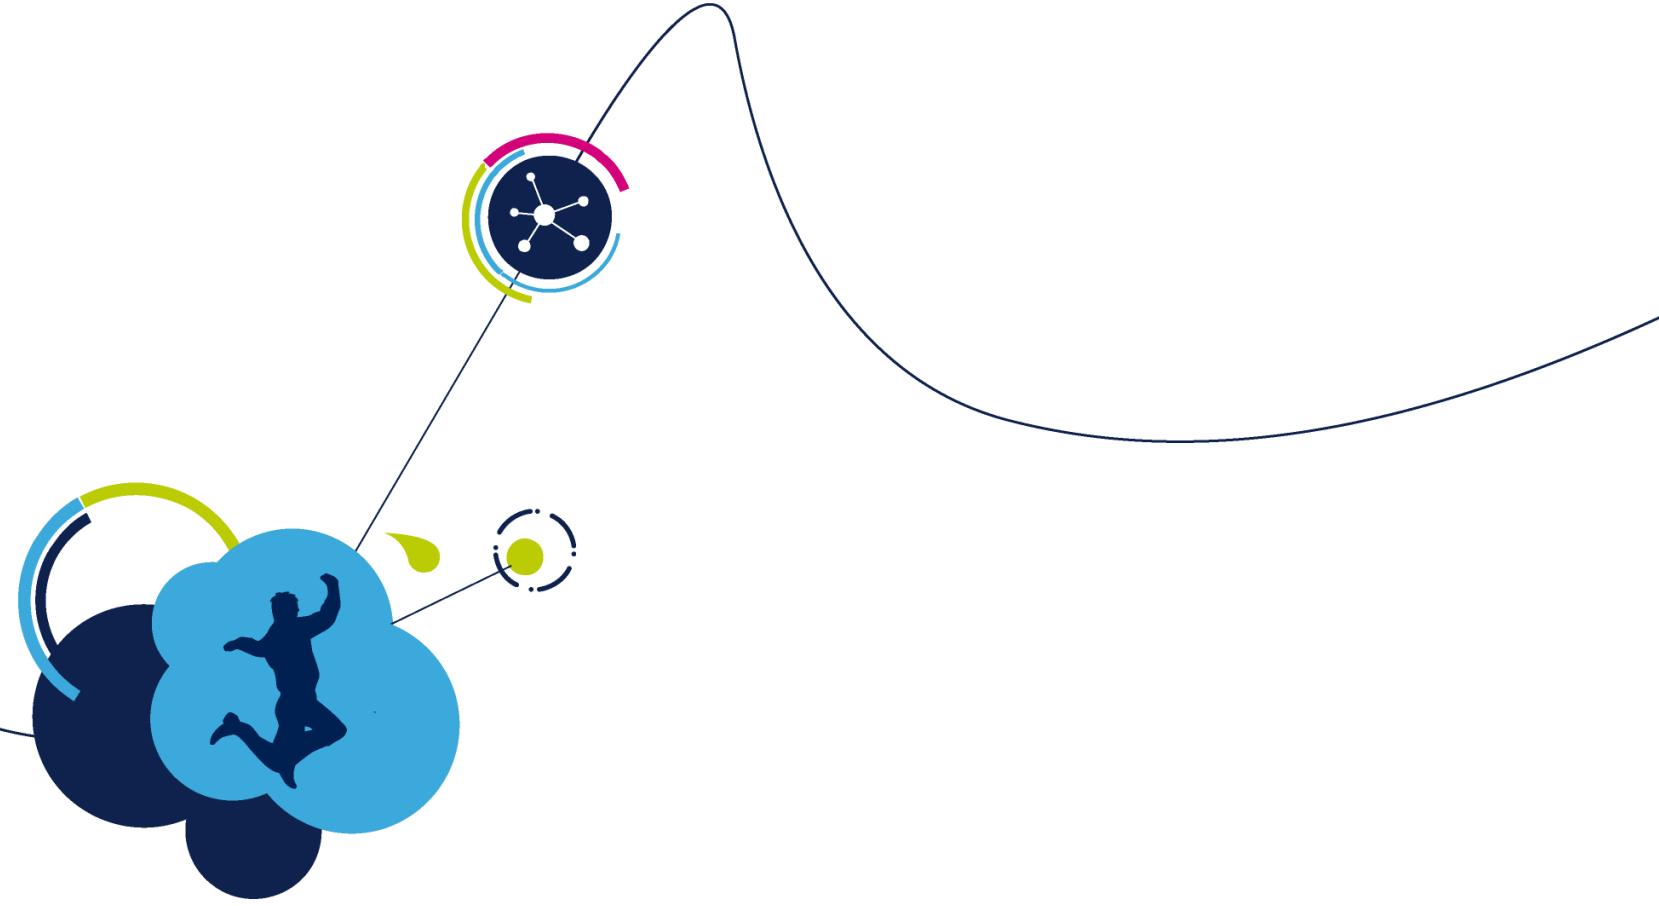

# SPC57 and SPC58 SW Support

30

- The **Core Self Test** is a test program that implements a software-based self-test (SBST) that is able to check whether a fault (stack-at) is affecting or not the processor core during the normal operational life
  - The set of tests contains a subset runnable at run-time (non-intrusive test) that could be scheduled by an OS task for run-time test
  - A signature mechanism is implemented for each class of instructions and processor elements
  - Fault Coverage metric package (CST)
    - The “stuck-at” fault coverage is measured by using a fault simulation method, the result is a fully “fault graded” library. Coverage > 80%
- Delivery format
  - The CST is delivered as binary array with the full compatibility with EABI standard. Then it can be linked with any application SW

CST is a SEOOC to design application up to ASIL B (not lock-step microcontroller)

# Hardware Development Tools

## Wide offer of hardware tools

ST offers a comprehensive choice of hardware tools from starter kits to evaluation kits to emulation systems

## Modular approach for maximum scalability

The hardware modular approach guarantee high flexibility in development and application scalability

## The SPC5 kits are the reference system for the automotive family of microcontrollers.

From first evaluation to application specific development, SPC5 kits allow full access to CPU's signals and motherboard's peripherals such as CAN, SCI, LIN and Flex-Ray

**Easily prototype  
your application  
on device and  
system platforms**

# Comprehensive Offer

34

Discovery

Premium

Emulation

All-in-One solution for evaluation  
and basic prototyping

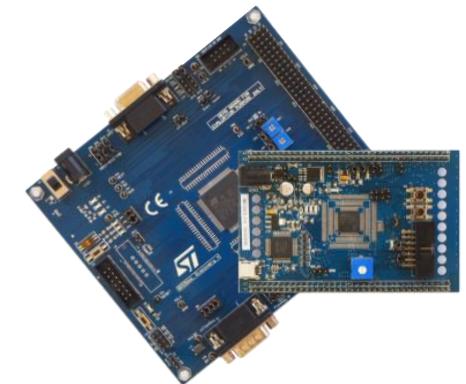

Complete system for advanced  
evaluation and professional  
development

Full solution for advanced  
monitoring and emulation

# Promotion and Evaluation Boards

35

- Two levels of boards to satisfy all needs
  - Premium Evaluation boards
    - Access all peripherals, change MCU using socket and mini-modules
    - Port for JTAG and Nexus trace debuggers
  - Discovery/Discovery+ Boards
    - IC soldered on PCB with customer option to change it
    - Embedded debugger
    - Legacy Automotive connector
    - Connectivity Ports (Can / LIN)
    - Arduino-Compatible (Pictus Discovery+ only)

Promote the solution enabling immediate user operation  
Connect to other system in automotive environment  
Debug your application  
Connect extension modules with ST smart power devices  
Connect ARDUINO World

# SPC5 Discovery Kits

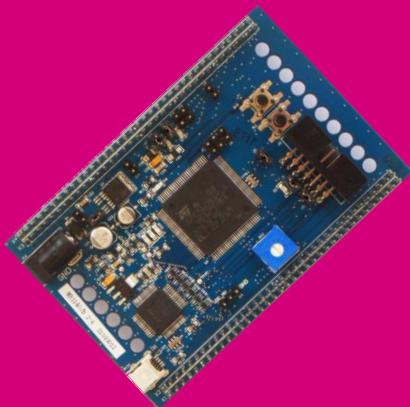

36

An entry-level solution with integrated debugger to enable a quick evaluation of main functionalities at an affordable cost \*

The expansion connector makes it easy to plug in application and extension modules for rapid prototyping, while Arduino-compatible connectors allow the use of a wide choice of specialized shields

Developers benefit from the fully customizable SPC5Studio development environment with its intuitive user interface

**Evaluate SPC5 MCUs at a budget price**

\* Features depending on specific Discovery

# SPC56 Discoveries World

37

## SPC56D-Discovery with SPC560D40L1

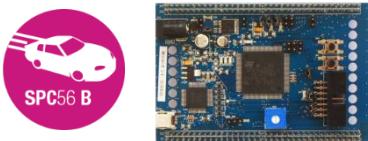

- order code: SPC560D-DIS

- Embedded debugger (up to 128Kbyte free)
- Optocoupler for USB isolation,
- All I/O accessible on connectors
- Standard connector (type B)

## SPC56B-Discovery with SPC560B54L5

- order code: SPC560B-DIS

- Embedded debugger (up to 128Kbyte free)
- Optocoupler for USB isolation,
- All I/O accessible on connectors
- Standard connector (type B)

## SPC56L-Discovery with SPC56EL60L5

- order code: SPC56EL70-DISP

- Can, Lin Connectivity on board (included transceivers)
- Standard connector (type A)

## SPC56P-Discovery with SPC560P50L5:

- order code: SPC560P-DISP

- Embedded detachable on board JTAG debugger (up to 128Kbyte free)
- Can, Lin Connectivity on board (included transceivers)
- Connector Arduino-Compatible
- Standard connector (type A)

## SPC56M-Discovery with SPC563M64L5

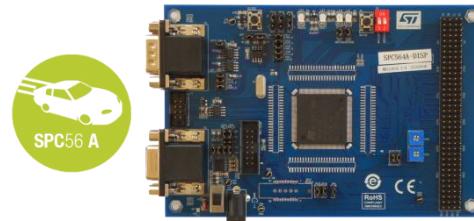

- order code: SPC560M-DISP

- Can, Lin Connectivity on board (included transceivers)
- Standard connector (type A)

## SPC56A-Discovery with SPC563A70L5

- order code: SPC564A-DISP

- Can, Lin Connectivity on board (included transceivers)
- Standard connector (type A)

# SPC57 Discoveries World

38

## SPC57S-Discovery with SPC570S50E1

- order code: SPC570S-DISP

- Embedded debugger (up to 128Kbyte free)
- Can, Lin Connectivity on board (included transceivers)
- Standard connector (type A)

## SPC572L-Discovery with SPC572L64E3

- order code: SPC572L-DISP

- Embedded debugger (up to 128Kbyte free)
- Can, Lin Connectivity on board (included transceivers)
- Standard connector (type A)

## SPC57K-Discovery with SPC574K72E5

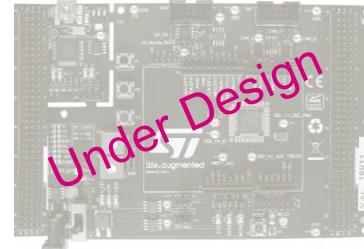

- order code: SPC574K-DISP

- Embedded debugger (up to 128Kbyte free)
- Can, Lin Connectivity on board (included transceivers)
- Ethernet 10-100Mbps on board

## SPC574S-Discovery with SPC574S60E5D

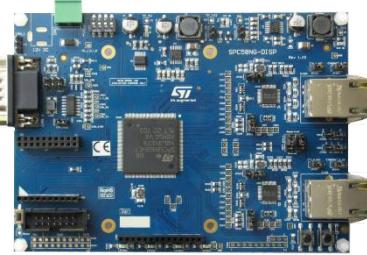

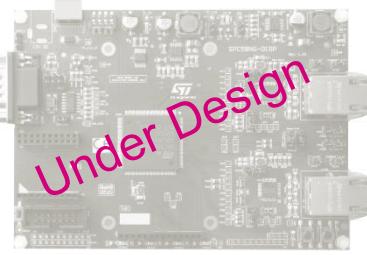

- order code: SPC574S-DISP

- Focused for Motor control Application
- Dual 4x37 connector
- Can, Lin Connectivity on board (included transceivers)

Chorus 6M	SPC58NG-DISP	E7	Discovery Kit for SPC58 NG line. Includes one evaluation board with SPC58NE84E7	SPC58NE84E7

# SPC5 Premium Evaluation Boards

41

With SPC5 Premium boards developers can quickly evaluate all the functionalities of SPC5 automotive MCUs.

Adapter boards are available for each specific device line and package granting full access to all of the CPU's signals and motherboard peripherals for advanced development.

Supported by both SPC5 Studio and 3<sup>rd</sup> party software tools

**Modular approach  
saves  
development time  
and costs**

# Premium Evaluation Board Features

- Modular evaluation system for the SPC5 microcontroller's families
- Single 12V external power supply
- Four on-board regulators
- 5.0 V, 3.3 V and 1.25 V switching regulators
- 5 V linear regulator for the ADC supplies and references
- Master power switch and regulator status LEDs
- Two 240-way high-density expansion connectors for MCU daughter cards
- All MCU signals readily accessible at a port-ordered group of 0.1" pitch headers
- RS232/SCI physical interface and standard DB9 female connector
- FlexRAY channels interface with a DB9 connector (for both transceivers) and alternative connectors
- LINFlexD interface with two different style connectors
- High speed CAN channels and two female standard DB9 connectors
- Ethernet interface with a standard RJ45 Ethernet connector
- Potentiometer for analog voltage input
- User switches and LED's freely configurable

# SPC5 Emulation Boards

50

STMicroelectronics and third parties solutions enable full speed tracing, monitoring and calibration of SPC5 microcontrollers

A comprehensive set of emulation boards and accessories allows emulation of all SPC5 high-level devices

ST and third parties offer complete solutions as Memory/Debug Top Boards, Poly-Pod and interposers complete the offer

**High speed  
solutions for  
tracing,  
monitoring and  
bypassing**

# What is Emulation for?

51

- **Calibration**

Allows to “configure” ECU parameters and adapt them to a specific controlled system

- **Monitoring**

Allows to monitor ECU parameters and values at runtime to observe the system

- **Bypassing**

Allows to bypass the algorithms of the ECU with data computed on an external host

- **Advanced development**

Allows to perform code and data tracing to analyze issues, validate behavior or measure performances

# SPC56 Emulation Solution

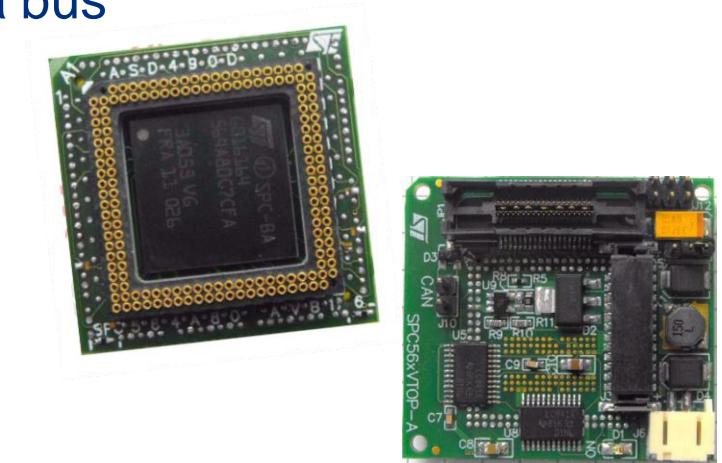

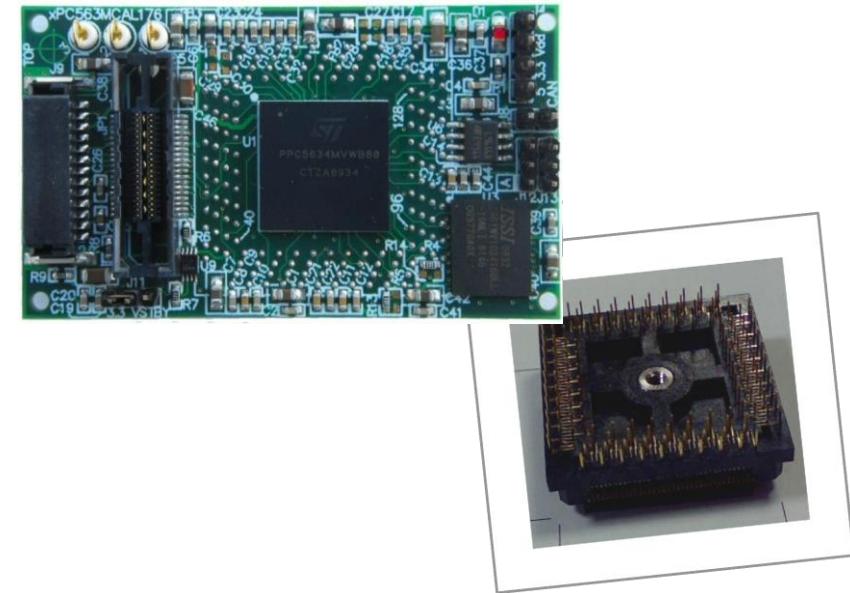

52

- **Serial Calibration**

- JTAG: using Debug Interface
- CAN: Using CCP/XCP
- Dual Port RAM for memory emulation

- **Parallel Calibration :Vertical**

- Direct Access to ECU memory with parallel Address/Data bus
- Dual Port RAM for memory emulation

# SPC56 Emulation Boards

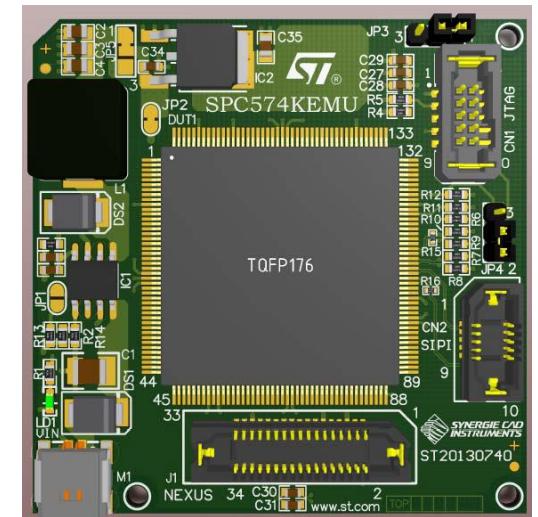

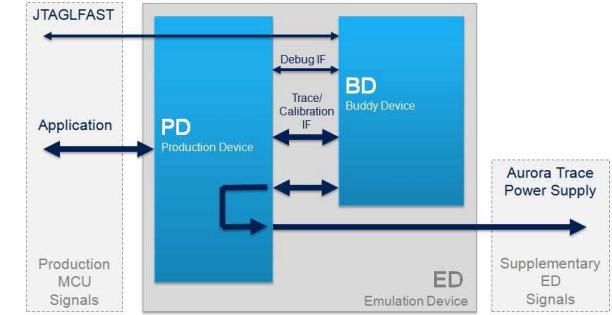

## SPC56 Family, A and M Lines

Line	Device	Part number	Description
M line	SPC563M64L5	<b>SPC563M64AVB144</b>	VertiCal Base Board for M-Line target in LQFP144 package.
	SPC563M64L7	<b>SPC563M64AVB176</b>	VertiCal Base Board for M-Line target in LQFP176 package.
	SPC563M64L5	<b>SPC563M64CAL144</b>	Calibration System for Monaco 1M5 in LQFP144 target package.

	SPC564A70L7	<b>SPC564A70CAL176</b>	Calibration system for A-Line 2M in LQFP176 target package.
	SPC564A80L7	<b>SPC564A80AVB176</b>	VertiCal base board with Advanced Interconnect socket for Andorra 4M in LQFP176 target package.
	SPC564A80B4	<b>SPC564A80AVB324</b>	VertiCal base board for Andorra 4M in BGA324 target package.
	SPC564A80L7	<b>SPC564A80CAL176</b>	Calibration system for target Andorra 4M in QFP176 package.
	SPC564A70L7 SPC564A80L7 SPC564A80B4	<b>SPC56XVTOP-A</b>	RAM/Debug Top Board for Andorra VertiCal Base boards.
All lines	All devices	<b>POLYPOD-BGA324</b>	TQ-PolyPod for BGA324 targets.
	All devices	<b>POLYPOD-TQ144</b>	TQ-PolyPod for QFP144 targets.
	All devices	<b>POLYPOD-TQ176</b>	TQ-PolyPod for QFP176 targets.

# SPC57K&SPC58E/N Emulation Concept

54

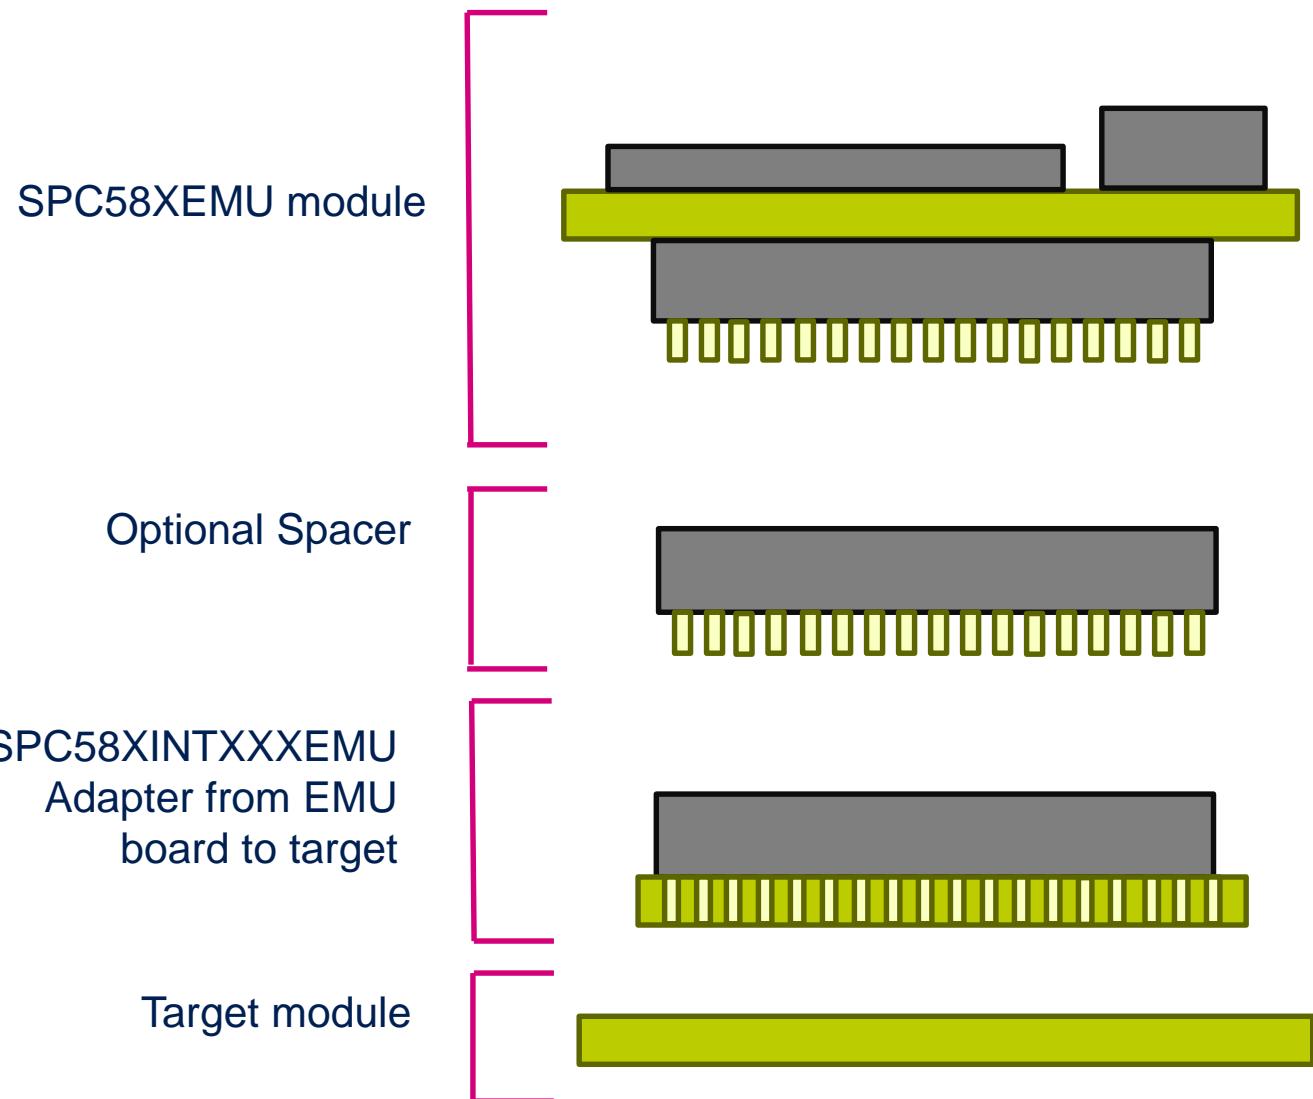

- Present a new strategy for debug and calibration operations.
- Emulation Board is for Emulation and Calibration purpose.
- The product is designed by using an Emulation Device (ED) to substitute the Production Device (PD) on an ECU version used during engine calibration.
- The buddy device integrates additional RAM, faster interfaces and improved debug features.
- The emulation/calibration board do not need external SRAM, since it is included in the Emulation Device.
- The K2 Emulation board is designed to Emulate both eTQFP176 and eTQFP144 production devices. The different footprint target will impact the choice of the adapter to buy.
- The Emulation Device in FQ216 package is mounted on board.

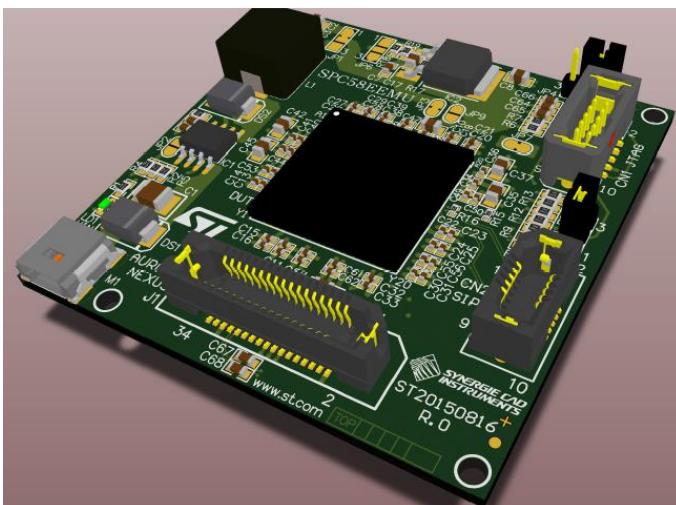

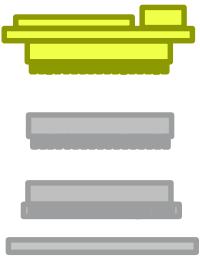

Target board adapter

# SPC58 E/G/N Lines Emulation System

55

# SPC58XEMU Emulation Boards

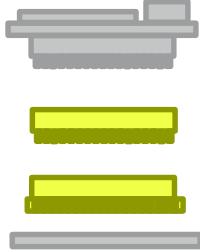

## Main Features

- Allow to emulate SPC58 E/G and N line devices.
- Dual supply: from target or 12V external.
- Onboard 5V regulator for Buddy device.
- JTAG, LFAST and High speed Nexus serial (Aurora) interfaces.
- SIPI connector.
- Optional target adapters for mounting.

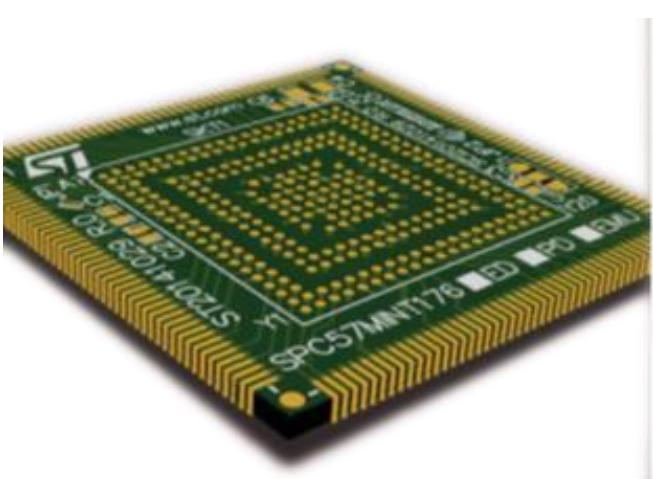

Line	Part number	Description
SPC58 E line	SPC58EEMU	Emulation module for SPC58 E lines.
SPC58 G line	SPC58GEMU	Emulation module for SPC58 G lines.
SPC58 N line	SPC58NEMU	Emulation module for SPC58 N Line.

# SPC58xEMU Mounting Options

57

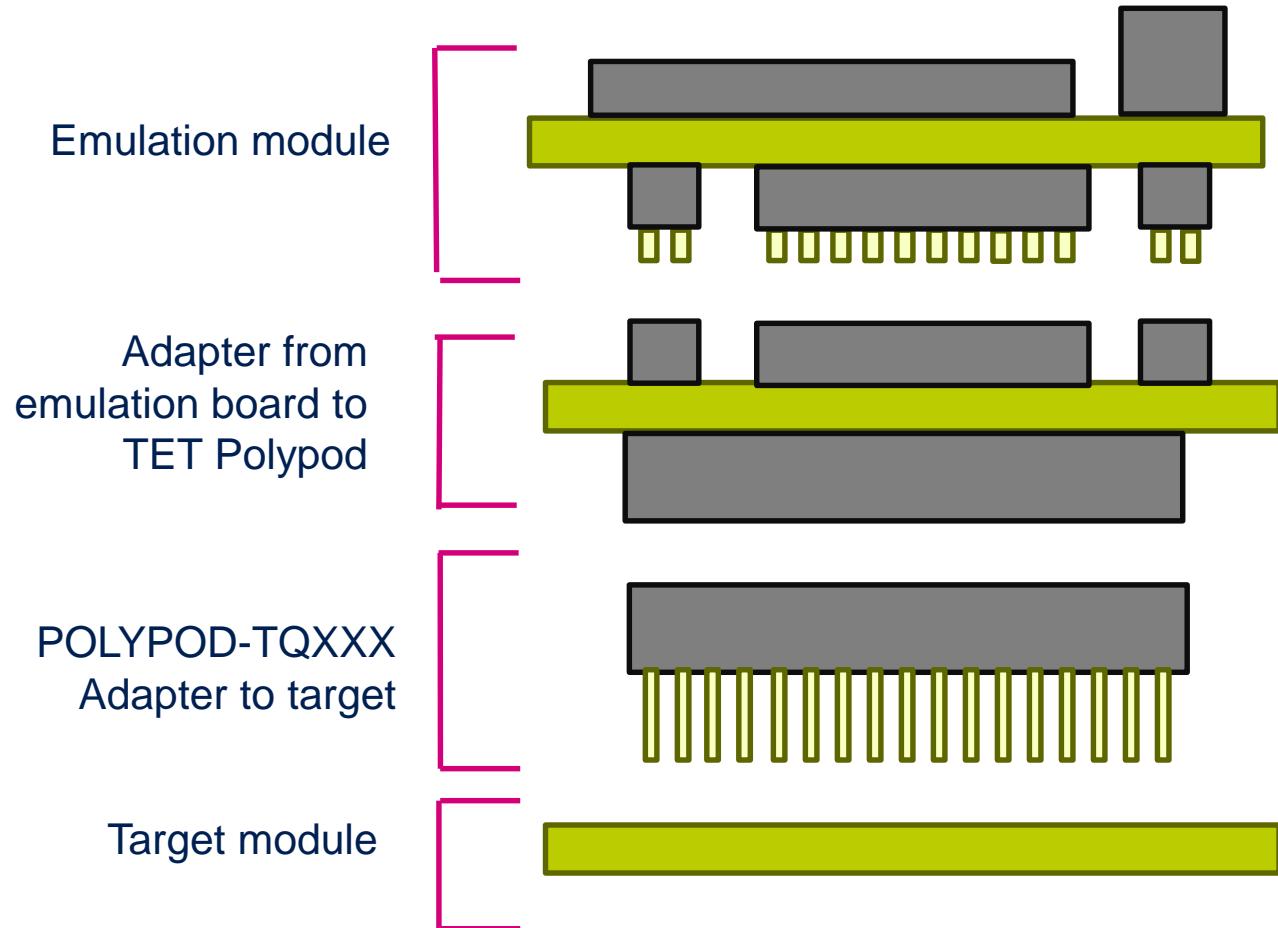

- The SPC58XEMU can be easily mounted on customer's module using an adapter.
- ST offers a specific adapter for each supported target.
- To increase height over PCB a compatible interposer can be used, directly available from socket manufacturers.

Part Number	Description
SPC57MINT292EMU	Interposer for SPC58E/G/NEMU emulation modules targeting BGA292 packages.
SPC57MINT176EMU	Interposer for SPC58E/G/NEMU emulation modules targeting eQFP176 packages.
SPC58XINT144EMU	Interposer for SPC58GEMU emulation modules targeting eQFP144 packages.

# SPC58 B/C Lines Emulation System

58

# SPC58 ISystem Emulation Adapters

- Directly available from iSYSTEM
- iSystem has released their first emulation adapters for the SPC58xB/C line of automotive microcontrollers.
- The emulation adapter primary use case is **providing Nexus trace functionality** for SPC58xB/C line devices in the packages where Nexus trace port is not available.
- The emulation adapter is based on the superset device and provides the adaptation to the other target packages.
- <https://www.isystem.com/mcu-search/stm-mcus/st-microelectronics-power-architecture-overview.html>
- <https://www.isystem.com/products/hardware/emulation-debug-adapters/emulation-adapters.html>

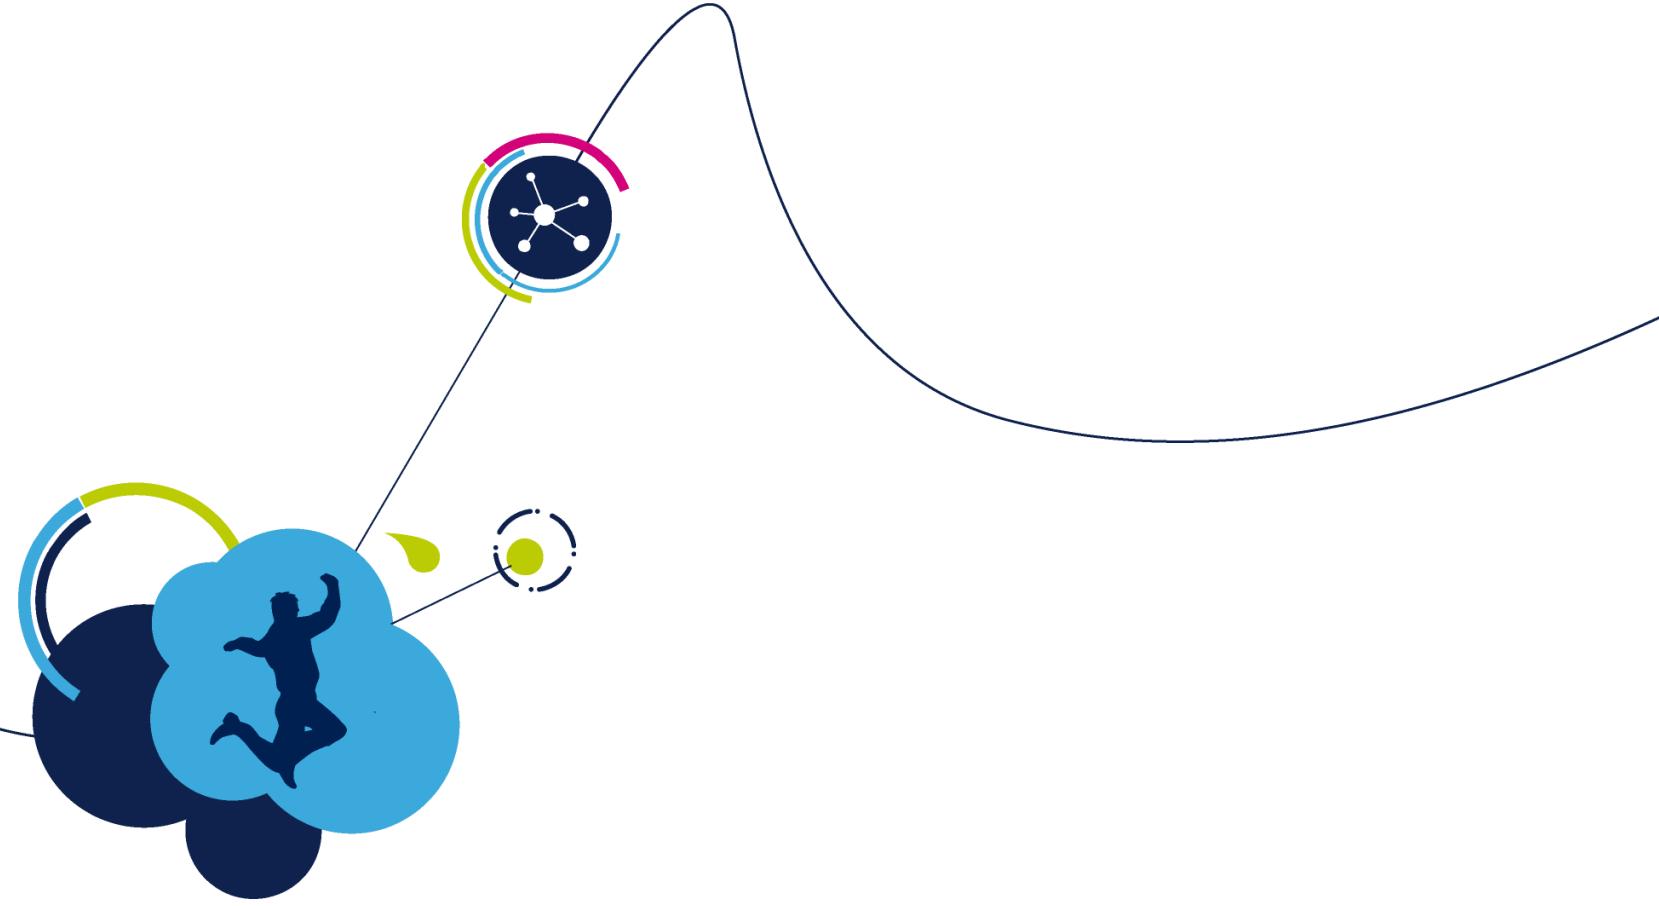

Line	Part number	Description
SPC58 C line	IEA-SPC58EC	Emulation adapter for SPC58 C line.
SPC58 2B line	IEA-SPC582B	Emulation module for SPC58 2B line.
SPC58 4B line	-	[Available soon] Emulation module for SPC58 4B line.

# SPC 57/58 Emulation Boards

	SPC58xNxxC3	<b>SPC57MINT292EMU</b>	Target board adapter for SPC57EMEMU and SPC58EEMU emulation modules and BGA292 packages.
	SPC58xNxxE7	<b>SPC57MINT176EMU</b>	Target board adapter for SPC57EMEMU and SPC58EEMU emulation modules and BGA292 packages

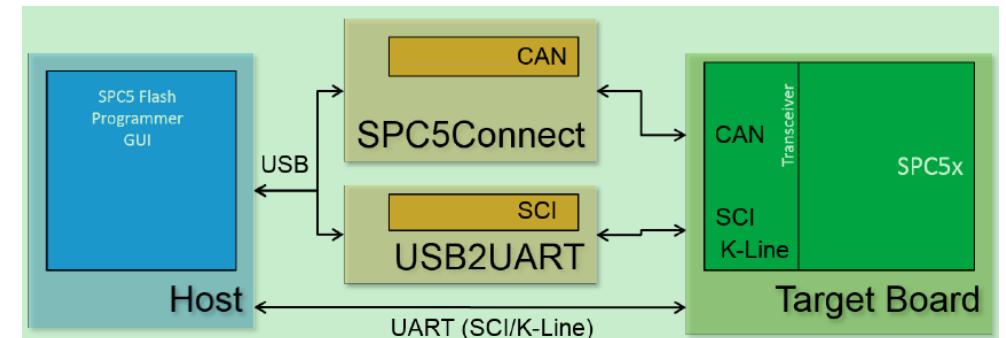

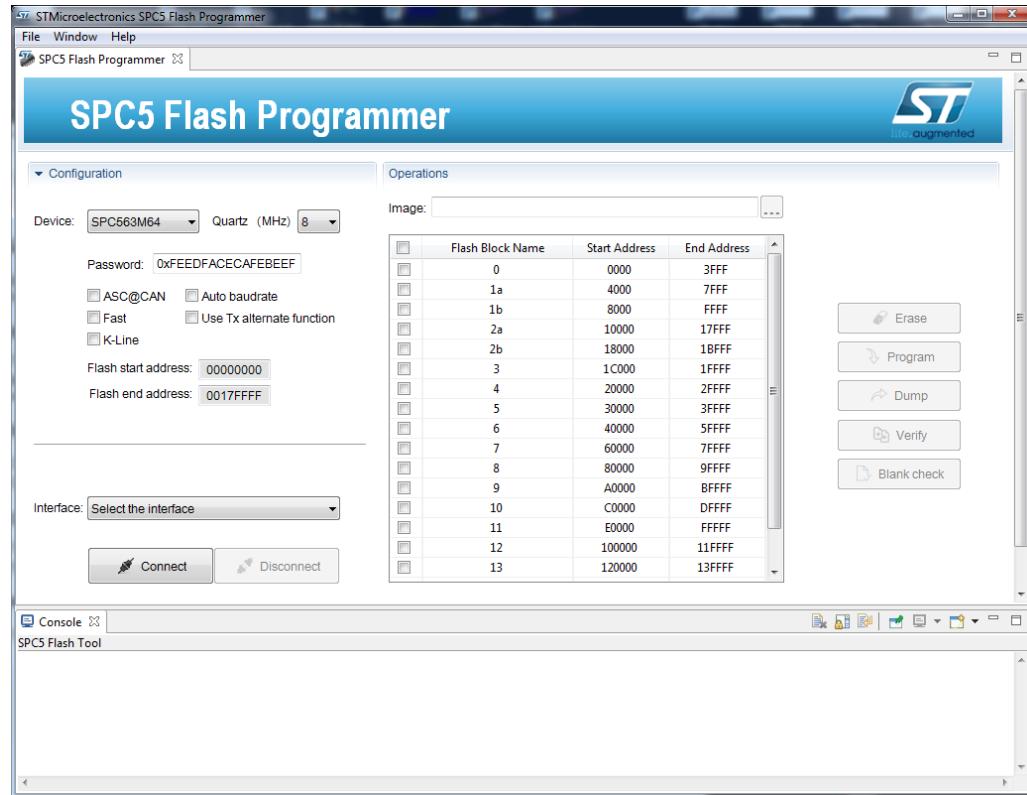

# ST Flash Programmer Tools

# SPC5 Flash Programmer

62

- SPC5-Flash Programmer application manages flash operations on SPC5 MCU using the BAM/BAF functionality.
- The tool features are:
  - SPC56, SPC57 and SPC58 families support.
  - All operations supported: program, dump, erase, verify and blank check.
  - Multiple binary image format (s19, run, hex).
  - All memory sectors addressable separately.
  - Memory dump in hex format.
  - Censorship management.
  - SCI, K-Line and CAN interfaces.
- The top level diagram of the SPC5 Flash Programmer.
- The latest version is V2.7.1

	SPC582B54	N	20, 40 MHz	N
	SPC582B50	N	20, 40 MHz	N

- A programmable USB interface designed to connect a PC to development hardware via automotive communications channels such as CAN, SCI, LIN and K-Line.
- The included extension flat cable with the 14 pin header connector and the DB9 connector makes possible to easily connect a daughter board or wrapping board for a specific application.
- SPC5Connect can be used together with SPC5Flashprogrammer to realize the Serial boot from CAN interface.

# 3rd Party Development Tools Support

# HighTec Technology for 32-bit Automotive MCUs

66

HighTec has been selected by ST as Only Preferred Partner to support the current and the next generation of 32-bit Automotive Microcontrollers

Free Entry Toolchain  
Automotive Graded Commercial Toolchain

- The **Free Entry Toolchain** offers to the customer a complete evaluation KIT for all the microcontroller
- The **Commercial Toolchain** supports the customer for the production

# OCEAN CHIPS

## Океан Электроники

### Поставка электронных компонентов

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибутором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибутором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
