## MAX12930/MAX12931

## Two-Channel, Low-Power, 3kV<sub>RMS</sub> and 5kV<sub>RMS</sub> Digital Isolators

### General Description

The MAX12930/MAX12931 are a family of 2-channel, 3kV/5kV<sub>RMS</sub> digital galvanic isolators using Maxim's proprietary process technology. These devices transfer digital signals between circuits with different power domains while using as little as 0.65mW per channel at 1Mbps with 1.8V.

The two channels of the MAX12931 transfer data in opposite directions, and this makes the MAX12931 ideal for isolating the TX and RX lines of a transceiver. The MAX12930 features two channels transferring data in the same direction.

Both devices are available with a maximum data rate of either 25Mbps or 150Mbps and with the default outputs that are either high or low. The default is the state the output assumes when the input is not powered, or if the input is open-circuit. See the [Ordering Information](#) for suffixes associated with each option. Independent 1.71V to 5.5V supplies on each side of the isolator also make the devices suitable for use as level translators.

The MAX12930/MAX12931 are available in an 8-pin, narrow-body SOIC package. In addition, the MAX12931 is available in a 16-pin, wide-body SOIC package. The package material of the 8-pin narrow-body SOIC package has a minimum comparative tracking index (CTI) of 400V, which gives it a group II rating in creepage tables. The package material of the 16-pin wide-body SOIC package has a CTI of 600V, which gives it a group I rating in creepage tables. All devices are rated for operation at ambient temperatures of -40°C to +125°C.

### Benefits and Features

- Robust Galvanic Isolation of Digital Signals
  - Withstands 5kV<sub>RMS</sub> for 60s (V<sub>ISO</sub>) Wide-Body
  - Withstands 3kV<sub>RMS</sub> for 60s (V<sub>ISO</sub>) Narrow-Body
  - Continuously Withstands 848V<sub>RMS</sub> (V<sub>IOWM</sub>) Wide-Body
  - Continuously Withstands 445V<sub>RMS</sub> (V<sub>IOWM</sub>) Narrow-Body
  - Withstands ±10kV Surge Between GNDA and GNDB with 1.2/50µs Waveform
  - High CMTI (50kV/µs, typ)
- Options to Support a Broad Range of Applications
  - 2 Data Rates (25Mbps/150Mbps)
  - 2 Channel Direction Configurations
  - 2 Output Default States (High or Low)
- Low Power Consumption
  - 1.3mW per Channel at 1Mbps with V<sub>DD</sub> = 3.3V
  - 3.3mW per Channel at 100Mbps with V<sub>DD</sub> = 1.8V

### Safety Regulatory Approvals

(see [Safety Regulatory Approvals](#))

- UL According to UL1577
- cUL According to CSA Bulletin 5A
- VDE 0884-10 Basic

### Applications

- Fieldbus Communications for Industrial Automation
- Isolated RS232, RS-485/RS-422, CAN
- General Isolation Application
- Battery Management
- Medical Systems

[Ordering Information](#) appears at end of data sheet.

### Functional Diagrams

**Absolute Maximum Ratings**

V <sub>DDA</sub> to GNDA.....	-0.3V to +6V	Continuous Power Dissipation (T <sub>A</sub> = +70°C) Wide SOIC (derate 14.1mW/°C above +70°C) ..... 1126.8mW Narrow SOIC (derate 5.9mW/°C above +70°C).....470.6mW Operating Temperature Range..... -40°C to +125°C Maximum Junction Temperature ..... +150°C Storage Temperature Range..... -60°C to +150°C Soldering Temperature (reflow) ..... +260°C
V <sub>DDB</sub> to GNDB.....	-0.3V to +6V	
IN_ on SIDE A to GNDA.....	-0.3V to +6V	
IN_ on SIDE B to GNDB.....	-0.3V to +6V	
OUT_ on SIDE A to GNDA.....	-0.3V to V <sub>DDA</sub> + 0.3V	
OUT_ on SIDE B to GNDB.....	-0.3V to V <sub>DDB</sub> + 0.3V	
Short-Circuit Duration		
OUT_ on SIDE A to GNDA,		
OUT_ on SIDE B to GNDB.....	Continuous	

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Package Information**

<b>PACKAGE TYPE: 8 NARROW SOIC</b>	
Package Code	S8MS-22
Outline Number	<a href="#">21-0041</a>
Land Pattern Number	<a href="#">90-0096</a>
<b>THERMAL RESISTANCE, FOUR-LAYER BOARD</b>	
Junction to Ambient (θ <sub>JA</sub> )	170°C/W
Junction to Case (θ <sub>JC</sub> )	38°C/W

<b>PACKAGE TYPE: 16 WIDE SOIC</b>	
Package Code	W16MS-11
Outline Number	<a href="#">21-0042</a>
Land Pattern Number	<a href="#">90-0107</a>
<b>THERMAL RESISTANCE, FOUR-LAYER BOARD</b>	
Junction to Ambient (θ <sub>JA</sub> )	71°C/W
Junction to Case (θ <sub>JC</sub> )	23°C/W

For the latest package outline information and land patterns (footprints), go to [www.maximintegrated.com/packages](http://www.maximintegrated.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maximintegrated.com/thermal-tutorial](http://www.maximintegrated.com/thermal-tutorial).

**DC Electrical Characteristics**

(V<sub>DDA</sub> - V<sub>GNDA</sub> = 1.71V to 5.5V, V<sub>DDB</sub> - V<sub>GNDB</sub> = 1.71V to 5.5V, C<sub>L</sub> = 15pF, T<sub>A</sub> = -40°C to +125°C, unless otherwise noted. Typical values are at V<sub>DDA</sub> - V<sub>GNDA</sub> = 3.3V, V<sub>DDB</sub> - V<sub>GNDB</sub> = 3.3V, GNDA = GNDB, T<sub>A</sub> = 25°C, unless otherwise noted.) (Note 1)

		$1.71V \leq V_{DD\_} \leq 1.89V$			5.1	

**Note 1:** All devices are 100% production tested at  $T_A = +25^\circ C$ . Specifications over temperature are guaranteed by design.

**Note 2:** Not production tested. Guaranteed by design and characterization.

**Note 3:** All currents into the device are positive. All currents out of the device are negative. All voltages are referenced to their respective ground (GNDA or GNDB), unless otherwise noted.

**Note 4:** CMTI is the maximum sustainable common-mode voltage slew rate while maintaining the correct output. CMTI applies to both rising and falling common-mode voltage sedges. Tested with the transient generator connected between GNDA and GNDB ( $V_{CM} = 1000V$ ).

**ESD Protection**

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
ESD		Human Body Model, all pins		$\pm 3$		kV

**Safety Regulatory Approvals**

<b>UL</b>
The MAX12930–MAX12931 narrow-body SOIC are certified under UL1577. For more details, refer to file E351759.
Rated up to 3000V <sub>RMS</sub> isolation voltage for single protection.
<b>cUL (Equivalent to CSA Notice 5A)</b>
The MAX12930–MAX12931 narrow-body SOIC are certified up to 3000V <sub>RMS</sub> for single protection. For more details, refer to file E351759.
<b>UL</b>
The MAX12931 wide-body SOIC is certified under UL1577. For more details, refer to file E351759.
Rated up to 5000V <sub>RMS</sub> isolation voltage for single protection.
<b>cUL (Equivalent to CSA notice 5A)</b>
The MAX12931 wide-body SOIC is certified up to 5000V <sub>RMS</sub> for single protection. For more details, refer to file E351759.
<b>VDE</b>
The MAX12930–MAX12931 are certified to DIN V VDE V 0884-10 (VDE V 0884-10): 2006-12.
Narrow-body SOIC Basic Insulation, Maximum Transient Isolation Voltage 4200V <sub>PK</sub> , Maximum Repetitive Peak Isolation Voltage 630V <sub>PK</sub> .

Typical Operating Circuit

## Detailed Description

The MAX12930/MAX12931 are a family of 2-channel digital isolators. The MAX12930 transfers digital signals between circuits with different power domain in one direction, which is convenient for applications such as digital I/O. The MAX12931 transfers digital signals in opposite directions, which is necessary for isolated RS-485 or other UART applications.

Devices available in the 8-pin narrow body SOIC package are rated for up to 3kV<sub>RMS</sub> isolation voltage for 60 seconds and the device in the 16-pin wide body SOIC package is rated for up to 5kV<sub>RMS</sub>. This family of digital isolators offers low-power operation, high electromagnetic interference (EMI) immunity, and stable temperature performance through Maxim's proprietary process technology. The devices isolate different ground domains and block high-voltage/high-current transients from sensitive or human interface circuitry.

Devices are available with data rates from DC to 25Mbps (B/E versions) or 150Mbps (C/F versions). Each device can be ordered with default-high or default-low outputs. The default is the state the output assumes when the input is not powered, or if the input is open circuit.

The devices have two supply inputs (V<sub>DDA</sub> and V<sub>ddb</sub>) that independently set the logic levels on either side of device. V<sub>DDA</sub> and V<sub>ddb</sub> are referenced to GNDA and GNDB, respectively. The MAX12930/MAX12931 family also features a refresh circuit to ensure output accuracy when an input remains in the same state indefinitely.

## Digital Isolation

The device family provides galvanic isolation for digital signals that are transmitted between two ground domains. Up to 630V<sub>PEAK</sub> of continuous isolation is supported

in the narrow SOIC package and up to 1200V<sub>PEAK</sub> of continuous isolation is supported in the wide SOIC package. The devices withstand differences of up to 3kV<sub>RMS</sub> in the 8-pin narrow SOIC package or 5kV<sub>RMS</sub> in the 16-pin wide SOIC package for up to 60 seconds.

## Level-Shifting

The wide supply voltage range of both V<sub>DDA</sub> and V<sub>ddb</sub> allows the MAX12930/MAX12931 family to be used for level translation in addition to isolation. V<sub>DDA</sub> and V<sub>ddb</sub> can be independently set to any voltage from 1.71V to 5.5V. The supply voltage sets the logic level on the corresponding side of the isolator.

## Unidirectional Channels

Each channel of the MAX12930/MAX12931 is unidirectional; it only passes data in one direction, as indicated in the functional diagram. Each device features two unidirectional channels that operate independently with guaranteed data rates from DC up to 25Mbps (B/E versions), or DC to 150Mbps (C/F versions). The output driver of each channel is push-pull, eliminating the need for pullup resistors. The outputs are able to drive both TTL and CMOS logic inputs.

## Startup and Undervoltage-Lockout

The V<sub>DDA</sub> and V<sub>ddb</sub> supplies are both internally monitored for undervoltage conditions. Undervoltage events can occur during power-up, power-down, or during normal operation due to a sagging supply voltage. When an undervoltage condition is detected on either supply, all outputs go to their default states regardless of the state of the inputs (Table 3). Figure 2 through Figure 5 show the behavior of the outputs during power-up and power-down.

**Table 3. Output Behavior During Undervoltage Conditions**

V <sub>IN</sub> _	V <sub>DDA</sub>	V <sub>ddb</sub>	V <sub>OUTA</sub> _	V <sub>OUTB</sub> _

Figure 4. Undervoltage Lockout Behavior (MAX1293\_E/F High)

Figure 5. Undervoltage Lockout Behavior (MAX1293\_E/F Low)

## Application Information

### Power-Supply Sequencing

The MAX12930/MAX12931 do not require special power supply sequencing. The logic levels are set independently on either side by V<sub>DDA</sub> and V<sub>DDDB</sub>. Each supply can be present over the entire specified range regardless of the level or presence of the other supply.

### Power-Supply Decoupling

To reduce ripple and the chance of introducing data errors, bypass V<sub>DDA</sub> and V<sub>DDDB</sub> with 0.1μF low-ESR ceramic capacitors to GNDA and GNDB, respectively. Place the bypass capacitors as close to the power supply input pins as possible.

### Layout Considerations

The PCB designer should follow some critical recommendation in order to get the best performance from the design.

- Keep the input/output traces as short as possible. Avoid using vias to make low-inductance paths for the signals.
- Have a solid ground plane underneath the high-speed signal layer.
- Keep the area underneath the MAX12930/MAX12931 free from ground and signal planes. Any galvanic or metallic connection between the field-side and logic-side defeats the isolation.

## Calculating Power Dissipation

The required current for a given supply (V<sub>DDA</sub> or V<sub>DDDB</sub>) can be estimated by summing the current required for each channel. The supply current for a channel depends on whether the channel is an input or an output, the channel's data rate, and the capacitive or resistive load if it is an output. The typical current for an input or output at any data rate can be estimated from the graphs in [Figure 6](#) and [Figure 7](#). Please note that the data in [Figure 6](#) and [Figure 7](#) are extrapolated from the supply current measurements in a typical operating condition.

The total current for a single channel is the sum of the “no load” current (shown in [Figure 6](#) and [Figure 7](#)) which is a function of Voltage and Data Rate, and the “load current” which depends upon the type of load. Current into a capacitive load is a function of the load capacitance, the switching frequency, and the supply voltage.

$$I_{CL} = C_L \times f_{SW} \times V_{DD}$$

where,

I<sub>CL</sub> = Current required to drive the capacitive load.

C<sub>L</sub> = Load capacitance on the isolator's output pin.

f<sub>SW</sub> = Switching frequency (bits per second/2).

V<sub>DD</sub> = Supply voltage on the output side of the isolator.

Current into a resistive load depends on the load resistance, the supply voltage and the average duty cycle of the data waveform. The DC load current can be conservatively estimated by assuming the output is always high.

$$I_{RL} = V_{DD} \div R_L$$

where,

I<sub>RL</sub> = Current required to drive the resistive load.

V<sub>DD</sub> = Supply voltage on the output side of the isolator.

R<sub>L</sub> = Load resistance on the isolator's output pin.

Example (shown in [Figure 8](#)): A MAX12931F is operating with V<sub>DDA</sub> = 2.5V, V<sub>DDDB</sub> = 3.3V, channel 1 operating at 100Mbps with a 15pF capacitive load, and channel 2 operating at 20Mbps with a 10pF capacitive load. Refer to [Table 4](#) and [Table 5](#) for V<sub>DDA</sub> and V<sub>DDDB</sub> supply current calculation worksheets.

#### V<sub>DDA</sub> must supply:

Channel 1 is an output channel operating at 2.5V and 100Mbps, consuming 1.02mA, estimated from [Figure 7](#). Channel 2 is an input channel operating at 2.5V and 20Mbps, consuming 0.33mA, estimated from [Figure 6](#). I<sub>CL</sub> on channel 1 for 15pF capacitor at 2.5V and 100Mbps is 1.875mA.

**Total current for side A = 1.02 + 0.33 + 1.875 = 3.225mA, typical**

#### V<sub>DDDB</sub> must supply:

Channel 1 is an input channel operating at 3.3V and 100Mbps, consuming 1.13mA, estimated from [Figure 6](#). Channel 2 is an output channel operating at 3.3V and 20Mbps, consuming 0.42mA, estimated from [Figure 7](#). I<sub>CL</sub> on channel 2 for 10pF capacitor at 3.3V and 20Mbps is 0.33mA.

**Total current for side B = 1.13 + 0.42 + 0.33 = 1.88mA, typical**

Figure 6. Supply Current per Input Channel Versus Data Rate

Figure 7. Supply Current per Output Channel Versus Data Rate

Figure 8. Example Circuit for Supply Current Calculation

**Table 4. Side A Supply Current Calculation Worksheet**

SIDE A		V <sub>DDA</sub> = 2.5V				
CHANNEL	IN/OUT	FREQUENCY (Mbps)	LOAD TYPE	LOAD	“NO LOAD” CURRENT (mA)	LOAD CURRENT (mA)
1	OUT	100	Capacitive	15pF	1.02	2.5V x 50MHz x 15pF = 1.875mA
2	IN	20			0.33	
Total:					3.225mA	

**Table 5. Side B Supply Current Calculation Worksheet**

SIDE B		V <sub>DDB</sub> = 3.3V				
CHANNEL	IN/OUT	FREQUENCY (Mbps)	LOAD TYPE	LOAD	“NO LOAD” CURRENT (mA)	LOAD CURRENT (mA)
1	IN	100			1.13	
2	OUT	20	Capacitive	10pF	0.42	3.3V x 10MHz x 10pF = 0.33mA
Total:					1.88mA	

## Ordering Information

PART	CHANNEL CONFIGURATION	DATA RATE (Mbps)	DEFAULT OUTPUT	ISOLATION VOLTAGE (kV <sub>RMS</sub> )	TEMP RANGE	PIN-PACKAGE
<b>MAX12930</b> BASA+	2/0	25	High	3	-40°C to 125°C	8 Narrow SOIC
MAX12930CASA+	2/0	150	High	3	-40°C to 125°C	8 Narrow SOIC
MAX12930EASA+	2/0	25	Low	3	-40°C to 125°C	8 Narrow SOIC
MAX12930FASA+	2/0	150	Low	3	-40°C to 125°C	8 Narrow SOIC
<b>MAX12931</b> BASA+	1/1	25	High	3	-40°C to 125°C	8 Narrow SOIC
MAX12931CASA+	1/1	150	High	3	-40°C to 125°C	8 Narrow SOIC
MAX12931EASA+	1/1	25	Low	3	-40°C to 125°C	8 Narrow SOIC
MAX12931FASA+	1/1	150	Low	3	-40°C to 125°C	8 Narrow SOIC
MAX12931BAWE+	1/1	25	High	5	-40°C to 125°C	16 Wide SOIC

+Denotes a lead(Pb)-free/RoHS-compliant package.

## Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
0	6/16	Initial release	—
1	3/17	Added <i>Safety Regulatory Approvals</i> section, updated <i>Absolute Maximum Rating</i> , <i>Package Thermal Characteristics</i> , and <i>Electrical Characteristics</i> sections, and removed future product status from MAX12930FASA+ and MAX12931BASA+	1, 2, 5, 7–13, 15–19
2	8/17	Removed future asterisk from MAX12931FASA+ in <i>Ordering Information</i> table	21
3	10/17	Removed future asterisk from MAX12930BASA+ in <i>Ordering Information</i> table	21
4	11/18	Removed future asterisk from MAX12930EASA+ and MAX12931EASA+ in <i>Ordering Information</i> table	21
5	3/19	Added "VDE 0884-10 Basic" under <i>Safety Regulatory Approvals</i> , and updated the table. Updated Table 1 and Table 2	1, 8, 9, 10
6	8/19	Updated the <i>General Description</i> , Table 1, and Table 2; corrected subscripts in the <i>Benefits and Features</i> section	1, 9, 10
7	10/19	Removed future product asterisk from MAX12930CASA+	21
8	11/19	Removed future product asterisk from MAX12931CASA+	21

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
