

Anything-to-LVDS Dual 2 x 2 Crosspoint Switches

MAX9392/MAX9393

General Description

The MAX9392/MAX9393 dual 2 x 2 crosspoint switches perform high-speed, low-power, and low-noise signal distribution. The MAX9392/MAX9393 multiplex one of two differential input pairs to either or both low-voltage differential signaling (LVDS) outputs for each channel. Independent enable inputs turn on or turn off each differential output pair.

Four LVCMOS/LVTTL logic inputs (two per channel) control the internal connections between inputs and outputs. This flexibility allows for the following configurations: 2 x 2 crosspoint switch, 2:1 mux, 1:2 splitter, or dual repeater. This makes the MAX9392/MAX9393 ideal for protection switching in fault-tolerant systems, loopback switching for diagnostics, fanout buffering for clock/data distribution, and signal regeneration.

Fail-safe circuitry forces the outputs to a differential low condition for undriven inputs or when the common-mode voltage exceeds the specified range. The MAX9392 provides high-level input fail-safe detection for LVDS, HSTL, and other GND-referenced differential inputs. The MAX9393 provides low-level input fail-safe detection for LVPECL, CML, and other V_{CC}-referenced differential inputs.

Ultra-low 98ps_(P-P) (max) pseudorandom bit sequence (PRBS) jitter ensures reliable communications in high-speed links that are highly sensitive to timing error, especially those incorporating clock-and-data recovery, or serializers and deserializers. The high-speed switching performance guarantees 1.5GHz operation and less than 67ps (max) skew between channels.

LVDS inputs and outputs are compatible with the TIA/EIA-644 LVDS standard. The LVDS outputs drive 100Ω loads. The MAX9392/MAX9393 are offered in a 32-pin TQFP package and operate over the extended temperature range (-40°C to +85°C).

Also see the MAX9390/MAX9391 for the crossflow version.

Applications

- High-Speed Telecom/Datacom Equipment
- Central-Office Backplane Clock Distribution
- DSLAM
- Protection Switching
- Fault-Tolerant Systems

Functional Diagram and Typical Operating Circuit appear at end of data sheet.

Features

- ◆ 1.5GHz Operation with 250mV Differential Output Swing
- ◆ 2ps_{RMS} (max) Random Jitter
- ◆ AC Specifications Guaranteed for 150mV Differential Input
- ◆ Signal Inputs Accept Any Differential Signaling Standard
- ◆ LVDS Outputs for Clock or High-Speed Data
- ◆ High-Level Input Fail-Safe Detection (MAX9392)
- ◆ Low-Level Input Fail-Safe Detection (MAX9393)
- ◆ 3.0V to 3.6V Supply Voltage Range
- ◆ LVCMOS/LVTTL Logic Inputs Control Signal Routing

Pin Description

MAX9392/MAX9393

PIN	NAME	FUNCTION
1, 12, 20, 25	GND	Ground
2	INB0	LVDS/HSTL (MAX9392) or LVPECL/CML (MAX9393) Noninverting Input. An internal 128kΩ resistor to V _{CC} pulls the input high when unconnected (MAX9392). An internal 68kΩ resistor to GND pulls the input low when unconnected (MAX9393).
3	$\overline{\text{INB0}}$	LVDS/HSTL (MAX9392) or LVPECL/CML (MAX9393) Inverting Input. An internal 128kΩ resistor to V _{CC} pulls the input high when unconnected (MAX9392). An internal 68kΩ resistor to GND pulls the input low when unconnected (MAX9393).
4	BSEL0	Input Select for B0 Output. Selects the differential input to reproduce at the B0 differential outputs. Connect BSEL0 to GND or leave open to select the INB0 ($\overline{\text{INB0}}$) set of inputs. Connect BSEL0 to V _{CC} to select the INB1 ($\overline{\text{INB1}}$) set of inputs. An internal 435kΩ resistor pulls BSEL0 low when unconnected.
5, 16, 24, 29	V _{CC}	Power-Supply Input. Bypass each V _{CC} to GND with 0.1μF and 0.01μF ceramic capacitors. Install both bypass capacitors as close to the device as possible, with the 0.01μF capacitor closest to the device.
6	INB1	LVDS/HSTL (MAX9392) or LVPECL/CML (MAX9393) Noninverting Input. An internal 128kΩ resistor to V _{CC} pulls the input high when unconnected (MAX9392). An internal 68kΩ resistor to GND pulls the input low when unconnected (MAX9393).
7	$\overline{\text{INB1}}$	LVDS/HSTL (MAX9392) or LVPECL/CML (MAX9393) Inverting Input. An internal 128kΩ resistor to V _{CC} pulls the input high when unconnected (MAX9392). An internal 68kΩ resistor to GND pulls the input low when unconnected (MAX9393).
8	BSEL1	Input Select for B1 Output. Selects the differential input to reproduce at the B1 differential outputs. Connect BSEL1 to GND or leave open to select the INB0 ($\overline{\text{INB0}}$) set of inputs. Connect BSEL1 to V _{CC} to select the INB1 ($\overline{\text{INB1}}$) set of inputs. An internal 435kΩ resistor pulls BSEL1 low when unconnected.
9	ENB1	B1 Output Enable. Drive ENB1 high to enable the B1 LVDS outputs. An internal 435kΩ resistor pulls ENB1 low when unconnected.
10	$\overline{\text{OUTB1}}$	B1 LVDS Inverting Output. Connect a 100Ω termination resistor between OUTB1 and $\overline{\text{OUTB1}}$ at the receiver inputs to ensure proper operation.
11	OUTB1	B1 LVDS Noninverting Output. Connect a 100Ω termination resistor between OUTB1 and $\overline{\text{OUTB1}}$ at the receiver inputs to ensure proper operation.
13	ENB0	B0 Output Enable. Drive ENB0 high to enable the B0 LVDS outputs. An internal 435kΩ resistor pulls ENB0 low when unconnected.
14	$\overline{\text{OUTB0}}$	B0 LVDS Inverting Output. Connect a 100Ω termination resistor between OUTB0 and $\overline{\text{OUTB0}}$ at the receiver inputs to ensure proper operation.
15	OUTB0	B0 LVDS Noninverting Output. Connect a 100Ω termination resistor between OUTB0 and $\overline{\text{OUTB0}}$ at the receiver inputs to ensure proper operation.

Anything-to-LVDS Dual 2 x 2 Crosspoint Switches

Pin Description (continued)

PIN	NAME	FUNCTION
17	ENA1	A1 Output Enable. Drive ENA1 high to enable the A1 LVDS outputs. An internal 435k Ω resistor pulls ENA1 low when unconnected.
18	$\overline{\text{OUTA1}}$	A1 LVDS Inverting Output. Connect a 100 Ω termination resistor between OUTA1 and $\overline{\text{OUTA1}}$ at the receiver inputs to ensure proper operation.
19	OUTA1	A1 LVDS Noninverting Output. Connect a 100 Ω termination resistor between OUTA1 and $\overline{\text{OUTA1}}$ at the receiver inputs to ensure proper operation.
21	ENA0	A0 Output Enable. Drive ENA0 high to enable the A0 LVDS outputs. An internal 435k Ω resistor pulls ENA0 low when unconnected.
22	$\overline{\text{OUTA0}}$	A0 LVDS Inverting Output. Connect a 100 Ω termination resistor between OUTA0 and $\overline{\text{OUTA0}}$ at the receiver inputs to ensure proper operation.
23	OUTA0	A0 LVDS Noninverting Output. Connect a 100 Ω termination resistor between OUTA0 and $\overline{\text{OUTA0}}$ at the receiver inputs to ensure proper operation.
26	INA0	LVDS/HSTL (MAX9392) or LVPECL/CML (MAX9393) Noninverting Input. An internal 128k Ω resistor to V _{CC} pulls the input high when unconnected (MAX9392). An internal 68k Ω resistor to GND pulls the input low when unconnected (MAX9393).
27	$\overline{\text{INA0}}$	LVDS/HSTL (MAX9392) or LVPECL/CML (MAX9393) Inverting Input. An internal 128k Ω resistor to V _{CC} pulls the input high when unconnected (MAX9392). An internal 68k Ω resistor to GND pulls the input low when unconnected (MAX9393).
28	ASEL0	Input Select for A0 Output. Selects the differential input to reproduce at the A0 differential outputs. Connect ASEL0 to GND or leave open to select the INA0 ($\overline{\text{INA0}}$) set of inputs. Connect ASEL0 to V _{CC} to select the INA1 ($\overline{\text{INA1}}$) set of inputs. An internal 435k Ω resistor pulls ASEL0 low when unconnected.
30	INA1	LVDS/HSTL (MAX9392) or LVPECL/CML (MAX9393) Noninverting Input. An internal 128k Ω resistor to V _{CC} pulls the input high when unconnected (MAX9392). An internal 68k Ω resistor to GND pulls the input low when unconnected (MAX9393).
31	$\overline{\text{INA1}}$	LVDS/HSTL (MAX9392) or LVPECL/CML (MAX9393) Inverting Input. An internal 128k Ω resistor to V _{CC} pulls the input high when unconnected (MAX9392). An internal 68k Ω resistor to GND pulls the input low when unconnected (MAX9393).
32	ASEL1	Input Select for A1 Output. Selects the differential input to reproduce at the A1 differential outputs. Connect ASEL1 to GND or leave open to select the INA0 ($\overline{\text{INA0}}$) set of inputs. Connect ASEL1 to V _{CC} to select the INA1 ($\overline{\text{INA1}}$) set of inputs. An internal 435k Ω resistor pulls ASEL1 low when unconnected.

Detailed Description

The LVDS interface standard provides a signaling method for point-to-point communication over a controlled-impedance medium as defined by the ANSI TIA/EIA-644 standard. LVDS utilizes a lower voltage swing than other communication standards, achieving higher data rates with reduced power consumption, while reducing EMI emissions and system susceptibility to noise.

The MAX9392/MAX9393 1.5GHz dual 2 x 2 crosspoint switches optimize high-speed, low-power, point-to-point interfaces. The MAX9392 accepts LVDS and HSTL signals, while the MAX9393 accepts LVPECL and CML signals. Both devices route the input signals to either or both LVDS outputs.

When configured as a 1:2 splitter, the outputs repeat the selected inputs. This configuration creates copies of signals for protection switching. When configured as a repeater, the device operates as a two-channel buffer. Repeating restores signal amplitude, allowing isolation of media segments or longer media drive. When configured as a 2:1 mux, select primary or backup signals to provide a protection-switched, fault-tolerant application.

Input Fail-Safe

The differential inputs of the MAX9392/MAX9393 possess internal fail-safe protection. Fail-safe circuitry forces the outputs to a differential low condition for undriven inputs or when the common-mode voltage exceeds the specified range. The MAX9392 provides high-level input fail-safe detection for LVDS, HSTL, and other GND-referenced differential inputs. The MAX9393 provides low-level input fail-safe detection for LVPECL, CML, and other VCC-referenced differential inputs.

Figure 7. Programmable Configurations

Select Function

The $_SEL_$ logic inputs control the input and output signal connections. Two logic inputs control the signal routing for each channel. $_SEL0$ and $_SEL1$ allow the devices to be configured as a differential crosspoint switch, 2:1 mux, dual repeater, or 1:2 splitter (Figure 7). See Table 1 for mode-selection settings (insert A or B for the $_$). Channels A and B possess separate select inputs, allowing different configurations for each channel.

Enable Function

The $EN_$ logic inputs enable and disable each set of differential outputs. Connect EN_0 to VCC to enable the OUT_0/OUT_0 differential output pair. Connect EN_0 to GND to disable the OUT_0/OUT_0 differential output pair. The differential output pairs assert to a differential low condition when disabled.

Anything-to-LVDS Dual 2 x 2 Crosspoint Switches

Table 1. Input/Output Function Table

_SEL0	_SEL1	OUT_0 / $\overline{\text{OUT}}_0$	OUT_1 / $\overline{\text{OUT}}_1$	MODE
0	0	IN_0 / $\overline{\text{IN}}_0$	IN_0 / $\overline{\text{IN}}_0$	1:2 splitter
0	1	IN_0 / $\overline{\text{IN}}_0$	IN_1 / $\overline{\text{IN}}_1$	Repeater

1	1	IN_1 / $\overline{\text{IN}}_1$	IN_1 / $\overline{\text{IN}}_1$	1:2 splitter

Applications Information

Differential Inputs

The MAX9392/MAX9393 inputs accept any differential signaling standard within the specified common-mode voltage range. The fail-safe feature detects common-mode input signal levels and generates a differential output low condition for undriven inputs or when the common-mode voltage exceeds the specified range. Leave unused inputs unconnected or connect to VCC for the MAX9392 or to GND for the MAX9393.

Differential Outputs

The output common-mode voltage is not properly established if the LVDS output is higher than 0.6V when the supply voltage is ramping up at power-on. This condition can occur when an LVDS output drives an LVDS input on the same chip. To avoid this situation for the MAX9392/MAX9393, connect a 10k Ω resistor from the noninverting output (OUT₊) to ground, and connect a 10k Ω resistor from the inverting output (OUT₋) to ground. These pulldown resistors keep the output below 0.6V when the supply is ramping up (Figure 8).

Expanding the Number of LVDS Output Ports

Cascade devices to make larger switches. Consider the total propagation delay and total jitter when determining the maximum allowable switch size.

Power-Supply Bypassing

Bypass each VCC to GND with high-frequency surface-mount ceramic 0.1 μ F and 0.01 μ F capacitors in parallel as close to the device as possible. Install the 0.01 μ F capacitor closest to the device.

Differential Traces

Input and output trace characteristics affect the performance of the MAX9392/MAX9393. Connect each input and output to a 50 Ω characteristic impedance trace. Maintain the distance between differential traces and eliminate sharp corners to avoid discontinuities in differential impedance and maximize common-mode noise immunity. Minimize the number of vias on the differential input and output traces to prevent impedance

discontinuities. Reduce reflections by maintaining the 50 Ω characteristic impedance through connectors and across cables. Minimize skew by matching the electrical length of the traces.

Output Termination

Terminate LVDS outputs with a 100 Ω resistor between the differential outputs at the receiver inputs. LVDS outputs require 100 Ω termination for proper operation.

Ensure that the output currents do not exceed the current limits specified in the *Absolute Maximum Ratings*. Observe the total thermal limits of the MAX9392/MAX9393 under all operating conditions.

Cables and Connectors

Use matched differential impedance for transmission media. Use cables and connectors with matched differential impedance to minimize impedance discontinuities. Avoid the use of unbalanced cables. Balanced cables such as twisted pair offer superior signal quality and tend to generate less EMI due to canceling effects.

Board Layout

Use a four-layer printed circuit (PC) board providing separate signal, power, and ground planes for high-speed signaling applications. Bypass VCC to GND as close to the device as possible. Install termination resistors as close to receiver inputs as possible. Match the electrical length of the differential traces to minimize signal skew.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
